For Tree and Hedge Seeds, see Page 49.

For Terms of Vegetable and Flower Seeds, see Page 82.

SUPPLEMENT,

Including novelties of this year and varieties worthy of especial mention of recent introduction.

We take the greatest pains to assure ourselves by thorough trial on our Trial Grounds or Seed Farms and from inspections of growing crops in the hands of others, that every novelty that originates with us, or others, has sterling merit and can be depended on to give satisfactory results under favorable conditions before it can find a place in our catalogue. We urge you, therefore, to give the varieties offered in this list careful trial and feel confident that you will be more than satisfied with the results.

BEANS—DWARF.

See pages 9-11.

CHALLENGE DWARF BLACK WAX, Extra Early.

THE EARLIEST. FURNISHES THE LARGEST PICKINGS THE EARLIEST.

As much of an advance in earliness over existing varieties of wax beans as was our Golden Wax when we introduced it in 1876.

We have examined field after field of it over a wide extent of territory and on many varieties of soil, year after year, and have in every instance found it as well adapted to different conditions of soil and culture as the Prolific Black Wax.

These facts of hardiness and prolificness, together with its great earliness, make it indispensable to market gardeners and every one to whom earliness is any object at all. Plant largely of it this year; it will pay you.

Per packet, 15c.; pint, 25c.; quart, 40c.; 4 quarts, \$1.50; bushel, \$8.00.

If by mail or express prepaid, 10 cents per pint, 15 cents per quart, must be added for charges.

SPECKLED WAX.

The best bean to follow Golden Wax, or Prolific Black Wax. If you want to plant one variety to use for snaps, green shelled and in the dry state, plant this, because this is the best general crop bean.

Its long, cylindrical, waxy yellow, fleshy, stringless, delicately flavored pods are fit for use directly after the above named sorts, and continue in bearing the longest of any. When the pods get too mature for snaps they become beautifully splashed and streaked with crimson, making them remarkably handsome, and at this stage the beans are fit to eat shelled. The Dwarf Horticultural has always been the standard of excellence as a green shelled bean, but we can assure our patrons that the Speckled Wax is fully equal to or even better than Dwarf Horticultural in this particular, while in hardness of vine and quantity of yield, it is better beyond all comparison.

After years of trial and careful watching we assert the above points of superiority for this variety and we know that a single, careful planting will convince anyone that its merits are not in the least overstated.

Per packet, 10c.; pint, 25c.; quart, 35c.; 4 quarts, \$1.25; bushel, \$6.50.

If by mail or express prepaid, 10 cents per pint, 15 cents per quart, must be added for charges.

SPECKLED WAX.

GOLDEN-EYED WAX.

EXTREMELY HARDY, FREE FROM RUST AND UNRIVALED
FOR SHIPPERS.

This is as early as Golden Wax; has long golden-yellow pods that are fairly fleshy and stringless, of good quality and remain in condition for use as long as any.

SOUTHERN GROWERS FOR NORTHERN MARKETS

will do well to plant largely of this variety, as it cannot fail to give entire satisfaction.

Per packet, 10c.; pint, 25c.; quart, 35c.; 4 quarts, \$1.25; bushel, \$6.50.

If by mail or express prepaid, 10 cents per pint, 15 cents per quart, must be added for charges.

EXTRA EARLY REFUGEE.

The earliest green podded snap bean. In many localities it is planted more largely than any other by market gardeners for their crop of early green podded beans.

Has the good qualities of the old Refugee, but is two to three weeks earlier. Will furnish a picking as early as our Golden Wax.

Per packet, 10c.; pint, 15c.; quart, 25c.; 4 quarts, 75c.; bushel, \$5.00.

If by mail or express prepaid, 10 cents per pint, 15 cents per quart, must be added for charges.

EXTRA EARLY REFUGEE.

Early Yellow Six Weeks, Improved Round Pod.

The old Yellow Kidney Six Weeks while early and a desirable bean, has very thin pods, which do not keep in condition for use long; whereas this variety has a medium length, almost cylindrical, very fleshy pod, which remains in condition for use a very long time. It is also fully a week earlier than ordinary Six Weeks, thus making it a desirable sort for early market use.

Per packet, 10c.; pint, 20c.; quart, 30c.; 4 quarts, \$1.00; bushel, \$6.00.

If by mail or express prepaid, 10 cents per pint, 15 cents per quart, must be added for charges.

GODDARD, OR BOSTON FAVORITE.

Differs from Dwarf Horticultural in having larger growing, more vigorous vines, with much larger, brighter colored pods, and with beans when fit to eat green shelled, almost or quite as large as the large Lima, and of as good flavor. A favorite variety among gardeners in many localities in the East and worthy a place in every garden.

Per packet, 10c.; pint, 20c.; quart, 30c.; 4 quarts, \$1.00; bushel, \$6.00.

If by mail or express prepaid, 10 cents per pint, 15 cents per quart, must be added for charges.

BEANS--Pole.

See pages 11-13.

BROCTON POLE.

After the style of Horticultural Pole, but vines are much more vigorous and productive, while the pods and beans are much larger. Undoubtedly the most handsome and the best of this type of pole beans.

Per packet, 10c.; pint, 25c.; quart, 40c.; 4 quarts, \$1.50; bushel, \$8.00. If by mail or express prepaid, 10 cents per pint, 15 cents per quart, must be added for charges.

BROCTON POLE.

CHALLENGER LIMA.

Especially valuable for growers in the South, as it is more certain to make a crop there than any other variety of the true Lima. Its hardiness and great productiveness, together with its sure cropping habit, make it one of the very best Limas wherever this class of beans can be grown.

Per packet, 10c.; pint, 25c.; quart, 40c.; 4 quarts, \$1.50; bushel, \$8.00. If by mail or express prepaid, 10 cents per pint, 15 cents per quart, must be added for charges.

BEET, D. M. FERRY & CO'S

Detroit Dark Red Turnip

DETROIT DARK RED TURNIP.

NEW, And the best Turnip Beet. Has the smallest and most uniformly upright tops, the most

PERFECTLY SHAPED

and strongest colored roots of the very best quality. No Beet in cultivation is more

ATTRACTIVE IN APPEARANCE when bunched for market, and none will give more Entire Satisfaction to both grower and consumer.

Per packet, 10c.; oz., 15c.; 2 oz., 25c.; ¼ lb., 40c.; 1 lb., \$1.50.

See colored plate.

EDMAND'S EARLY BLOOD TURNIP

Does not make roots fit for use as early as our Detroit Dark Red Turnip described above and the tops are more spreading and larger, but is a great favorite in many localities and is one of the best of the Turnip Beets. Our stock cannot be surpassed.

Per packet, 5c.; oz., 10c.; 2 oz., 15c.; ¼ lb., 25c.; 1 lb., 75c.

D. M. FERRY & CO'S HALF LONG BLOOD

Introduced by us in 1890 and is the best Beet in every way for winter use. Why plant the old long varieties, when one as good in every other respect and not over one-half the trouble to harvest can be had.

Per packet, 10c.; oz., 15c.; 2 oz., 25c.; ¼ lb., 40c.; 1 lb., \$1.50.

CABBAGE.

See pages 15-17.

BRIDGEPORT LATE DRUMHEAD.

A sub-variety of the Drumhead Cabbage much sought after in some localities because of its large, solid heads, which stand shipping remarkably well.

Per packet, 5c.; oz., 40c.; 2 oz., 75c.; $\frac{1}{4}$ lb., \$1.25; 1 lb., \$4.00.

MAMMOTH ROCK RED.

Almost every plant will make a head, larger, solid, of better color, and that will keep better than any other variety of Red Cabbage. Lose no time and money experimenting; we do that, but buy your entire stock of this variety and buy it of us.

Per packet, 10c.; oz., 60c.; 2 oz., \$1.00; $\frac{1}{4}$ lb., \$1.75; 1 lb., \$6.00.

MAMMOTH ROCK RED.

IMPROVED AMERICAN SAVOY.

IMPROVED AMERICAN SAVOY.

Has much of the delicacy of flavor of the Cauliflower and needs only a trial to become a favorite.

Per packet, 5c.; oz., 20c.; 2 oz., 35c.; $\frac{1}{4}$ lb., 60c.; 1 lb., \$2.00.

CARROT.

See pages 17-19.

CHANTENAY.

The roots are usable so young that this variety is forced under glass largely in some localities, while it grows large and keeps as well as the Danvers or Long Orange.

Per packet, 5c.; oz., 10c.; 2 oz., 15c.; $\frac{1}{4}$ lb., 25c.; 1 lb., \$1.00.

D. M. FERRY & CO'S IMPROVED SHORT WHITE.

Will yield a larger bulk of smooth, finely shaped and flavored roots that are

EASIER TO HARVEST

than any other variety of White Carrot. Plant but one variety and plant this.

Per packet, 5c.; oz., 10c.; 2 oz., 15c.; $\frac{1}{4}$ lb., 25c.; 1 lb., \$1.00.

D. M. FERRY & CO'S IMPROVED SHORT WHITE.

SWEET CORN.

See pages 21-23.

WHITE COB CORY.

NEW. DISTINCT.

Has all the good qualities of the ordinary Cory and also a lighter grain and a large proportion of the ears with white cobs, making it the best large eared extra early sweet corn. See colored plate.

Per packet, 20c.; pint, 30c.; quart, 50c.; 4 quarts, \$1.50; bushel, \$8.00.

If by mail or express prepaid, 10 cents per pint, 15 cents per quart, must be added for charges.

TILTON'S WHITE STAR.

NORTHERN PEDIGREE.

Our stock has a larger and more perfect ear than is usually found in this variety, and is the earliest sweet corn and the best for the home garden.

Per packet, 10c.; pint, 15c.; quart, 25c.; 4 quarts, 75c.; bushel, \$5.00.

If by mail or express prepaid, 10 cents per pint, 15 cents per quart, must be added for charges.

LETTUCE.

See pages 27-28.

TILTON'S

White Star.

See colored plate.

Will commend itself to every market gardener because of its

VERY LARGE, LOOSE HEADS, OF EXCELLENT FLAVOR,

which keep extremely well and show to splendid advantage on the market stand. A remarkably good variety for forcing under glass and for early planting in the open ground.

Per packet, 10c.; oz., 30c.; 2 oz., 55c.; ¼ lb., \$1.00; 1 lb., \$3.00.

GRAND RAPIDS.

WE ARE HEADQUARTERS

FOR

PURE AND RELIABLE STOCK

Of this favorite forcing variety. So

BUY YOUR SEED OF US.

Per packet, 10c.; oz., 20c.; 2 oz., 35c.; ¼ lb., 60c.; 1 lb., \$2.00.

EARLY WHITE

SELF FOLDING COS.

Distinct from and an improvement on ordinary Cos Lettuce, in that it forms a head which folds so closely as not

TO NEED TYING UP

In order to blanch it. Try This.

Per packet, 10c.; oz., 25c.; 2 oz., 40c.; ¼ lb., 75c.; 1 lb., \$2.50.

GRAND RAPIDS.

WATER MELON.

See pages 30-31.

DIXIE.

We offer this Splendid Variety as the

BEST FLAVORED

and most free from stringiness of any shipping Melon, and even now it is

MORE SOUGHT AFTER THAN ALL OTHERS

in the Eastern markets. Our stock is grown from the

BEST SEED

obtainable, and will be found

EQUAL TO ANY.

Per packet, 10c.; oz., 15c.; 3 oz., 25c.;
¼ lb., 40c.; 1 lb., \$1.50.

ONION.

See pages 31-33.

MICHIGAN YELLOW GLOBE.

Through unavoidable circumstances we were unable to offer seed of this splendid variety in any quantity last season but this year we are fairly well supplied with a fine stock grown on our own Greenfield Seed Farms.

WE SPEAK ADVISEDLY WHEN WE SAY THIS IS THE
FINEST SHAPED, BEST COLORED AND LARGEST CROPPER
OF ANY OF THE YELLOW GLOBE ONIONS.

Our own large plantings for seed and the large fields we have seen growing for market have fully demonstrated this. Wherever we have sold it, either in large or small quantities, it has given unbounded satisfaction, and we cannot urge you too strongly to plant largely of it for this year's crop.

Per packet, 5c.; oz., 30c.; 2 oz., 55c.; ¼ lb., \$1.00; 1 lb., \$3.00.

PEA, MELTING SUGAR.

PEAS.

See pages 34-36.

MELTING SUGAR.

A new variety of the edible podded class of garden Peas and is superior to any other in prolificness, the pods being borne in pairs in the greatest profusion. The pods are large, straight, smooth, perfectly stringless and of the most delicious flavor.

You cannot afford to plant any other variety of Edible Podded Peas, because this is

**THE MOST PROLIFIC,
THE MOST TENDER, AND
THE BEST FLAVORED.**

Per packet, 15c.; pint, 25c.; quart, 40c.; 4 quarts, \$1.50; bushel, \$8.00.

If by mail or express prepaid, 10 cents per pint, 15 cents per quart, must be added for charges.

RADISH.

See pages 37-39.

LONG BRIGHTEST SCARLET, WHITE TIPPED.

In no vegetable is **ATTRACTIVENESS** more of a feature than in the Radish.

SMALL TOPS, UNIFORMLY SMOOTH AND WELL FORMED ROOTS,

together with a **Bright and Striking Color** produce this effect. We think this variety combines these qualities in a higher degree than any other and will eventually supersede all other long kinds of its season. See colored plate.

Per packet, 3c.; oz., 10c.; 2 oz., 15c.; ¼ lb., 25c.; 1 lb., \$1.00.

Non Plus Ultra, or Early Deep Scarlet Turnip, Forcing.

For those markets that demand a Turnip Radish, for forcing, having a **Rich, Deep Scarlet Color**, this is unquestionably the best. Its remarkably small tops and uniformly

SMOOTH, FINE COLORED ROOTS,

together with the quickness of its growth, leave little to be desired in the way of a perfect Radish of this class.

Per packet, 5c.; oz., 10c.; 2 oz., 15c.; ¼ lb., 25c.; 1 lb., 80c.

Early Scarlet Turnip, White Tipped, Forcing.

As early and having as small tops and smooth roots as Non Plus Ultra, but the roots are

BRIGHT SCARLET WITH A WHITE TIP,

MAKING AN

EXCEEDINGLY HANDSOME

Radish. This is already a favorite sort in many markets and needs only to be known to become a general favorite.

Per packet, 5c.; oz., 10c.; 2 oz., 15c.; ¼ lb., 25c.; 1 lb., 80c.

EARLY SCARLET TURNIP, WHITE TIPPED, FORCING.

SQUASH.

See pages 41-42.

MAMMOTH SUMMER CROOKNECK.

See colored plate.

This splendid new Squash combines earliness, size and warty-ness in such a degree as to make it the most desirable Summer Squash and one which no gardener can afford to be without.

Per packet, 10c.; oz., 50c.; 2 oz., 85c.; $\frac{1}{4}$ lb., \$1.50; 1 lb., \$5.00.

MAMMOTH SUMMER CROOKNECK.

TOMATO.

See pages 43-45.

EARLY MICHIGAN, OR EARLY RED APPLE.

See colored plate.

For general family, market or canners' use, the Early Michigan

Has No Superior Among Red Fruited Tomatoes.

Our patrons who have had this under the name of Early Red Apple will want to bear in mind that the change in name does not mean any change in stock. They will find it to be as it always has been, **ONE OF THE BEST.**

Per packet, 5c.; oz., 30c.; 2 oz., 55c.; $\frac{1}{4}$ lb., \$1.00; 1 lb., \$3.00.

EARLY MICHIGAN, OR EARLY RED APPLE, NATURAL SIZE.

ATLANTIC PRIZE.

What has been lacking heretofore in the very early Tomatoes was size and smoothness. If you will plant liberally of this variety you will be speedily convinced that the lack no longer exists, for it is as smooth and large as three-fourths of the general crop Tomatoes now offered, and will ripen you a large picking the earliest of any Tomato now known.

Our stock is selected with great care.

Per packet, 5c.; oz., 30c.; 2 oz., 55c.; ¼ lb., \$1.00; 1 lb., \$3.00.

ATLANTIC PRIZE. ONE-THIRD NATURAL SIZE.

IGNOTUM.

IGNOTUM.

With good seed and under favorable conditions we think there is no large red Tomato that will give so general satisfaction as this. There is, however, much inferior seed being offered which is doing much to bring the variety into disrepute. We get our first seed from original sources and have been selecting it carefully for three years and believe it to be as good as any now offered. To all our patrons our advice is, try it.

Per packet, 10c.; oz., 30c.; 2 oz., 55c.; ¼ lb., \$1.00; 1 lb., \$3.00.

DWARF CHAMPION.

A very smooth pink or purple fruited variety, making bushy plants which require little or no staking, and on this account may be

DWARF CHAMPION.

grown with less trouble than almost any other sort. Grown quite extensively for market in some localities.

Per packet, 10c.; oz., 30c.; 2 oz., 55c.; ¼ lb., \$1.00; 1 lb., \$3.00.

MONARCH OR TANKARD. RUTA BAGA.

MONARCH OR TANKARD Ruta Baga.

See page 47.

The relatively small tops, short necks and large, smooth, richly colored roots growing well out of the ground make this one of the very best varieties to grow in quantity. You will do well to use this for all your crop, because in quantity and quality of yield and the ease with which it may be harvested, it has no superior.

Per packet, 10c.; oz., 15c.; 2 oz., 25c.; ¼ lb., 40c.; 1 lb., \$1.50.

FLOWERS.

See pages 52-80.

VERNON BEGONIA.

(*BEGONIA SEMPERFLORENS ATROPURPUREA.*)

This new and distinct variety of the *semperflorens* class is altogether the best that has been yet produced. The plant grows to a medium size; is of compact habit, very hardy and easily grown either in the house or open ground. The foliage is a glossy green color and the flowers rich brilliant red and borne in the greatest abundance. A well grown plant in a pot is one of the best ornaments to a conservatory or parlor, while a large bed of them in the garden will be the admiration and delight of all beholders.

Price, per packet, 50 cents.

Crozy's Hybrid Cannas.

This magnificent race of dwarf large flowering Cannas has become as essential a feature of garden or lawn decoration as is the Gladiolus, with which they vie in the richness and variety of color, size and profusion of their bloom. The seed we offer is American grown and saved from the finest collection of named varieties.

Price, per packet, 15 cents; per oz., \$1.00.

CROZY'S HYBRID CANNAS.

MARGUERITE CARNATION.

We confess to being somewhat skeptical when the introducers of this wonderful new Carnation asserted that it was perfectly easy to have plants of it in flower in from four to five months from the sowing of the seed. However we made a sowing in our greenhouses at our Trial Grounds, February 23, of the current year and gave the plants only ordinary care; transplanted them to the open ground the last of May and had them in flower July 19th, just nineteen weeks from time of sowing the seed, and we have no doubt but that by vigorous pushing this record could have been reduced by two weeks. The plants flowered profusely until after hard frosts, when they were removed to the greenhouses and are in bloom yet. Fully eighty per cent. of the plants grown from seed will have double flowers with as great a variety of color and as rich fragrance as the common greenhouse Carnation, while the enormous reduction in the time between the sowing of the seed and flowering makes it really one of the most valuable novelties in flowers of recent years. For those amateurs and florists who are not specially successful in growing Carnations from cuttings, the ability to get vigorous and profuse blooming seedlings in four to five months from seed is a fact of the greatest importance and needs only to be known to be taken advantage of.

Price, per packet, 25 cents.

AMERICAN LOTUS—(*Nelumbium luteum.*)

This magnificent native water lily is but very little different from the Egyptian Lotus, except in the color of the flowers, which are yellow. No water plant will give a more tropical aspect than this. The massive leaves, two or more feet in diameter, raised on leaf stalks five to six feet in height, the whole surmounted by the enormously large, fragrant, rich yellow flowers, present a sight of which the eye never wearies. Have you a lake, a carp pond, a tank or barrel sunk in the ground? If so, buy a packet of the seed from us and prove our statements for yourself. It is perfectly hardy and will flower the first year from seed if properly grown. Price, per packet, 25 cents.

FARM AND GARDEN TOOLS.

This very complete line of Tools is popular, and quite deservedly so. They are reliable and accurate, and do not get out of order. Send for 1892 Illustrated, Descriptive Catalogues. Free.

THE "PLANET JR." HILL DROPPING GARDEN DRILL.

This Drill will sow in hills with perfect accuracy as well as in rows. It will sow all kinds of garden seeds from Peas and Beans down to Celery. It opens, sows, covers, rolls down and marks the next row, all at one operation. The machine holds two quarts and is adapted for all conditions of land, working especially well in fresh ground or when planting on a ridge, as it has two 15-inch driving wheels placed six inches apart. This construction insures that the furrow for the seed will be opened at an even depth, and also that the covering will be regular, the plows being adjustable and not interfered with by the wheel track.

Other Drills having an upright seed hopper and a discharge hole in the bottom, invariably sow varying amounts of seed as the hopper is full, half-full or nearly empty. This machine, however, has a force feed in the shape of a pure rubber double screw which works directly over a diamond-shaped hole in the bottom of the hopper, and a metal shield regulates the feeding of the contents of the hopper to the screw, so that it runs free and discharges in the most regular manner, whether full or containing only a single paper of seed.

The Drill is set for the different seeds with the greatest accuracy by a neat thumb-screw which regulates the flow by means of a rod connecting the seed index or dial with the discharge opening. This dial contains the names of all the principal seeds, and is placed at the top of the right handle, in plain sight and within easy reach. To sow any particular seed it is only necessary to move the index finger (by the thumb screw) till opposite the name of the seed to be sown.

Price, boxed and delivered at Depot or Express Office in Detroit, Mich., \$11.00. We can also supply a special flow attachment for sowing onion seeds for sets, which will open several shallow furrows side by side, making a band of plants about four inches wide. This attachment is an extra. **Price, 50 cents.**

"PLANET JR." SINGLE CELERY HILLER.

Absolutely indispensable to celery growers. Single machine works but one side at a time, and throws further and higher than the double, and is adapted to all width rows, from two feet to ten. It also has the leaf lifter and lever expander. It is the more satisfactory for the last and highest hilling, and large growers need both. The single machine is also often used where the rows are so close together that there is not enough earth to complete hilling up both rows at once. The Single Hiller is then used to hill very high every other row, taking away most of the earth from the alternate rows. Then when the blanched row is marketed it is again used to hill up the remaining row. It is also used to bank up celery when storing in trenches for winter. **Price, boxed and delivered at Depot or Express Office in Detroit, Mich., \$9.00.**

"PLANET JR." MARKET GARDENER'S HORSE HOE AND PULVERIZER.

An admirable tool for very fine close level culture of market garden and field crops. A 12-inch sweep, two hoes cutting 10 inches each and 25-inch pulverizer. At a single passage it works all rows from 18 to 32 inches. The hoes may be exchanged from one side to the other, and the pulverizer may be reduced for narrow rows. The '92 lever wheel is easily and quickly adjusted to give any depth required. It is precisely what is wanted for the work of the market garden. The flat sweeps and slender hoes pass easily beneath the surface, cutting off all weeds and grass, and leaving the ground almost exactly where it was before, and the pulverizer then reduces the surface to the finest condition, and completely destroys all weed growth. **Price, complete, boxed and delivered at Depot or Express Office in Detroit, Mich., \$9.50; without Pulverizer, \$7.50.**

"Planet Jr." Twelve Tooth Harrow, Cultivator and Pulverizer.

For fine cultivation, either deep or shallow, this tool has no equal. The recurved throat and high frame prevents clogging, and the reverse position given to the teeth in a short time by the changing of a single bolt in each. It is provided with a new '92 lever wheel, used to regulate the depth with exactness, and also pulverizer, which leaves the ground in the finest condition. The pulverizer is controlled by a lever, which can be operated in an instant by the foot while in motion. The pulverizer may be reduced in width by taking off the outside teeth, and the tool may be used to straddle a row, cultivating both sides at once. As a harrow the work done is most perfect. **Price, complete, boxed and delivered at Depot or Express Office in Detroit, Mich., \$9.25; without Pulverizer, \$7.50.**

THE "PLANET JR." COMBINED HILL DROPPING SEED AND FERTILIZER DRILL.

For several years there has been a pressing demand, especially by market gardeners and onion growers, for a

machine which would not only do all that the machine just described will do, but at the same time sow fertilizers either above or below the seed as wanted and in any quantity necessary. The machine shown in this cut does this work perfectly. It works with entire regularity whether there is much or little in the drill, and small heaps do not interfere with its regular sowing. It holds about one peck. The plows can be set to place the fertilizer either above or below the seed. The amount sown is regulated accurately by an index similar to that of the hill dropper, and the discharge of both drills may be cut off or started instantly, either separately or together, thus avoiding all loss at the end of the row. This also has a force feed; a double acting open metal worm discharging regularly; it is protected by metal feeding shelves, which move slightly and alternately with each revolution of the screw, supplying material to it with great regularity and preventing clogging in the hopper. Like the Plain Hill Dropping Drill, it does not sow when drawn backward, and can be quickly thrown entirely out of gear. This machine will be a great boon to farmers and market gardeners.

Price, boxed and delivered at Depot or Express Office in Detroit, Mich., \$16.00.

THE "PLANET JR." NO. 2 SEED DRILL.

Sows all garden seeds accurately at any desired thickness or depth, opening, dropping, covering, rolling down and marking the next row all at one passage in the most perfect and reliable manner. It holds 2½ quarts. It has no cams, levers, brushes, cogs, springs or shakers to get out of order; it is noiseless, automatic, self-cleaning and accurate; it is remarkable for simplicity, strength and for ease and perfection of work in the field. No one having use for a Seed Drill can afford to buy any other; it is the best.

Price, boxed and delivered at Depot or Express Office in Detroit, Mich., \$7.50.

Truckers, market gardeners, onion growers and all who raise vegetables in quantity should supply themselves also with the "Planet Jr." Double Wheel Hoe. (Described below).

THE "PLANET JR." COMBINED DRILL, WHEEL HOE, CULTIVATOR, RAKE AND PLOW.

This tool is unrivaled in beauty of design, perfection of finish, convenience and capacity for work; it is suitable for either the farm or the garden. As a Seed Drill it is the same as the No. 2 (see description above), except in size. It holds one quart. For after-care of the crop it is supplied with a pair of rakes, a pair of long hoes, three reversible cultivator teeth and a large garden plow. As a rake,

it is invaluable in preparing the garden for planting, and also for delicate after-cultivation of the crop and for covering seeds, etc., etc. As a hoe, it works SAFELY and CLOSELY both sides of the row at once when plants are small; when plants are large, working all rows up to 16 inches wide at one passage. As a plow, it opens furrows, covers them, hills, plows to and from, and from, work usually needed in

etc. As a cultivator, it is admirably adapted to deep mellowing of the soil. All the blades are tempered and polished steel. The different tools in this combination comprise all that are necessary for the greatest variety of the hand cultivation of farm or garden crops, and are particularly useful for all sown by a seed drill.

Price, boxed and delivered at Depot or Express Office in Detroit, Mich., \$9.50.

THE "FIRE-FLY" WHEEL GARDEN PLOW.

Makes the care of a vegetable garden a pleasure, and 10,000 families who could not find time to keep a garden if attempting cultivation with the ordinary hand hoe can raise their own vegetables successfully with the "Fire-Fly." It takes the place of the horse and plow, or cultivator, requiring no wide headlands to turn on and is invaluable during all the gardening season. **Price, boxed and delivered at the Depot or Express Office in Detroit, Mich., \$2.35.**

The "Planet Jr." Double Wheel Hoe, Cultivator, Rake and Plow.

This very popular tool has been *completely remodeled*; is greatly simplified, strengthened, improved, and merits the

thorough admiration of every practical gardener. Each tool is sent out with a pair of rakes, a pair of hoes, four cultivator teeth and a pair of plows. The wheels are adjustable in height, and the arch is 14 inches high, thus enabling the operator to work both sides of the row at once, unless the plants grow over 18 inches high; then the wheels can be set to run close together and the tool used between the rows. Leaf guards (detachable), go with each machine, to be used when plants extend into a wide row. This tool is light, very simple, made of the best material and highly finished, and nothing can exceed the perfection and variety of work it performs.

Price, boxed and delivered at Depot or Express Office in Detroit, Mich., \$6.50.

PLAIN DOUBLE WHEEL HOE.

To meet a demand from some sections of the country, we offer the "Planet Jr." Double Wheel Hoe, just described, with only one pair of Hoes, and without leaf guards, under the name of "Planet Jr." Plain Double Wheel Hoe. This will make a very effective and cheap tool for parties who have limited work.

Price, boxed and delivered at Depot or Express Office in Detroit, Mich., \$4.00.

"PLANET JR."

Single Wheel Hoe, Cultivator, Rake and Plow.

In improving this tool care has been taken to combine extreme lightness, strength, variety of tools, and great adjustability. It has one pair of long hoes, a pair of rakes, a pair of four-inch sweeps, one broad cultivating tooth, a steel garden plow, and one detachable leaf guard. All the blades are tempered and polished steel. This tool is pronounced by practical men as without an equal in beauty of design and finish, ease of operation, quality of work and variety of adjustment, and in this improved form is, unquestionably, the lightest running, the most convenient and practical Single Wheel Hoe known.

The form of the blades has proved superior to all other shapes, insuring a forward slanting cut next to the plants and consequent close work without danger, and at the same time thorough cultivation of the soil. The cultivator teeth, in combination with the hoes, enable the operator to perform almost every variety of work, either in the field or garden. All rows, from six to eighteen inches apart, can be perfectly hoed at one passage. The frame allows every desirable adjustment, is quickly raised or lowered to regulate depth, and the wheel can be attached centrally or to either side of the machine, giving the operator the important advantage of hoeing both sides of the row at one passage when desired.

Price, boxed and delivered at Depot or Express Office in Detroit, Mich., \$5.00.

The "Fire-Flly" Single Wheel Hoe, Cultivator and Plow.

This convenient tool has rapidly convinced practical gardeners of its high merits. It is also remodeled, and has the broad-

face wheel. It combines lightness and strength with the greatest adjustability, while its highly polished and tempered steel tools make gardening comparatively a pleasure. The tools are all made after the most perfect models, and are, first, a pair of admirable hoes, which can be set to work to or from the row and to any desired depth. Next, a set of three reversible cultivator teeth, to be used together or singly or in conjunction with the hoes. Third, and capable of standing hard

a large, excellent garden plow. The whole tool is light and strong, attractive in appearance, and capable of standing hard usage for years, while the price is its final recommendation.

Price, boxed and delivered at Depot or Express Office in Detroit, Mich., \$4.00.

THE "PLANET JR." ALL STEEL HORSE HOE AND CULTIVATOR COMBINED, WITH WHEEL.

No tool which has ever been offered to the American public has so rapidly gained in favor as the "PLANET JR." ALL STEEL HORSE HOE AND CULTIVATOR COMBINED. This is due to the fact that for the cultivation of all farm crops none equals it in ease of handling, variety and quality of work done, and lightness of draft. It is made entirely of iron and steel, except the handles; has a patent lever expanding frame which can be closed to five inches or opened to twenty-four; has a side adjustment for the handles, by which they may be set from one side to the other by loosening a single bolt; has a lever wheel by which it may be changed to any depth in an instant, and is provided with such a variety of adjustable teeth as enables it to do all kinds of one-horse cultivation. The front two teeth are three inches wide, and of such a form as is best adapted to enter the soil, cut off the roots of growing weeds, and turn them upside down, thus preparing for the easy working of the rear blades. The cultivator teeth can be set to work deep or shallow as desired. The patentside steels are five inches wide, and by means of the patent side standards can be turned at any angle desired, or completely reversed. This feature is found on the "Planet Jr." Horse Hoe alone. The rear steel is seven inches wide, and designed to fill in the furrows made by the side steels, leaving a finely shaped bed around the plants. The tool is also furnished with three extra cultivator steels which can be placed on the three rear standards when desired, thus making it a plain cultivator. All the standards now used on the "Planet Jr." Horse Hoe are made from heavy sheet steel, struck up into the proper shape by special machinery. These HOLLOW STEEL STANDARDS are far superior to anything ever before offered to the public, and are a distinguishing feature of the improved "Planet Jr." Horse Hoe.

Price, including Wheel, delivered at Depot or Express Office in Detroit, Mich., \$8.50. Without Wheel, delivered at Depot or Express Office in Detroit, Mich., \$8.00.

THE "PLANET JR." GRASS EDGER.

A cheap, handy and effective Grass Edger is a treasure, and here it is: one with which you can in an hour edge beautifully the walks and the flower and shrub beds of an ordinary half-acre lawn. Think of it: why, in the usual way it would take a day. This perfect little tool does either straight or curved work most accurately, edging at the desired angle and at the speed of a mile an hour. After all, the grand secret of attractiveness in out-of-door surroundings is extreme neatness; surrender that and the rest is in vain. The little "Planet Jr." Edger assists wonderfully in producing this indispensable effect. It will give more genuine pleasure and satisfaction for its moderate cost and the little time expended in its use, than the lawn mower. It should be a constant companion of the mower, and is invaluable in giving the last touch of neatness to the lawn, when the mower has done its best.

For heavy work the frame forms a pocket just the proper size to carry a brick, which gives the needed additional weight for effectual service.

Strawberry growers will find it also a rapid and perfect tool for cutting off surplus runners.

By removing the wheel, the hoe may be used alone with great satisfaction in the vegetable garden, first cutting away from the crop, and then returning the earth.

Price, boxed and delivered at Depot or Express Office in Detroit, Mich., \$3.50.

"GEM OF THE GARDEN"

HAND WHEEL HOE AND CULTIVATOR.

This implement is offered to gardeners and others with the assurance that it is the most effective and convenient tool of the kind yet invented. Its working parts are: two Scuffle or Cutting Blades, one 4½ and one 9 inches wide; two Plows, right and left hand; five Stirring Teeth; all made of best steel.

The wheels and handles of the "GEM" are both adjustable in height, while the frame is so slotted that the hoes, teeth and plows can be set in almost any position or angle. The Scuffle hoe makes a clean cut and is followed by the teeth—five or less—which thoroughly pulverize the soil, and drag out and expose to the sun the roots of the weeds cut by the hoe. In use, keep the tooth on the right, quite as far out as the end of the hoe, using it as a guard; being of such slender shape it will not throw dirt enough to cover small plants. The hoes of thin steel, and presenting nearly a straight line to the work, avoid the "dodging" so common to tools of this kind.

Price, boxed and delivered at Depot or Express Office in Detroit, Mich., \$4.50. Double Wheel Attachment for "Gem of the Garden," consisting of One Pair of Wheels and One Pair of Curved Hoes, \$1.75 extra.

THE WEED SLAYER.

In offering this tool we are confident from our experience with it that it is a very superior tool for use in the garden among onions, turnips, corn, potatoes, strawberries, etc., and for weeding among flowers and in gravel walks. It is light, weighing but 7 lbs.; strong, made of the best steel and iron; adjustable to any height of person, and cutting from one-half inch to one and one-half inches under ground and 7 inches wide.

Price, Packed and delivered at Depot or Express Office in Detroit, Mich., \$2.00. Three in one shipment, \$5.00.

MATTHEWS' GARDEN SEED DRILLS AND CULTIVATORS.

MATTHEWS' GARDEN SEED DRILL.

We know of no hand Garden Drill for sowing vegetable seeds, etc., which has met with more popularity than the Matthews Garden Seed Drill among market gardeners everywhere.

It is designed for use in field and garden. When in operation it opens the furrow, drops the seed accurately at the desired depth, covers it and lightly rolls the earth down over it, and at the same time marks the next row. It will sow Beet, Carrot, Onion, Turnip, Parsnip, Sage, Spinage, Sorghum, Peas, Beans, Fodder, Corn, Broom Corn, etc., with a certainty, regularity and rapidity, impossible for the most skilful hand.

A valuable feature in this Drill is its patent INDICATOR, with names of different seeds on it for adjusting the Drill to sow different kinds of seed, which is done by simply turning the Indicator until the name of the seed you want to sow comes to the top. The Drill is made of the best material throughout, and is complete in all its arrangements. Beware of cheap imitations of this Drill.

None genuine but those having the Patent Indicator. All Drills are now furnished with the new Seed Cut-off, so no seed is wasted in turning at ends of rows, and with improved markers.

Price, boxed and delivered at Depot or Express Office in Detroit, Mich., \$8.00.

MATTHEWS' IMPROVED DRILL, CULTIVATOR AND HOE COMBINED.

The Matthews' Drill, Cultivator and Hoe Combined has been greatly changed and improved. As a drill it now possesses all the features of the Matthews Garden Seed Drill of a smaller size. It has the same patent Indicator as that. The Cultivator attachment has also been greatly improved

by providing it with a new set of teeth of an improved pattern, with STEEL BLADES of the best quality, so that as a Cultivator it is now similar to the Matthews Improved Hand Cultivator. It also has with it a pair of superior style hoes with long steel blades which may be used in exchange with the cultivator teeth. The exchange may be quickly made and they are very easy to adjust. This is a decided improvement. This machine is very efficient.

either as a drill, cultivator or hoe, and will be found to be adapted to any kind of soil.

Price, boxed and delivered at Depot or Express Office in Detroit, Mich., \$10.00.

MATTHEWS' IMPROVED DRILL AND CULTIVATOR COMBINED. The above without the hoes, Price, boxed and delivered at the Depot or Express Office in Detroit, Mich., \$9.50.

ONION HOE.—To supply the demand for a tool exactly adapted to onion culture, we have placed in stock the **Crescent Scuffle Hoe**, which we consider equal to anything we have ever seen for the purpose. The shape of the blade makes it work rapidly, easily and with great efficiency. It cuts both backward and forward, and leaves the surface of the soil smooth. It is also useful for cutting runners from strawberry vines and trimming lawn edges.

Price, Hoe (with handle), delivered at express office in Detroit, Mich., **75 cents**, the purchaser paying express charges. Hoe (without handle), by mail, postage paid, **75 cents**.

GUY'S GERMAN PLANT FOOD.—For *Flowers, Foliage Plants, Palms, Ferns, Bulbs, etc.* Composed of nitrogen, ammonia and other chemicals essential to the growth of plants, producing a luxuriant growth and a generous bloom. Plants fed with it are not often troubled with insects. Put up in wooden boxes, with full directions for use. **Price**, small size box, for testing, by mail, postpaid, **15 cents**; larger sized box, containing five times the quantity, by mail, prepaid, **40 cents**.

EXCELSIOR WEEDING HOOK.

For weeding flower beds or vegetable gardens. It will work well among rows of seedlings, among ornamental plants, or in any place where freedom from weeds is desired. It removes the weeds with far greater rapidity than in the usual manner, without injury to the plants, and will pay for itself in one day's use.

Price, postpaid, **25 cents**.

HASLETINE HAND WEEDER AND SCRAPER.

The latest and *best hand weeder* for use either in the flower or vegetable garden. For onions and strawberries it is simply indispensable. It is rapid, easy and thorough in its work. The blade is $\frac{1}{8}$ inch wide, is $\frac{1}{8}$ inch thick, solid steel, oil tempered, and has five sharp edges.

Price, postpaid, **30 cents**.

THE CONCAVE AND CURVED SEED POTATO KNIFE.

Cut with a thin, straight knife a slice lengthways about $\frac{1}{8}$ inch thick from the center of a potato and hold it between you and the light. Feeders from the eyes will be shown as in Fig. 1.

If these feeders are interfered with, either by cutting them off or shaving too close to them, the vitality will be greatly reduced.

It is evidently desirable, then, in cutting potatoes for seed, to conform to the structure of the tuber. With the common straight knife this is impossible.

The Concave and Curved Seed Potato Knife meets these requirements fully. It will cut two or three eyes in a piece better than any other knife, and will cut two single eyes without coming in contact with feeders, leaving the pieces in good shape to handle either by hand or with machine.

The great superiority of this knife lies, not so much in the saving of seed as in the increase in yield, for it is a recognized fact that potatoes cut to single eyes and planted in drills will produce the largest crop, and this is the only knife that will cut them to single eyes without injuring the vitality. Full directions for using accompany each knife.

Price, postpaid, **35 cents**.

LADIES' FLORAL TOOLS.

These Floral Sets are so universally known that they need no description. They have steadily increased in public favor ever since their introduction several years ago, and have received the unqualified approval of all, we believe, of the leading florists of the country, and will be appreciated by every lady in the land who cultivates flowers.

Sets of four pieces, price per set, **\$1.25**, postpaid.

"PERFECTION" REVOLVING LAWN AND GARDEN

SPRINKLER AND FOUNTAIN.

Guaranteed to do as much as any Sprinkler made.—The "Perfection" is warranted to accomplish as much as any Sprinkler in the market at the same pressure, and its superiority is shown by its simplicity, ease with which it can be cleared of any obstruction, effectiveness while working in a strong wind; also the circle watered can be reduced to any desired size, by turning the supply partly off. By its simple construction it can be used on hillside or terrace. In connection with a force pump, it can be used with good effect in green-houses, hot beds, etc. The bearings and working parts are made of brass, and it is complete in itself; it has only to be screwed to the hose and the pin stuck into the ground to be used.

Price, postpaid, **\$1.25**.

Brass Green-House and Garden Syringes.

These Syringes are useful for all horticultural purposes, and are fitted with caps or roses for ejecting water in one stream or dispersing it in the most gentle manner, or with great force, when required. They are specially adapted for cleansing plants and flowers from those destructive insects which are so injurious to them, by means of whale oil soap, tobacco juice, etc. They are very strongly made from the best quality of brass, finely polished, elegant in appearance, not liable to dent or become injured, strong in all their parts, and if properly cared for, will last a lifetime. *Sent only by express at expense of purchaser.*

THE IMPROVED HYDRONETTE PUMP.

The improved Hydronette is an invaluable implement for sprinkling flowers, watering lawns, washing windows, carriages, etc., and for extinguishing fires. It is made in a very durable manner, and cannot easily get out of order. The pump has a sprinkler and rubber hose attached. It will sprinkle your flowers, wash your windows, destroy worms on grape vines, tobacco plants and potato vines, and commends itself to every gardener, farmer and householder. Throws a stream 20 to 30 feet. **Price**, delivered free at Express Office here, **\$8.00**. On receipt of **\$8.75** we will deliver free anywhere in the United States.

Six Vegetables Worthy a Place in Every Garden.

DETROIT DARK RED TURNIP BEET.

This is a new and distinct turnip beet, a development from and great improvement on our Improved Blood Turnip. We began working on this variety in 1886, and so close and rigid has been our selection that we have not had enough seed to justify offering it before this year. While this variety has tops so small and upright growing as to make it valuable for forcing, yet its great merit is that it is the best Beet for second early planting outdoors, to follow the Egyptian and Eclipse. The roots are of most perfect form, smooth, with no necks and small tops. The color is dark blood red with no tinge of purple, and is exceedingly uniform. The flesh is most tender, crisp and sweet, and is entirely free from stringiness and woodiness, even after the roots become old and overgrown. Planted in the summer, there is no Turnip Beet so good for fall and winter use. We challenge the severest tests of this splendid sort by the most critical gardeners, because we KNOW it to have the SMALLEST and MOST UPRIGHT growing TOPS; the MOST PERFECTLY SHAPED and SMOOTHEST ROOTS; and the BEST and EVENEST COLOR of ANY TURNIP BEET in cultivation.

Per Packet, 10c; Oz., 15c; 2 oz., 25c; ¼ Lb., 40c; Lb., \$1.50—postpaid.

WHITE COB CORY, SWEET CORN.

Market gardeners everywhere concede the great superiority of the Cory as a first early sweet corn. Its red cob has, however, always been an objectionable feature. We have always noticed in our stock of this variety an occasional ear having a white cob; accordingly, a few years ago we began selecting this and planting it so as to establish this feature. We are now able to offer it, with the confident claim that it is the best variety of first early sweet corn for market and home use. Another desirable feature is that the kernels will average decidedly lighter than in the old Cory. We urge all our patrons to plant this variety, because it is the EARLIEST corn with a MARKETABLE SIZED EAR, and because it has a WHITE COB and LIGHT COLORED KERNELS, removing the ONE REMAINING OBJECTION to the Cory as the BEST OF ITS SEASON.

Per Packet, 20c; Pt., 30c; Qt., 50c; 4 Qts. \$1.50; Bu., \$8.

If by mail or express prepaid, 10c per pint, 15c per quart, must be added for charges.

TILTON'S WHITE STAR LETTUCE.

We secured a limited supply of this new and superior white seeded Lettuce last season, and after giving it a careful trial at our Trial Grounds, we were so thoroughly convinced of its desirability we immediately added it to our list. It is of the type of Black Seeded Simpson, so widely known and used, but the foliage is darker, not quite so much crimped and frilled, with thicker, better flavored leaves, which keep longer without wilting. Also, when planted out doors it will not run to seed nearly so quickly. These features give it a distinct and decided advantage over the ordinary early Lettuces of this class, which will be appreciated by all who grow them, either for market or family use.

Per Packet, 10c; Oz., 30c; 2 Oz., 55c; ¼ Lb., \$1; Lb., \$3—postpaid.

LONG BRIGHTEST SCARLET, WHITE TIPPED RADISH.

This splendid new variety needs only to be tried to make for itself a place among the leading sorts for forcing or early outdoor plantings. It is of the same type as Wood's Frame, having a better and more evenly developed root, is just as early, has as small or smaller tops, and is much better in color. Indeed, we have never yet seen a more attractive Radish when bunched for market. The color is a rich bright scarlet over the body of the root, with a clear white tip, which is so clearly defined as to form a sharp and striking contrast. We used the name Long Deep Scarlet last year, under which name a great number of our patrons bought it, and were delighted with the results, but we found on more extensive trial that Deep Scarlet did not describe the color properly, so we have changed it to what it should have been at first, Brightest Scarlet.

Per Packet, 5c; Oz., 10c; 2 Oz., 15c; ¼ Lb., 25c; Lb., \$1—postpaid.

MAMMOTH SUMMER CROOKNECK SQUASH.

This Squash, introduced by us last year, is all that its name implies, a MAMMOTH among SUMMER SQUASHES. Mere size, however, is not the only consideration in the selection of a fruit or vegetable. Quality and several other points are of equal importance. Our Mammoth Summer Crookneck is not only two or three times as large as the old Summer Crookneck, but it is much earlier, of fully as good quality and far more warty, a condition which adds very much to its attractiveness as a market variety. The plants have the bush habit, scarcely any of them making running vines, enabling them to be planted closely in the row, which insures an enormous yield from a small space. Whether you plant for market or for your own use only, you can make no mistake in using this variety.

Per Packet, 10c; Oz., 50c; 2 Oz., 85c; ¼ Lb., \$1.50; Lb., \$5—postpaid.

EARLY MICHIGAN, OR EARLY RED APPLE TOMATO.

This is not a new tomato, for we offered it first in 1880, and have been offering it since as Early Red Apple. We very speedily learned, however, that we had given this splendid sort an unfortunate name, our customers naturally inferring that it was the counterpart of the old White Apple except in color, or at best much the same as the Red Apple of long ago, while nothing could be further from the truth. With all our long experience with tomatoes, having tested at one time or another nearly every variety offered by seedsmen, we confidently claim that there is no better variety than this for general market or family use. We speak thus emphatically, because we have given a great amount of time and expense to perfecting our stock, and know that for smoothness and regularity of shape, uniformity of size and color and freedom from rot or cracking, this variety is unsurpassed. It is not only an extremely smooth and perfectly shaped tomato, but it is also very early, ripening its first fruits almost as early as any sort in cultivation. Vines large, with large, dark green leaves; vigorous and wonderfully productive, being, we think, under high culture, one of the heaviest croppers of any; fruit medium size to large and, unlike most varieties, growing larger as the season advances, perfectly smooth, solid, but without any core; deep, rich red color, and of excellent flavor.

Per Packet, 5c; Oz., 30c; 2 Oz., 55c; ¼ Lb., \$1; Lb., \$3—postpaid.

OUR COLORED PLATE COLLECTION,

Containing one FULL SIZE Packet of each of the above Splendid Novelties, 50 cts., POSTPAID.

D. M. FERRY & CO'S

SEED ANNUAL

• 1892 •

THE time for making the yearly purchases of seeds has come round again and we take pleasure in placing in your hands our Illustrated and Descriptive Seed Annual, which we believe to be better than ever before in the quality of the subject matter and the variety and range of choice of Vegetable and Flower Seeds from which to make a selection. Just here we wish to call your attention to the fact that we attempt to make our Annual what it purports to be, an *illustrated* and *descriptive* list of the things we offer. The cuts are made from drawings of photographs of the plants themselves and are necessarily truthful. The descriptions are concisely stated condensations of the notes taken on our trial grounds or elsewhere, and are as accurate as words can make them. The cultural directions are such as extended observation and experience have demonstrated to be generally applicable to the class of plants to which they refer. In short, it is our endeavor to make our Annual a useful manual of information, giving to intending purchasers a definite idea of the goods we handle, so that they may readily select from among them such as are suitable for their use. We might adopt the too prevalent custom of making exaggerated cuts and descriptions, representing plants which never did and never can exist and mislead thereby for a time the unwary and inexperienced, but we do not believe that such methods can or ought to lead to permanent business success.

From the number of years we have been in business and the reputation we have for handling nothing but good and reliable seeds it might seem unnecessary for us to repeat from year to year how our seeds are grown and what our facilities are for handling them, but this Annual will fall into the hands of many new readers who will want to be informed in these matters, and our old customers are, of course, anxious to keep posted as to any improvements which may be made from time to time in our methods and equipments.

In growing our seeds we make use of our Greenfield Seed Farms, just outside* the City of Detroit. They are under the management of one of the oldest and most experienced seed growers in America, and are devoted largely to growing onions and other crops which require two years to perfect their growth. They are fully equipped with buildings and machinery, and barn-yard manure and commercial fertilizers are used without stint in order to get the most perfect growth and the largest yield possible of everything planted here. The annual product of onion seed alone from these farms is from twenty to thirty tons, which illustrates the magnitude of the crops grown.

Realizing ever since we began the business the enormous influence the *seed* has upon the quality and character of the resulting crop, we have always used the greatest care in selecting our stock seeds, that is, the seeds from which the seeds we offer are grown. In order to be in a position to grow as large a proportion of this stock seed on our own land as possible, where it would be *absolutely* under our control, we bought a few years ago what is known as our Oakview Seed Farm, of over two hundred acres within the corporate limits of the City of Pontiac, Mich. This farm is under the control of a competent and skilful superintendent and is supplied with machinery and buildings for caring for and storing the crops grown. It is our aim to grow nothing but stock seeds here and to this end the most rigid supervision is kept of the growing crops and nothing but the most perfect and nearest typical plants allowed to mature. Oftentimes four-fifths of a crop is thrown out and rejected as unfit for stock seed purposes.

As it took thirty tons of cabbage, sixty-one tons of beet, thirty-three tons of onion, one hundred and forty-seven tons of turnip seed, twelve thousand bushels of corn, forty thousand bushels of peas, and other varieties of seeds in like proportion, to meet the requirements of our trade the past year, it is manifestly impossible for us to grow all these amounts on our own land, requiring as it does twelve to fifteen thousand acres annually to be used for this purpose. After we have grown the stock seeds as above described, we have crops grown from them by reliable growers in America and Europe, under *contract*, we retaining full control as to how the crops shall be planted, cared for and harvested. The different kinds of crops are planted in such localities as experience and observation have shown to be best suited to their proper development. By careful directions, visits of inspection and the use of our Trial Grounds, we are enabled to grow seeds of the same excellence in this way as those produced on our own farms.

At our Trial Grounds on Ferry Avenue, in Detroit, a sample of each lot of seeds we handle is tested for vitality, to find how many seeds in one hundred will grow, and also for purity and quality of stock. These tests, along with the inspections of the crops as they grow in the field, make it impossible for any of our stocks to deteriorate or become impure without our speedily finding it out. Here also are planted samples of all the "novelties" introduced by other seedsmen and anything which is claimed to be new and superior grown by amateurs which they may send us. By this means we are enabled to satisfy ourselves of the value of any novelty before it can find a place on our list. These grounds consist of about ten acres and are under the management of a competent superintendent and are pronounced by disinterested observers to be the most complete of their kind in this or any other country.

After the seeds are grown they must all be brought to our Central Seed Warehouses, located on the corners of Brush Street and Monroe Avenue (formerly Croghan Street). The warehouse built by us in 1887 covers one-half a city block, extending 300 feet on Brush Street and 120 feet each on Monroe Avenue and Champlain Street. It has six stories, besides a basement, affording between seven and eight acres floor surface.

Even with this large space, however, we had become so cramped for room to store and properly handle the increasing quantities of seed needed to meet our requirements, that we *have built another large warehouse* by the side of our box factory, the past year. This building faces Monroe Avenue. It is 85 feet wide, 140 feet deep, and has eight stories and a base-

ment, thus giving us fully one-half more floor space. Everything about this building is after the most approved plan of Seed House construction and is fully as substantial and well adapted to our purposes as our warehouse described above.

Standing between our warehouses is our box factory. This three-story brick building, erected and maintained especially for the manufacture and repair of our boxes, supplies heat and power to our warehouse, and in our busy season keeps 100 men at work with numerous machines designed especially for us. These machines accomplish every kind of mechanical work, from sawing and planing rough lumber to nailing, screwing and sandpapering the finished box. We make annually 35,000 boxes, requiring three-quarters of a million feet of cherry, walnut and pine. Our use of lumber is so extensive that we maintain a lumber yard of our own.

SCENE ON D. M. FERRY & CO'S GREENFIELD SEED FARMS—CURING ONION SEED.

We also have a separate branch house in Canada for the better accommodation of our large business there. This house is located at Windsor, Ont., and from it we execute promptly all orders in large or small quantities by mail, express or freight, without any of the vexatious delays and expensive processes of entering and paying duties. Our stocks are imported directly into Canada, and a duplicate will be found there of nearly everything we sell in the States. The advantages of this arrangement to our Canadian friends cannot be over estimated, as it places them on a par with our patrons in the States.

FORMATION AND MANAGEMENT

— OF —

Vegetable Gardens

SITUATION AND EXPOSURE.—One of the most frequent causes of failure of the vegetable garden is the attempt to combine it with the orchard and small fruits. Good vegetables cannot be grown in the shade, and even if the space is limited, it is better to have a very small vegetable garden unshaded than to attempt to grow them in an orchard. A second cause of failure is so arranging the garden that a horse cannot be used in cultivation. On the farm especially it should be placed so as to be easily reached from the barn. Abrupt slopes in any direction are to be avoided. A gentle inclination to the south and east is the warmest, will give the earliest vegetables, and be best for Corn, Melons, Tomatoes, etc., but it suffers more from a spring or early fall frost, because of receiving the direct rays of the morning sun. An inclination to the north and west is later, suffers less in a drought, and is the best for Peas, Cabbage, Lettuce, etc. So it is an advantage in a large garden to have both these exposures, but for small gardens a gentle inclination to the south and east, or a level surface, is the best.

SOIL.—A good garden can be made on *any soil*, but that best suited to the purpose is a deep, rich, friable loam, resting on a sand or gravelly subsoil; and the more nearly other soils can be made to approach this the better. This may be accomplished in tenacious clays (and must be for a good garden) by good drainage, deep and judicious cultivation, use of coarse manure, and liberal applications of leached ashes, sand, and in some cases of peat. If the soil is naturally too light and sandy, it may be improved by rolling and the use of large quantities of well composted manure and muck, and by dressings of clay.

SIZE AND FORM.—A single bed ten feet square, well manured, well spaded, and thoroughly cultivated and cared for, will produce more *good* vegetables, be more profitable, and give better satisfaction, than an acre unmanured, half prepared, and poorly cared for. Our golden rule for size is, make your garden *no larger* than you can prepare and care for in the best possible manner. If it all has to be done by hand, it will take the entire time of one man to keep in good order a garden of one acre, but if it is so arranged that the horse cultivator can be used, he can care for four times that area. In village gardens, the form is usually determined by that of the lot, but where there is a choice, a rectangle several times longer than wide, the sides running from north to south, is the most economical; if this can be so placed that a space of eight feet wide at both ends or along both sides can be left for a horse to turn in, it will be a great advantage.

DRAINAGE.—Nothing is more essential for a good garden than good drainage. It is impossible to raise a supply of fine vegetables without it. If the soil is at all wet it should be well drained with tile, but if this is not possible, something can be gained by ploughing or throwing the soil up into beds from six to thirty feet wide, with smooth bottom trenches between them to collect and carry off the surface water.

MANURES.—For garden purposes there is nothing better than well rotted stable manure, with which tobacco stems, bones, leaves, or any refuse vegetable or animal matter may be composted with advantage. It should be applied at the rate of one ton or an ordinary wagon load for every 500 square feet. This should be ploughed in unless the soil is quite sandy and the manure very fine, when it may be applied on the surface, and simply harrowed or raked in. Plaster, salt, wood, ashes, guano, ground bone, all are valuable and can be used to advantage in connection with the stable manure. Plaster should not be applied until the plants are well up. Ashes should not be mixed with the other manures, and may be sown broadcast and raked in just before planting. Guano, ground bone, and superphosphate should be applied to the surface just before planting, spreading it about as thick as saw dust is usually spread on a floor, or using 1,800 to 2,500 lbs. to the acre, and carefully raked into the surface soil, for if it comes in contact with the seed or starting roots it will kill them. In some cases sand, leached ashes and peat on clay soils, and clay and muck on sandy soils, will prove as valuable as manures. Occasionally a spot which has been used for a garden for many years will become unproductive in spite of liberal manuring. We know of no other remedy than to abandon it for a garden, seed down to clover and allow it to remain two years, when it may be ploughed under, and the garden will be found to have regained its original fertility.

PREPARATION OF THE GROUND.—Thorough preparation of the ground is of vital importance in raising good vegetables: if this work is well done, all that follows will be easier. The garden should be *well* ploughed or spaded, taking care if it is a clay soil that the work is not done when it is too wet. If a handful from the bottom of the furrow moulds with slight pressure into a ball which cannot be easily crumbled into fine earth again, the soil is too wet, and if ploughed then will be hard to work all summer. The surface should be made as fine and smooth as possible with the harrow or rake, and in case of sandy soils it should be rolled with a heavy roller. It is generally necessary to plough the whole garden at once, and to do this in time for the earliest crops, but the part which is not planted for some weeks should be kept mellow by frequent cultivation. Stiff clay soils are frequently wonderfully improved by trenching, that is, spading two feet deep in such a way as to leave the surface soil on top. This is accomplished by digging a trench two feet wide across one side, and a second one adjoining and parallel with it one spade deep. The remaining earth of the second trench is then thrown into the first and covered with the surface soil from a third trench; the balance of the third is then thrown into the second and covered with the surface of the fourth; and so on until all is worked over, when the soil from the first trench is used to fill the last. This is quite expensive, but frequently changes a soil upon which nothing can be grown into one producing the finest vegetables, and its effects last for several years.

ARRANGEMENT.—In the city gardens, or where most of the work is done by hand, this may be entirely a matter of taste, but it is quite important to have the garden so arranged that most of the work can be done by horse power. We can best point out the things to be considered in the arrangement by means of the accompanying illustration. The points gained by this plan are:—

First.—Ability to cultivate the ground. All but a strip seven and one-half feet wide between the Beets and Bush Beans can be worked by any common one-horse cultivator.

Second.—Placing those vegetables which may stay out all winter side by side, where they will not interfere with next season's ploughing.

Third.—Arranging the vegetables very nearly in the order in which they should be planted or set out in the spring. This would be nearly perfect, except in case of the Cucumbers, if the late Cabbage were to follow the Tomatoes.

Fourth.—Providing for easy rotation of crops by simply reversing (with the exception of the permanent row of Asparagus and that of the Parsnip and Salsify) the plan.

The number of rows of each vegetable and the relative proportion of each may be varied according to the wants of the family, but the proportion given here will be found to suit most families who depend upon the garden for both winter and summer vegetables.

D. M. FERRY & CO'S CENTRAL SEED WAREHOUSE, ERRECTED BY THEM IN 1887.

J.B. THOMAS
DETROIT, MICH.

If necessary, the turning ground at both ends may be filled with Winter Squashes, as these are planted so late and at such a distance apart that they would not seriously hinder the turning of a steady horse with a careful driver. Whatever the arrangement followed may be, we earnestly urge that every effort be made to secure straight and perfect rows. There is, perhaps, no one thing that will make the subsequent cultivation easier, or contribute more to the owner's satisfaction in his garden than this, and a little extra effort in this respect at the first will give pleasure all through the season.

EAST.

Asparagus.	Rhubarb.	Artichoke.	6 feet.
Parsnip.	Salsify.	Cucumbers, followed by Fall Spinage.	6 feet.
Peas.			4 ft.
Early Potatoes or Peas, followed by Celery.			4 ft.
Early Cabbage and Cauliflower.			3 ft.
Beets.	Turnips.		3 ft.
Lettuce, early and late.	Winter Radish.	Endive.	2 1/2 ft.
		Parsley.	1 ft.
Onions, with early Radish, sown in row.			2 1/2 ft.
Bush Beans.			1 ft.
Late Cabbage.			4 ft.
Early Corn and Summer Squash.			4 ft.
Late Corn.			4 ft.
Tomatoes and Pole Beans.			4 ft.
Musk and Water Melon.			6 feet.
Winter Squash.			8 feet.
			8 feet.

WEST.

SOWING THE SEED.—There is no more prolific source of disappointment and failure among amateur gardeners than hasty, careless or improper sowing of the seed. The seed consists of a minute plant minus the roots; with a sufficient amount of food stored in or around it to sustain it until it can expand its leaves, form roots and provide for itself, the whole enclosed in a hard and more-or-less impervious shell. To secure germination, moisture, heat and a certain amount of air are necessary. The first steps are the softening of the hard, outer shell, the developing of the leaves of the plant from the absorption of water, and the changing of the plant food from the form of starch to that of sugar. In the first condition the food was easily preserved unchanged, but the plant with its undeveloped leaves and no root was incapable of using it, while in its sugary condition it is easily appropriated; but if not used it speedily decays itself and induces decay in the plant. A seed then may retain its vitality and remain unchanged for years, while after germination has commenced, a check of a day or two in the process may be fatal. There is no time from that when the seed falls from the parent plant until it in turn produces seed, ripens and dies, when the plant is so susceptible of fatal injury from the overabundance or want of heat and moisture, as at that between the commencement of germination and the formation of the first true leaves, and it is just then that it needs the aid of a gardener to secure favorable conditions. These are:—

First.—A proper and constant degree of moisture without being soaked with water. This is secured by making the surface of freshly dug soil so fine that the smallest seeds may come in immediate contact on all sides with the particles from which they are to absorb the required moisture and the pressing of the soil over the seeds so firmly with the feet or the back of the hoe that the degree of moisture may remain as nearly as possible the same until the plants are up.

Second.—A proper degree of heat, secured by sowing each variety of seed when the average temperature of the locality is that most favorable for its germination. This may be learned from a careful study of the following pages and the experience of the most successful gardeners of your vicinity.

Third.—Covering the seed to such a depth that while it is preserved at a uniform degree of heat and moisture, the necessary air can readily reach it, and the tiny stem push the forming leaves into the light and air. This depth will vary with different seeds and conditions of the soil, and can be learned only from practical experience. In general, seeds of the size of the Turnip should be covered with half an inch of earth pressed down, while Corn may be an inch, Beans two or three and Peas two to six inches deep.

Fourth.—Such condition of soil that the ascending stem can easily penetrate it, and the young roots speedily find suitable food. We can usually secure this by thorough preparation of the ground, and taking care never to sow fine seeds when the ground is wet. Occasionally a heavy or long continued rain followed by a bright sun will so bake and crust the surface that it is impossible for the young plant to find its way through it, or a few days of strong wind will so dry the surface that no seed can germinate. In such cases the only remedy is to plant again.

CULTIVATION.—Every weed should be removed as soon as it appears, especially while the plants are young; this will require almost daily attention, but if well done early in the season, the later work will be light. Mere destruction of weeds is by no means the only object of cultivation. A. J. Downing, who was perhaps the best horticulturist America has known, said: "If I were to preach a sermon on horticulture, I should take as my text, 'STRIP THE SOIL,'" and certainly the text would contain much of the gospel of successful gardening; frequent stirring will enable one to grow fine vegetables on comparatively poor and slightly manured soil, while without it one fails to gain much advantage from the richest and finest soil. Let the cultivation be done judiciously, however. Young plants may be cultivated quite deeply without injury, but as the season advances and the ground becomes filled with roots, cultivation should be more and more shallow until the soil is not stirred more than one to two inches deep. The root pruning, caused by deep cultivation of growing crops, is a prolific source of loss. Care should also be taken that the cultivation is not done when the soil is wet. With this exception, cultivate as often and as thoroughly as possible.

D. M. FERRY & CO'S SEED WAREHOUSE B, ERECTED BY THEM IN 1891.

HOT-BEDS.

For early vegetables, some provision for starting certain plants earlier than can be done in the open air is necessary: for this purpose nothing is better than a good hot-bed, and its construction is so simple and the expense so light that every garden should have one. A hot-bed proper not only protects the plants from the cold, but supplies *bottom heat*. By this term the gardener means that the soil is constantly kept several degrees warmer than the air above, that being the condition so far as heat is concerned, which is most favorable for rapid and vigorous growth. It is evident that to produce this we must in some way apply our heat below the surface, and it is usually done by making a compact pile of some fermenting material and covering it with the earth in which the plants are to grow.

HEATING MATERIAL.—The best heating material that is easily available is *fresh* horse manure, containing a liberal quantity of bedding, which may be straw, shavings, or best of all, leaves. Such manure, if thrown into a loose pile, will heat violently and unevenly and will soon become cold. What is wanted in the hot-bed is a steady and moderate but lasting heat. To secure this, the manure should be forked over and watered if it is at all dry, then thrown into a loose pile, which should remain undisturbed for a few days, and then be forked over again, piled and allowed to heat a second time, when after a few days more it will be ready for use. The object of this repeated forking over and piling is to get the whole mass into a uniform degree of fermentation.

SASH.—Gardeners commonly use sash made especially for hot-beds and glazed with small lights cut from odds and ends and so furnished at very low rates. Such sash can usually be procured in any of our large cities, and cost much less than if made to order. For garden use, however, we much prefer a small size that can be easily handled, and the use of larger and better glass. We would recommend that the sash be three by five feet, and that the glass be not less than 10 x 14, laid with not more than one-quarter inch lap. In giving the order to one unaccustomed to the work, it would be well to state what they are to be used for, and that they need to be made like sky-light sash.

THE FRAME.—This may be made of sound one-inch lumber, the back twelve to fourteen inches high, the front ten to twelve. It should be well fitted to the sash so as to leave as little opening as possible and yet allow the sash to be easily slid up and down, even when the frame is quite wet.

THE SOIL.—This should be *light, rich, friable*. Any considerable amount of clay in it is very objectionable. If possible, it should be quite dry and unfrozen when put into the bed; for this reason it is much better to prepare it the fall before and cover the pile with enough coarse manure or straw to keep out frost.

MAKING THE BED.—This requires careful attention, as future success depends largely upon the manner in which this work is done. Having cleared away all snow and ice, build a rectangular bed one foot larger each way than the frame to be used, carefully shaking out and spreading each forkful, and repeatedly treading down the manure so as to make the bed as uniform as possible in solidity, composition and moisture; unless this is done one portion will heat quicker than the others, and the soil will settle unevenly, making it impossible to raise good plants. The proper depth of the bed will vary with the climate, season, and the kind of plants to be raised. A shallow bed will give a quick, sharp heat and soon subside; a deeper one, if well made, will heat more moderately but continue much longer. For general purposes, a bed one and a-half to two feet deep will be best.

The bed completed, the frame and sash may be put on, and fresh manure carefully packed around the outside to the very top (if the weather is at all severe, this outside banking should be replenished as it settles). The bed should then be allowed to stand with the sash partially open for a day or two to allow the steam and rank heat to pass off. The earth should then be put on and carefully leveled. Care should be taken that the soil is dry and friable. If wet or frozen soil must be used, it should be placed in small piles until well dried out before spreading. The heat at first will be quite violent, frequently rising to 120 degrees, but it soon subsides, and when it recedes to 90 degrees the seed may be planted. The importance of using dry soil and allowing the first rank heat to pass off is very great. Every season thousands of hot-beds fail of good results from these causes, and seedsmen are blamed for failure resulting from over heat or wet, soggy soil.

MANAGEMENT OF THE BED.—The essentials for success are a steady, uniform degree of heat and moisture; keeping the soil at all times a few degrees warmer than the air, and the careful "hardening off" (by exposure to the air and diminishing the supply of water) of the plants before transplanting into the open air. Simple as these seem to be, there are many difficulties in the way of securing them, prominent among which are overheating the air under a bright sun. Without experience one would scarcely believe how quickly the temperature inside of a well built hot-bed will rise to 90 or 100 degrees upon a still, sunny day, even when the temperature outside is far below freezing, or how quickly the temperature will fall to that outside, if upon a windy, cloudy day the sash is left open ever so little; besides, such a rush of cold air driven over the plants is far more injurious than the same temperature when the air is still. Again, a bed will go several days without watering when kept closed during cloudy weather, but will dry up in an hour when open on a sunny day. The details of management, however, must be learned by experience, but may easily be acquired by one who gives the matter careful attention, keeping constantly in mind the essentials given above.

A COLD FRAME is a simple construction of boards for wintering cabbage, lettuce, cauliflower, brocoli, etc., for planting out early in the spring.

Select a dry, southern exposure; form a frame from four to six feet wide and as long as required. The back should be fourteen and the front six inches high, with a cross tie every three feet. Seeds of the above named vegetables, sown in open border early in September, will be ready to plant in cold frames about the last of October. The soil should be well prepared and smoothly raked before planting. Admit air freely on all pleasant days, but keep close in severe weather.

These frames are particularly useful in the South, and may be covered more cheaply with cloth shades than by sash. The shades are made as follows: Make light but strong wooden frames to fit over the bed, and of a width to receive some common brand of cotton cloth. The cloth may be unbleached, and should be stretched over and securely tacked to the frames. Coating the cloth with oil, as is sometimes recommended, we find is of no advantage, but we have found the Plant Bed Cloth prepared by the U. S. Waterproofing Fiber Co., of New York, to be superior to ordinary cloth for this purpose.

SHADES.—In the South it is frequently desirable to shade beds of seedlings. This can best be done by shades made as follows: Make light frames the length of the width of your bed and four feet wide; to these tack common lath so as to leave from one to three inches between them. Support them about eight inches above the plants by tacking the frames to short stakes or securing them by easily removed pins. They are more effective if the beds are so placed that the lath will run north and south.

TRANSPLANTING.—In transplanting, the main points to be regarded are, care in taking up the plants so as to avoid injury to the roots, planting firmly so as to enable the plant to take a secure hold of the soil, reducing the top to prevent evaporation, and shading to prevent the hot sun from withering and blighting the leaves. In transplanting from a hot-bed, harden the plants by letting them get quite dry a day or two before, but give an abundance of water a few hours before they are taken out. It is most apt to be successful if done just at evening, or immediately before or during the first part of a rain, about the worst time being just after a rain, when the ground being wet it is impossible to sufficiently press it about the plant without its baking hard. If water is used at all, it should be used freely and the wet surface immediately covered with dry soil.

WATERING.—The best time to water plants is at sunrise or just at evening. Water may be given to the roots at any time, but should never be sprinkled over the leaves in the hot sun, for it will make them blister and cover them with brown spots wherever it touches. If watering a plant has been commenced, keep on until the necessity ceases or more injury than good will result from it; one copious watering is better than a little and often. The use of the hoe should always follow the watering pot as soon as the ground becomes sufficiently dry.

Illustrated and Descriptive Catalogue

• • OF • •

VEGETABLE SEEDS

WITH

GENERAL DIRECTIONS FOR CULTIVATION.

The Terms and Prices of Vegetable Seeds will be found in the Price List, in the back part of this Catalogue.

ARTICHOKE.

French, *Artichaut*. German, *Artischoke*.

CULTURE.—Sow in hot-beds and transplant into pots, or so as to give plenty of room until danger of frost is over, and then set in very rich ground, four feet apart; or the plants can be raised in seed beds out of doors, but in that case will not be likely to produce heads the first year. The edible portion is the undeveloped flower heads, which will be produced about September 1st, and until frost. Late in the fall, cut off the old tops and protect the crowns with leaves or straw to prevent severe freezing. The second year they will commence to form heads about July 1st. The plants may also be blanched like Cardoons, which is accomplished by cutting the plants in July, tying up and blanching the rapidly growing shoots like celery.

LARGE GLOBE.—The best sort for general use. Buds large, nearly round; scales deep green, shading to purple, very thick and fleshy.

ASPARAGUS.

French, *Asperge*. German, *Spargel*.

Asparagus is one of the earliest spring vegetables, and would be in universal use were it not for the prevalent idea that it is difficult to grow it. We think this is a mistake, and that there is no vegetable on our list that can be produced so cheaply and easily as this. It delights in a moist, sandy soil, but can be grown in any garden by following the directions given below. A bed 12 x 40 feet, requiring 50 to 75 plants, should give an abundant supply for an ordinary family.

CULTURE.—Beds are usually formed by setting plants one or two years old, which can be procured of us; but if you wish to grow them yourself, prepare a light, rich spot as

early as possible in the spring. Pour *boiling* water on the seed and pour it off *at once*, and sow in drills one foot apart and two inches deep. When the plants are well up, thin to two or three inches in the row, and give frequent and thorough cultivation during the summer. If this has been well done, the plants will be fit to set the next spring. The permanent beds should be prepared by deep plowing or spading and thoroughly enriching the ground with stable manure or other fertilizers. If the subsoil is not naturally loose and friable, it should be made so by thorough stirring with a subsoil plow or the spade. Make rows five feet apart and four inches deep and set the plants in the bottom of the rows two feet apart. Cover the roots about two inches deep. After the plants are well started, give frequent and thorough cultivation, and draw a little earth into the furrows at each hoeing until they are filled. Early the next spring, spade in a heavy dressing of manure, and one quart of salt to each square rod, and cultivate well until the plants begin to die down. The next season the bed may be cut over two or three times, but if this is done *all* the short shoots, no matter how small, should be cut, and after the final cutting, give a good dressing of manure, ashes and salt. The next season, and ever after that, the bed should give a full crop and be annually dressed with manure, ashes and salt, after the last cutting, and well cultivated until the plants occupy the whole space. In the fall, as soon as the tops are ripe and yellow, they should be cut and burned. The plants may also be set in the fall, if the ground is so well drained that water will not stand on it. Winter protection with coarse litter or manure is not needed, except in the extreme North.

CONOVER'S COLOSSAL.—A mammoth sort, frequently sending up fifteen or thirty sprouts from one to one and a-half inches in diameter from a single plant, and spreading less than most sorts. Color deep green; quality good.

BEANS.

DWARF, BUSH OR SNAP.

French, *Haricot*. German, *Bohne*.

Under this name are classed all the low growing sorts, called in different catalogues *Bush*, *Bunch*, *Snap*, *String* or *Dwarf Beans*.

CULTURE.—No crop responds more readily to good soil and cultivation than this; that best adapted to them being a light, rich, well drained loam, which was manured for the previous crop. If too rank manure is used it is apt to make them grow too much too vine. They are all extremely sensitive to frost and wet, and it is useless to plant them before the ground has become warm and light. The largest return will result from planting in drills about three feet apart, and the plants two to eight inches apart in the row. Up to the time of blossoming they should have frequent shallow cultivation, but should not be disturbed after they commence to bloom, as it would prevent their setting well.

In the following descriptions the varieties are placed about in the order of ripening, and it is assumed that they are grown on rich, light soil, as different soils produce quite a variation in vines, pods and beans, and it is useless to expect good results from the finer garden sorts on poor or cold and wet soils. From one pint to two quarts will be sufficient to furnish a supply for an ordinary family, and varieties should be selected so as to give a succession both of string and green shelled beans. The wax podded beans are particularly liable to run "off" into green podded plants, and it requires constant attention and skillful culture to keep them pure. A comparison of our stocks of beans with those offered by other dealers shows them to be as good and pure strains as any in cultivation.

ASPARAGUS

CHALLENGE DWARF BLACK WAX, EXTRA EARLY.—When we placed this bean on the market last year we were confident that it merited all the praise we gave it and more too, and the result has fully justified our confidence. We can assure our customers that they can make no mistake in using this for their crop of extra early wax beans, as it has proven itself after another most thorough trial to be fully one week earlier than any other wax bean. The plants are fully as vigorous and prolific as the Prolific German Wax, have the same general appearance and are about the same size; pods fully as large and of as good color, but are not quite so much curved and are flatter, while the dry bean is longer, more curved and flatter, though jet black. Market gardeners and others to whom earliness is a matter of first importance, cannot afford to be without this, which is truly the "earliest of all" the wax beans.

BLACK-EYED WAX.—Very early. Vines medium size, erect, bearing the pods near the centre. Leaves large, thin, quite dark green in color. Pods long, straight, proportionately narrow, and rounder than those of the Golden Wax, and of a lighter color, with a medium length light green point. They cook quickly, both as snap and as shell beans. Dry beans, medium size, long, cylindrical, white, with black spot around the eye. As early and with as handsome pods as the Golden Wax, of very good quality and in some localities esteemed highly as a first early variety.

D. M. FERRY & CO'S DETROIT WAX.—The hardest of all the wax beans. Plants erect, bearing their pods near the centre, often throwing them above the foliage. Very productive; leaves large, dark green; blossoms small, white; pods straight, flat, but thick to edge; distinctly broader than the Golden Wax. They do not turn to wax color so early, but when well grown and fit for use they are of a beautiful golden wax color and of the finest texture. We think this variety the least liable to rust of any and the fact that other seedsmen offer it under other names as *absolutely* rust-proof, is evidence that they have found it as nearly rust-proof as any bean can be. The fact that when picked along with Golden Wax and other varieties, it keeps bright and crisp long after the others are wilted and unsalable, makes it one of the best for shipping long distances. It is also one of the very best green shelled beans, and excellent dry, being very much like the White Marrow when baked. Dry beans the shape of the White Marrow, white with large patch of chocolate brown about the eye.

D. M. FERRY & CO'S GOLDEN WAX.—This bean,

D. M. FERRY & CO'S
GOLDEN WAX.

introduced by us in 1876, has long been the standard wax variety for general use, and while many varieties have been introduced claiming to be superior in some respects and aiming to replace it, they have all sooner or later been forced to the rear as not possessing as many good qualities in as high degree. Vines medium size, erect, moderately spreading, hardy and productive, with small, smooth leaves, and small, white blossoms. Pods long, nearly straight, broad, flat, golden yellow, very fleshy and wax-like, with short, fleshy, green point, cooking quickly as snaps, and shelling well when green, and of the highest quality in both conditions. Beans medium size, oval, white, more or less covered with two shades of purplish-red. Our stock of this variety is unsurpassed.

WARDWELL'S KIDNEY WAX.—The vines of this variety are very large, strong growing and vigorous, yielding a large crop of long, nearly straight, handsome, very white and wax-like pods. They are of good quality and on this account, as well as their beauty of form and color, are easily sold, even when most sorts are a drug. They ripen about with the Golden Wax. The dry beans are large, kidney shaped, white, with dark markings about the eye. Market gardeners find this a profitable variety owing to the large size and handsome color of the pods.

NEW GOLDEN-EYED WAX.—We have grown this variety on our trial grounds for two years now and find that, with the exception, perhaps, of the Detroit Wax, it is the nearest rust-proof of any of this class. Vines large, with coarse leaflets, upright, bearing pods well off the ground, vigorous, hardy, quite prolific; flowers white, medium size; pods long, straight, flat, moderately fleshy, rather coarse and are not entirely stringless nor of the best flavor; color waxy golden yellow. Dry beans medium size, long,

kidney shape, almost cylindrical; white, with a yellow spot around the eye. In the East, where it originated, this variety has grown quite rapidly in favor with gardeners, owing to its hardness and large handsome pods, which stand shipping extremely well. We have grown our own stock from the best seed procurable.

PROLIFIC GERMAN WAX, BLACK SEEDED.—We are so thoroughly satisfied with this improved strain of Black Wax that we have discarded the old strain altogether, this being more vigorous growing, far more productive, with a longer, whiter, more fleshy pod, and unsurpassed in flavor. Vines medium size, very vigorous and hardy, withstanding rust exceedingly well. Flowers, reddish-white or purple. Pods medium length, borne well up among the foliage, curved, cylindrical, thick, fleshy, and of a clear, waxy-white color, with long, slightly curved point; remain a long time in condition for use as snaps. Beans small, oblong, jet black. No one can afford to plant the old strain, as this is much better in every respect. It is the same as the Cylinder Black Wax of other seedsmen.

SCARLET FLAGEOLET WAX.—The Flageolet Wax, as grown in Europe, consists of two stocks, one with beans of a scarlet color, and the other with beans of similar form but deep violet or purple shade. We have separated and fixed the lighter colored bean by careful selection for many years, and have given it the above name. Vines large, branching, but erect; productive. Leaves large, very light colored; blossoms white; pods very long, flat, often curved and twisted, of a golden wax color, but rough surface, point projecting from back side of pod and very long, the pod gradually tapering into the point. Dry beans, large, flat, bright red.

VIOLET FLAGEOLET WAX.—Plant very large, with large, light green leaves. Pods very long and large, being longer than those of the Scarlet Flageolet Wax, also more twisted. When well grown, one of the most showy possible of wax beans. The pods are a little later in coming to use than the Scarlet, but are distinctly larger. This is also sold as Perfection Wax, and by other names.

SPECKLED WAX.—We are better pleased than ever with this grand, new bean after another year's experience and feel perfectly sure that our customers need only to give it a trial to be as well satisfied with it as we are. Indeed, some of the most pleasant letters we have had this year have been in praise of the merits of this variety. It follows Challenge Black Wax and Golden Wax very closely and is the best sort to follow them for a succession. Vines large, much branched, upright, extremely hardy, vigorous and productive; leaves large and coarse, resembling Kidney Wax. Pods long, cylindrical, crisp, tender, stringless and of a clear, yellowish, waxy-white color. As the pods mature, they become splashed with crimson, making them very attractive, and in this condition they may be used for shell beans. Dry beans medium size to large, long, straight, cylindrical; color light brown, mottled and striped with chocolate brown. For vigor of growth and hardness, this sort cannot be excelled; as a snap bean it is of extra good quality, and as a shell bean it is as good as the best. We know of no bean, except this, which can take the place of the Dwarf Horticultural as a shell bean, and we earnestly recommend all who have not been successful with that sort to give it a trial. As a general crop bean to be used either as snaps, green shelled or in the dry state, we can confidently recommend it as superior to any other variety.

SCARLET FLAGEOLET.

GERMAN WAX, WHITE SEEDED.—Vines small, erect, with large, light-colored leaves, and white blossoms. Pods short, broad, flat, white, fleshy and wax-like, of medium quality, but very handsome. Beans medium size, oval, white.

CRYSTAL WHITE WAX.—Distinct but not strictly a wax bean. Very desirable for snaps or for pickles. Vines large, spreading, very productive, having many runners, producing pods in pairs throughout their whole length; blossoms small, yellowish-white; pods greenish-white, short, curved, round or thicker than wide, with crease in the back, very fleshy and brittle. Ripe beans small, oval, white.

The following are green podded varieties, and are named about in the order of ripening, although this varies in different seasons.

EXTRA EARLY REFUGEE.—This is without any doubt, the earliest of the green podded sorts, and is, indeed, as early as the wax varieties, furnishing a full picking of well developed pods as early as Golden Wax this year, and when ordinary Refugee was only coming into flower. Vines as vigorous, hardy and productive as ordinary Refugee and about the same size, though two weeks earlier. Pods of the same size and shape and of fully as good quality as snaps. Our stock of this has been selected with great care and is extremely uniform, all the vines ripening well together.

EXTRA EARLY RED VALENTINE.—For snaps there is nothing superior to this variety among the green podded sorts and many prefer it to the wax varieties. Vines erect, with coarse, dark green leaves, and large, white blossoms; pods medium length, curved, cylindrical, with crease in

GODDARD, OR BOSTON FAVORITE.—Vines large, much branched, often having short runners; leaflets large, much crimped, bright green; flowers light purplish-pink. Pods large, long, flat, usually curved to one side, with long, curved points; green when young, but as the beans become fit for use are beautifully splashed and striped with crimson. Dry beans marked like Dwarf Horticultural and of the same color, but are long and much larger. When fit to shell green they are almost as large as the Large Lima and of nearly as good quality. Certain to give satisfaction wherever the Dwarf Horticultural does and owing to its larger pods and beans is better for market use.

EARLY YELLOW KIDNEY SIX WEEKS.—Vines large, vigorous, branching, productive, with large leaves and lilac blossoms, pods long, straight, narrow, handsome, and when young, of good quality; beans long, kidney shaped, yellowish-drab with darker marks about the eye.

REFUGEE, OR THOUSAND TO ONE.—Vines large, spreading, exceedingly hardy, with small, smooth leaves and large lilac flowers, very late, and esteemed for late planting and for use as pickles; pods long, cylindrical, green, becoming white, streaked with purple, of good quality as snaps; beans long, light drab, dotted and splashed with purple.

GALEGA.—Although similar to the Refugee, this is distinctly larger growing and more vigorous, and with us has proved decidedly more prolific.

The following sorts are planted as field beans:

ROYAL DWARF KIDNEY.—Not as productive as some of the following, but of very superior quality. Plant large, branching, with large, broad leaves and white flowers; pods medium sized, variable in shape, dark green, coarse; beans large, kidney shaped, slightly flattened and of excellent quality, green or dry.

LARGE WHITE MARROW, OR MOUNTAIN.—Vines large, slender, spreading, with short runners, small leaves and small white blossoms; very prolific; pods

medium sized, broad, green, changing to yellow; beans large, clear white, ovoid, cooking very dry and mealy.

EARLY ROUND POD VALENTINE

EARLY YELLOW KIDNEY SIX WEEKS

back, very fleshy, crisp and tender; beans medium sized; long, irregular, pink, mottled with red. Our stock is all strictly extra early, having round, fleshy pods and will be found equal, if not superior, to any "Improved Round Pod" stock offered.

EARLY YELLOW SIX WEEKS, IMPROVED ROUND POD, NEW.—While this variety does not differ from the Early

Yellow Kidney Six Weeks in size or general appearance of the vine, the pods are shorter, very much thicker and more fleshy, are entirely stringless and remain in condition for use a much longer time. Moreover it is fully one week earlier than ordinary six weeks, while retaining all the vigor, hardiness and prolificness of that variety. Dry bean, color of ordinary six weeks, but is much shorter, almost round. Those who have objected to the ordinary Yellow Six Weeks, owing to the pods becoming tough and stringy so quickly, will find this sort unobjectionable in that regard, while its extreme earliness makes it one of the most desirable of the green pods for early market use.

EARLY MOHAWK.—The hardiest of any and the best to plant on poor land, and it can frequently be planted so as to afford beans earlier than the above more tender sorts. Vines large, stout, with large, coarse leaves, which will stand a slight frost; blossoms large, purple; pods long, straight, coarse, with long, tapering point; beans long, kidney shaped, variegated with drab, purple and brown. This variety is much in favor for forcing under glass, as it matures quickly and carries a good weight of long, large pods.

CHINA RED EYE.—Vines medium, stout, erect, healthy, with large leaves and white blossoms; pods short, straight, flat, and if picked young, of good quality as snaps; beans medium size, oblong, white, with reddish purple blotch about the eye. When green they are thin skinned, mealy and tender, and when dry are still the best of all for baking. Farmers who want to plant a few beans for home supply, should by all means, use this sort.

DWARF HORTICULTURAL.—Vines compact, upright, with large leaves, very productive, and furnish green shelled beans the earliest of any. Pods medium length, cylindrical, curved, with splashes of bright red on a yellowish ground. The ripe beans are large, oval, plump, and nearly covered with splashes of bright red. This is undoubtedly the best variety as a green shelled, and when in this condition the beans are very large, easily shelled, and although of quite different form, are about equal to the Lima in quality.

REFUGEE

EARLY MOHAWK

EARLY MARROW PEA, OR DWARF WHITE NAVY.

—A variety developed in western New York, and not only a surer cropper and much more prolific, but of better quality than the common white bean, and the beans are so hard as to resist the attacks of the bean weevil. Vines large, spreading, with occasional runners and small, thin leaves, and small, white flowers; very prolific, ripening its crop early and all at once; pods short, straight, small, but containing six beans; beans small, oval, white, handsome and of superior quality.

DWARF HORTICULTURAL

BEANS.

POLE, OR RUNNING.

French, *Haricots a rames*. German, *Stangenbohne*.

CULTURE.—These are even more sensitive to cold and wet than the dwarf varieties, but are of superior quality and productivity. After settled warm weather, set poles four to eight feet long in rows north and south four feet apart, the

poles being three feet apart in the row, and set leaning to the north at an angle of about thirty-five degrees. Set in this way, the vines climb better, bear earlier, and the pods are straighter and more easily seen. Around each hill plant five to eight beans two inches deep. Don't worry about getting the "eyes" down, they will grow just as well lying flat. When well started, thin to four plants, and start any that fail to climb around the pole in the same direction as the others, for they will not grow if tied up in the opposite direction. A good way is to plant in rows in drills, planting thickly enough so that there will be one plant to eight or ten inches. Set posts five feet high firmly at each end of the rows, and drive stakes made of 2 x 2 lumber at intervals of sixteen feet along the rows. Stretch a wire (10 or 12 size), between posts along each row and fasten to the tops of the stakes in the row with wire staples. Run a lighter wire or twine along the row about six inches from the ground and fasten to the posts and stakes with wire staples. Tie the cotton string to the wire above and the wire or twine below, wherever there is a plant. The vines will run up these until they reach the top wire, when they will take care of themselves; or omit the lower wire or twine and tie the cotton string to the wire on top of the posts and to a small peg or stick stuck in the ground by the side of each plant. A pint or single packet of each of four or five varieties will be sufficient for a large family.

RHODE ISLAND CREASE BACK.

EARLY GOLDEN CLUSTER WAX.

BROCKTON POLE.

EARLY GOLDEN CLUSTER WAX.—This is now a well known and highly prized variety. In earliness it leads all the pole beans, coming in only a week later than our Golden Wax bush bean. Vines large, strong growing, vigorous, hardy; leaflets large, light green, crimped; flowers yellowish-white; pods six to eight inches long, borne in abundant clusters, each containing from three to six pods, broad, very thick and fleshy, deeply creased along the edge to which the beans are attached, much curved; color bright golden yellow; of the very best quality, and staying in condition for use a long time. The beans are also excellent shelled green. We recommend this variety for universal planting. It will give a crop of the most beautiful pods when other pole beans fail.

WHITE CREASE BACK.—Vines small to medium, but vigorous, and in good soil wonderfully productive, bearing pods in clusters of from four to twelve. Pods medium length, green, of the best quality as snaps, and stand shipping

better than most sorts. The beans are too small to be of much value when shelled green, but are of very superior quality baked. When dry they are small, oval, very white and hard. This variety is especially valuable for its extreme earliness and its habit of perfecting all of its pods at the same time.

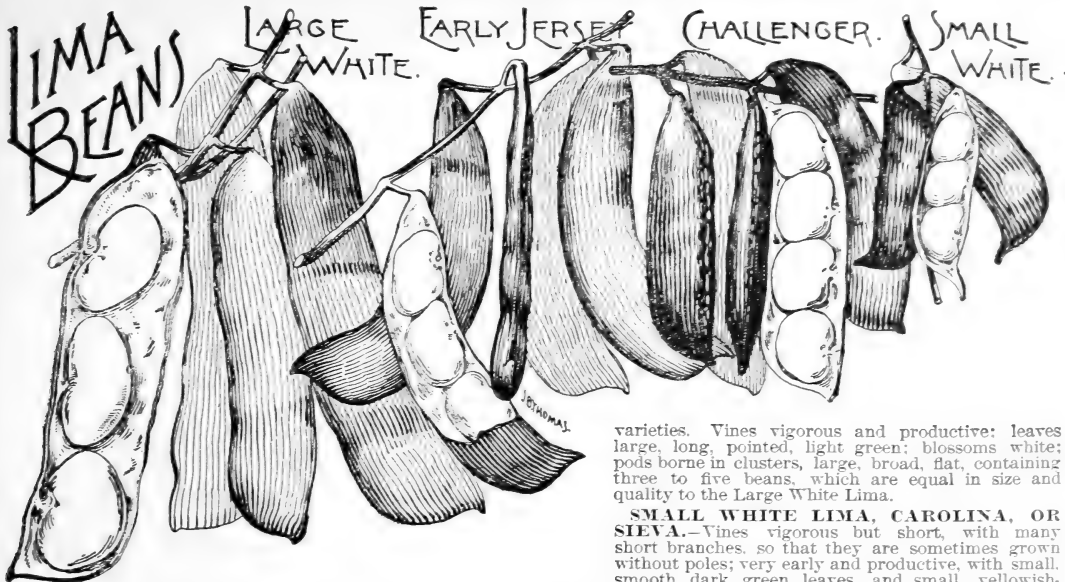

DUTCH CASE KNIFE.—Vines moderately vigorous, climbing well but not twining so tightly as some, and so may be used for a corn hill bean. Leaves large, crumpled; blossoms white; pods very long, flat, irregular, green, but becoming cream white; beans broad, kidney shaped, flat, clear white, and of excellent quality green or dry.

RHODE ISLAND CREASE BACK.—Vines large, vigorous and strong climbers, being the strongest grower and most continuous bearer of the pole varieties. Pods large, flat, green, of medium quality as snaps, but easily shelled for green beans, which are large, long, flattened and equal in quality to the Horticultural. The dry beans are mottled brown in color and of good quality baked. The strong points of this variety are the vigor and long sustained productiveness of the vines and the fine quality of the green shelled beans.

LONDON HORTICULTURAL, OR SPECKLED CRANBERRY.—Vines moderately vigorous, with large, light colored leaves and purple blossoms; pods short, broad, pale green, but becoming streaked with bright red; beans large, ovate, splashed and spotted with wine red, and of the highest quality either green or dry, many people esteeming them better than the Limas

INDIAN CHIEF, OR TALL BLACK WAX.—Vines large, but frequently not climbing well, with rough leaves and light purple blossoms; pods short, broad, flat, fleshy, white, very wax-like, and of superior quality as snaps, remaining in suitable condition longer than most varieties; beans indigo blue, medium sized, oblong, shortened abruptly at the ends.

BROCKTON POLE.—This bears the same relation to the Horticultural pole that the Goddard does to the dwarf Horticultural, being stronger growing, more vigorous and productive. Vines grow large, taking the poles well; pods five to six inches long, broad, much curved, and as they mature becoming splashed with bright crimson, giving them a very attractive appearance. Dry beans large, kidney-shaped, chocolate-brown, splashed with dark purple. As a shell bean this is in every way equal to the Horticultural pole, and owing to its superior hardness and productiveness we believe that it will give more general satisfaction.

SOUTHERN PROLIFIC.—A very prolific sort, and popular in the south for snaps. Vines vigorous, with large, thin, smooth leaves; blossoms white, growing in fours; pods green, cylindrical or thicker than broad, long, fleshy, crisp and excellent; beans small, oval, dun colored, veined with a darker shade.

KENTUCKY WONDER.—Vines vigorous, climbing well and very productive, bearing its pods in large clusters; blossoms white; pods green, very long, often reaching nine or ten inches, nearly round when young, and very crisp, becoming very irregular and spongy as the beans ripen. Dry beans long, oval, dun colored. A very prolific sort, with very showy pods.

RED SPECKLED CUT SHORT, OR CORN HILL.—An old variety, very popular for planting among corn, and it will give a good crop without the use of poles; vines medium, not twining tightly, with dark colored, smooth leaves and white blossoms in small clusters; pods short, cylindrical and tender; beans nearly oblong, cut off diagonally at the ends, white, covered at one end and partially over the whole surface with reddish-brown dots.

EARLY JERSEY LIMA.—An improved strain of the Extra Early Lima, and is the earliest of the large seeded

varieties. Vines vigorous and productive; leaves large, long, pointed, light green; blossoms white; pods borne in clusters, large, broad, flat, containing three to five beans, which are equal in size and quality to the Large White Lima.

SMALL WHITE LIMA, CAROLINA, OR SIEVA.—Vines vigorous but short, with many short branches, so that they are sometimes grown without poles; very early and productive, with small, smooth, dark green leaves, and small, yellowish-white blossoms; pods short, curved, thin, flat; beans white, small, broad, kidney-shaped, but inferior in quality to the other Limas.

DREER'S IMPROVED LIMA.—Vines vigorous and productive, with pointed leaves and white blossoms in racemes; pods short, broad, straight; beans medium size, broad and much thicker than the Large Lima.

CHALLENGER LIMA.—Similar to, but a decided improvement on Dreer's Improved. The vines are more prolific and the pods are larger, though of the same shape. Dry beans larger and of the best quality. We cannot say too much in favor of this bean. It is early and continues bearing its closely crowded clusters of pods until cut off by frost. Market gardeners in the vicinity of New York are not willing to plant any other variety of Lima, as they claim this to be incomparably more profitable. It is also a sure cropper in the South. This is a strong point in its favor, as the Large Lima is quite uncertain in many portions of that section.

LARGE WHITE LIMA.—Too late for the extreme north, but the standard for quality. Vine tall growing, vigorous, but slender; leaves medium sized, smooth, light green; blossoms small, white; pods borne in clusters, long, broad, very thin, dark green; beans large, ovoid, kidney-shaped, greenish-white, flat.

KING OF THE GARDEN LIMA.—Claimed to be larger, stronger growing, more productive, and with larger pods and beans than the Large White Lima. On account of its large pods it is a favorite with market gardeners in many places. Our stock is from the originator and should be as good as any in the market. It will come into bearing sooner, and will make larger pods if not more than two vines are left to grow on a pole.

WHITE RUNNER.—Cultivated chiefly for its flowers. Vines and leaves large and coarse; blossoms in long racemes, large, pure white; pods large, broad, coarse; beans large, kidney shaped, thick, white, fair quality.

SCARLET RUNNER.—Similar to the last, but with scarlet blossoms, and the beans are lilac-purple, variegated with black.

BEET.

French, *Betterave*. German, *Runkel-Rube*.

CULTURE.—The best results are obtained on a deep, rich, sandy loam. If wanted very early, sow in hot-beds and transplant, cutting off the outer leaves; or for general crop, sow as soon as the ground will permit in drills eighteen inches apart and thin out to three inches in the row. For winter use, the turnip varieties may be sown in June. If possible, always sow in freshly prepared soil, which should be pressed firmly over the seed. A supply may be had for winter use by storing the turnip, half long or long varieties in a cellar and keeping covered with sand, earth or sods, to prevent wilting, or they may be kept out doors in pits such as are used for apples and potatoes. One or two ounces or single packets of four or five sorts will give a good supply.

EXTRA EARLY EGYPTIAN BLOOD TURNIP.—By many considered the best variety for forcing, being very early with small top; leaf stems and veins dark red; leaf dark green, dotted with red; roots very dark red, rounded on top, but flat beneath, with very small tap roots; flesh dark red, zoned with lighter shade, hard, crisp and tender when young, but becoming woody with age.

KING OF THE GARDEN LIMA.

EARLY ECLIPSE.—An improved extra early sort. Tops small, dark red shading to green on outside of the leaves. Roots nearly globular with a small tap root and very small collar. Flesh dark red, zoned with a lighter red, very sweet, crisp and tender, especially when young. One of the most desirable sorts for bunching.

IMPROVED EARLY BLOOD TURNIP.—Excellent for forcing or early planting out doors, as it follows Egyptian very closely and is beyond doubt the best second early beet in existence. Tops small, upright growing, so that the rows may be close together, leaf stems and veins dark red, blade green; roots globular or ovoid; color of skin dark blood red, flesh bright red, zoned with a lighter shade, very crisp, tender and sweet, and remaining so for a long time, as it is a good keeper. We know of no summer beet which will be more satisfactory than this, either for market or family use.

EDMAND'S EARLY BLOOD TURNIP.—This beet of American origin, has by careful selection, been brought to a uniformly smooth root and small top, making it among the best for early table use. Tops low, small spreading leaf stalks and ribs dark red; blade of leaf bright green, and having a markedly wavy edge; roots dark red, interior color dark purplish red, zoned with a lighter shade, crisp, tender, sweet and an excellent keeper. One of the best, either for summer or winter use.

DEWING'S EARLY BLOOD TURNIP.—Tops medium sized; leaf stems and veins dark red; leaves green; roots dark red, turnip shaped with large tap; flesh carmine red zoned with lighter shade, tender, sweet and a good keeper.

BASTIAN'S EARLY BLOOD TURNIP.—Tops small, stems purplish-pink, leaves green, roots turnip-shaped with medium sized tap, bright red. Flesh purplish-red, zoned with white, crisp, tender and of good quality.

EARLY BLOOD TURNIP.—Tops and necks medium sized; leaf stems and veins red with green or red leaves; roots turnip-shaped, deep purple, flesh blood red, zoned with lighter color, crisp, tender and sweet.

EARLY TURNIP BASSANO.—Not maturing as early as the above, but growing to a large size, may be used early, and is the best variety to sow for greens. Tops large; leaf stems light red; leaves light green; roots large, round, turnip-shaped; flesh pink, zoned with white, very sweet and tender when young, becoming woody and tasteless with age.

D. M. FERRY & CO'S NEW HALF LONG BLOOD.—This is an entirely new and distinct variety, by far the best for winter use. The roots are about one-half as long as the Long Dark Blood, but weigh as much on account of their thickness. They are always smooth and handsome, and their rich, dark red flesh is very sweet, crisp and tender, never becoming woody, even in portions above ground. We consider this the most valuable sort of recent introduction.

IMPROVED LONG DARK BLOOD.—The most popular variety for winter use. Tops large; neck small;

leaf stems and veins red; leaf green; roots large, tapering toward both ends, growing even with the surface, dark red, flesh dark red, zoned with lighter shade, very tender and sweet, and remaining so when kept till spring.

SWISS CHARD, SILVER OR SEA KALE BEET.—A distinct vegetable and much superior to the common beet for greens. If sown at the same time it will be fit for use before it. Later, the plants form a broad, flat, beautiful white and wax-like stems to the leaves, which are very delicious cooked as beets, or pickled. We recommend all of our customers to try it.

The following varieties are used for stock feeding. They are easily grown and harvested, keep well through the winter and give an immense amount of cattle food at a small cost, but need a rich, well prepared soil. Sow in drills thirty inches apart, as early as the ground can be got in condition. Cultivate well when young, and thin out the plants to one foot apart in the row. If these thinnings are carefully handled and the larger leaves cut off they can easily be reset to fill vacancies, and will make the largest roots. Care should be taken not to break or bruise the roots in harvesting.

FRENCH WHITE SUGAR, RED TOP.

FRENCH WHITE SUGAR, RED TOP.—This variety is the result of the careful selection and culture of one of the most extensive and scientific cultivators in Europe. It unites capacity for a large yield with an exceedingly rich flesh, making it the best for cattle feeding. We think that for this purpose it is much superior to the larger and coarser mangel wurzels, and we urge our customers to try it, believ-

ing that they will find it superior to any field beet they have cultivated. Tops medium sized; roots above medium size, long, top shaped, growing slightly above the surface; white, washed with red at top; flesh fine grained and very sweet.

FRENCH YELLOW SUGAR.—Grows to a large size, much above ground; roots half long, yellow; grown in this country for feeding stock. In France it is cultivated extensively for the extraction of sugar.

LANE'S IMPROVED IMPERIAL SUGAR.—This American variety has proved the best for the uses which such beets are put to in this country. It is not so sweet as the French Sugar beets grown especially for sugar making, but the roots are longer and more symmetrical, of fine grain and very sweet, making it good for table use or for cattle feeding.

VILMORIN'S IMPROVED IMPERIAL SUGAR.—A medium sized white sugar beet, brought by the most careful selection to the highest perfection, both in the constancy of shape, size and color of the roots and their high sugar content. Greatly esteemed by sugar manufacturers.

LONG RED MANGEL WURZEL.—A large, long variety, grown for stock feeding. It stands a good deal out of the ground; color light red; flesh white and rose colored.

D. M. FERRY & CO'S IMPROVED MAMMOTH LONG RED MANGEL WURZEL.—An improvement on the old variety. The roots are uniformly straight and well formed and deeper colored than the common sort. Highly recommended for stock feeding.

NORBITHAN GIANT LONG RED MANGEL WURZEL.—Very large, growing well out of the ground. The roots are well formed, straight, smooth and of a fine scarlet color, with comparatively small top and neck.

YELLOW GLOBE MANGEL WURZEL.—A large, round, orange colored variety, of excellent quality, which keeps better than the Long Red, and produces better crops on shallow soil.

CARTER'S WARREN PRIZE YELLOW GLOBE MANGEL WURZEL.—A most excellent, yellow fleshed, globe variety. The tops are small, and the roots, although large, are of excellent quality. Average weight, fifteen to eighteen pounds. Highly recommended for shallow soil.

YELLOW LEVIATHAN MANGEL WURZEL.—Roots long, olive shaped, large, growing over one-half out of the ground, flesh white, sweet and tender; tops bright green, comparatively small; neck small, short. Owing to the fine flesh never becoming woody, to the small neck and top, and to the roots growing so well out of the ground, making them very easy to harvest,

GOLDEN TANKARD MANGEL WURZEL.

we think this is perhaps the best of the yellow field beets.

YELLOW OVOID MANGEL WURZEL.—Root ovoid, intermediate between the long and globe varieties; flesh solid, usually white, zoned with yellow; hardy, vigorous and productive.

GOLDEN TANKARD MANGEL WURZEL.—Tops comparatively small, with yellow stems and midribs; neck very small; roots large, ovoid, but filled out at top and bottom so as to approach a cylindrical form. Flesh yellow, zoned with white. A great improvement and worthy of trial on every farm.

RED GLOBE MANGEL WURZEL.—Similar to Yellow Globe, except in color, which is a light red or pink.

BROCOLI.

French, *Chou Brocoli*. German, *Spargel-Kohl*.

Although originating from a very distinct type, the modern improved sorts of brocoli can scarcely be distinguished from cauliflower; the points of difference being that it is generally

taller and the heads more divided. By some considered more delicate than the cauliflower.

CULTURE.—The same as that given for cauliflower.

EARLY PURPLE CAPE.—This is the best variety for our climate. It produces large heads, of a brownish-purple color, very close and compact, and of excellent flavor.

Brussels Sprouts.

French, *Chou de Bruxelles*. German, *Sprossen-Kohl*.

The plant grows two or three feet high, and produces from the sides of the stalk numerous little sprouts one or two inches in diameter, resembling cabbages. The leaves should be broken down in the fall, to give the little cabbages more room to grow.

CULTURE.—They should be treated in all respects like winter cabbage or kale.

CABBAGE.

French, *Choux Pommés*. German, *Spargelkohl*.

There is no vegetable which is more universally cultivated than this. It is found in the poorest and smallest garden, and it responds so readily to better care that it is also entitled to a place in the finest garden, and merits the attention of the most skillful gardener.

CULTURE.—The requisites for complete success are: *First*, good seed; there is no vegetable where the seed has more influence on the quality of the product than in this, and gardeners should invariably select the best procurable. *Second*, rich, well prepared ground. *Third*, frequent and thorough cultivation. A heavy, moist and fresh loam is most suitable, which should be highly manured and worked deep. The early sorts should be sown very early in hot-beds, hardened off by gradually exposing them to night air, and transplanted to open ground, setting eighteen to twenty-four inches apart as early as possible in the spring. In the South sow from the middle of September to middle of October, and transplant into cold frames to keep through winter, setting into open ground as early as possible.

The late autumn and winter varieties may be sown from the middle to the last of spring, and transplanted when about six inches high, three feet apart each way. Shade and water the late sowings in dry weather to get them up. It is important that the plants should stand thinly in the seed bed, or they will run up weak and slender, and be likely to make long stems. In transplanting they must be set in the ground up to the first leaf, no matter how long the stem may be.

One of the most successful eastern market gardeners recommends sowing cabbage for family use, as follows: At the desired time sow the seed in drills, thinly, and after the plants are of sufficient size thin to the proper distance in the row, and cultivate as usual. This is a very simple method and saves the trouble and expense of transplanting.

Cabbages should be hoed every week, and the ground stirred as they advance in growth, drawing up a little earth to the plant each time until they begin to head, when they should be thoroughly cultivated and left to mature. Loosening the roots will sometimes retard the bursting of full grown heads.

Of late years many crops of early cabbage have been destroyed by maggots at the roots. The best remedy seems to be to remove the earth from around the stem and apply an emulsion of kerosene made as follows: Add one quart of kerosene oil to two quarts of boiling soft soap which has been thinned to the consistency of cream. Stir the oil thoroughly by churning or other method until it has united with the soap and forms a butter-like substance. Then dilute with five times as much water.

Ashes, slaked lime and coal dust are all recommended as preventatives. These are scattered about the plants, leaving one here and there untreated for the flies to congregate around and deposit their eggs upon, when they should be pulled up and destroyed.

The cabbage worms which destroy the leaves and heads later, may be killed by dusting with pyrethrum powder.

To preserve cabbage during the winter, pull them on a dry day, and turn them over on the heads a few hours to drain. Set them out in a cool cellar, or bury them, with the heads downward, in long trenches, in a dry situation. In the Middle States, bury the head and part of the stump in the open ground, and place over them a light covering of straw or boards, to protect them in severe weather.

EXTRA EARLY EXPRESS.—This is claimed to be the earliest cabbage in cultivation, and with us heads fit for use are formed earlier than on any other sort. It is similar to the Etampes, but is a little lighter in color and the heads are a little harder. Worthy of trial by those who wish to be first in the market.

VERY EARLY ETAMPES.—Similar to the well known Jersey Wakefield, but repeated tests both on our grounds and at the various experimental stations have shown that it will produce heads fit for use a little earlier. The plants are lighter colored but not quite so hardy. The heads are fully as large, not quite so pointed, and are of excellent quality.

EARLY
WINNIGSTADT

and we recommend it as the best for private gardens and sheltered situations. Used in the south by gardeners for their early crop to ship north. Sold also as "Earliest of All," "Wonderful," etc.

EARLY JERSEY WAKEFIELD.—Heads very compact, of medium size, conical. An early, sure heading sort; very popular with market gardeners. Its thick, stout leaves, combined with its very compact growth, make it the best for wintering over in cold frames, or for very early setting in the spring. Unfortunately the great demand for this sort has brought upon the market large quantities of coarse and inferior stock, which has tended to diminish the popularity of the sort; but when pure and good stock, such as we offer, is used, it cannot fail to give perfect satisfaction as the best first early cabbage for market gardeners.

EARLY YORK.—An early variety. Heads small, heart shaped, firm and tender; of very dwarf growth, and may be grown fifteen or eighteen inches apart.

EARLY DWARF FLAT DUTCH.—Each year adds to the high opinion we hold of this variety as a second early, sure heading, reliable cabbage, and we consider it one of the very best to follow Early Jersey Wakefield, either for market or private use. Stems short, leaves comparatively few, having short stalks, upright, so that plants can be planted closely; heads large as early summer, solid, and stand long without bursting. Our stock should not be confounded with the inferior later stocks offered under this name.

EARLY LARGE YORK.—Succeeds the Early York. It is of large size, about ten days later, more robust and bears the heat better.

HENDERSON'S EARLY SUMMER.—A very early, large heading cabbage; growth compact, so that it may be set as close as the smaller sorts. Heads large, flat or slightly conical, and they keep longer without bursting than most of the early sorts. Valuable for both family and market. This may be called an improvement on the Newark Flat Dutch, which it has superseded.

ALL SEASONS.—A greatly improved strain of early Flat Dutch. Heads very large, round, often nearly spherical, but usually somewhat flattened; very solid, and of the best quality, keeping as well as the winter sorts. Plant very vigorous but sure heading; leaves large, smooth, with dense bloom. Remarkable for its ability to stand the hot sun and dry weather. Our trial has shown that heads which were fit for market by July 10th, were still salable September 10th, the only change being increased size and density. One of the very best sorts for general cultivation.

SUCCESSION.—A sure heading, long keeping variety, very similar in every respect to All Seasons. Our seed is from carefully grown selected stock and will be found fully as good as that offered by any one.

EARLY WINNIGSTADT.—One of the best for general use, being a very sure header, and will grow a hard head under circumstances where most sorts would fail, so that those who have failed with other sorts could hope to succeed with this. It seems to suffer less from the cabbage worm than any other sort. Heads regular, conical shaped, very hard, and keep well both summer and winter.

FILDERKRAUT.—Similar to, but larger, much more pointed, and heading up with fewer outside leaves than the Winnigstadt, and highly esteemed for making kraut. Good either for first or second crop, and succeeds particularly well on rich prairie soils.

FOTTLER'S EARLY DRUMHEAD, OR BRUNSWICK SHORT STEM.—In many sections, particularly in the East, this is the only cabbage grown, and it certainly is one of the very best second early sorts in cultivation. Plants have very short stems and large leaves which start from the stem horizontally, but turn upward beyond the head, making it remarkably compact. Head large, very flat, compact and solid, and of fine quality. We have taken pains to have our stock free from the longer stemmed coarse plants often seen in inferior stocks of this variety.

EARLY DRUMHEAD.—Plants compact, with very thick, dark green leaves covered with a dense bloom which protects them in a measure from the worms. Heads flat, very solid and of good quality.

EARLY LARGE SCHWEINFURT.—Forms a very large, showy head of excellent quality, but does not stand the heat well. When grown to perfection, one of the handsomest of the second early sorts.

STONE MASON MARBLEHEAD.—Characterized by its sweetness and delicacy of flavor and by its reliability in forming a large head. Very hardy and will endure the cold of extreme northern climates.

LATE FLAT DUTCH.—A low growing variety; heads large, bluish-green, round, solid, broad and flat on the top, and often tinted with red and brown. An excellent fall and winter variety and a good keeper.

D. M. FERRY & CO'S PREMIUM LATE FLAT DUTCH.—This we consider superior to any late cabbage in cultivation. It possesses all the good qualities of the Late Flat Dutch, and is a sure header. Our stock of this variety is of our own raising from carefully selected heads, and we think it superior to any other strain of this popular variety.

LARGE DRUMHEAD.—The Drumhead cabbage is a large fall or winter variety, with a broad, flat or round head, short stump, tender and good flavored, and an excellent keeper; grown extensively for shipping purposes.

D. M. FERRY & CO'S PREMIUM LATE DRUMHEAD.—We recommend this sort to market gardeners and growers for shipping purposes. In good, rich soil, and with a favorable season, the heads will grow to an enormous size; very compact and solid, and of excellent flavor.

MARBLEHEAD MAMMOTH DRUMHEAD.—The largest cabbage known, weighing in some instances over fifty pounds. Under good cultivation, acres have been grown where the heads would average thirty pounds each.

QUINTAL DRUMHEAD.—A French variety corresponding to our Flat Dutch, and one of the best of the foreign sorts. Heads quite flat on the top, with few outside leaves; solid, firm, hard, and of good flavor.

GREEN GLAZED.—A standard late variety in the South, as it is not affected by the heat. Heads large, but rather loose and open. Very desirable, from the comparative immunity it enjoys from the attacks of insects.

MAMMOTH ROCK RED.—This is by far the best, largest and surest heading red cabbage ever introduced. The plant is large, with numerous spreading leaves. The head is large, round, very solid, and of a deep red color. Ninety-eight per cent. of the plants will form extra fine heads. The best of the red cabbages.

LARGE RED DRUMHEAD FOR PICKLING.—Excellent for pickling or for eating raw. Forms very hard, oblong heads, round at top, of a dark red, or purple color.

EARLY DEEP RED ERFURT.—Plants smaller and more compact and shorter stemmed than the above, and the head is smaller, nearly round or sometimes oval, very hard and of exceedingly deep color, and one of the best keepers. Very desirable.

The English prize the savoy cabbages especially on account of their delicate cauliflower-like flavor, and as they become better known in this country they grow rapidly in favor with discriminating buyers.

EARLY DWARF ULM SAVOY.—One of the earliest and sweetest of the Savoys. Heads round, solid; leaves small, thick, fleshy, of fine, deep green color, and of most excellent quality.

GREEN GLOBE SAVOY.—This does not make a firm head, but the whole of it being very tender and pleasant flavored, is used for cooking; leaves wrinkled and dark green; is very hardy and improved by frost.

IMPROVED AMERICAN SAVOY.—Closely approaching the Cauliflower in delicacy of flavor. The best of all the Savoys for general market or home use. It has a short stem, grows to a large size, is compact and solid, and is a sure header.

DRUMHEAD SAVOY.—Grows to a large size. Heads nearly round, a little flattened on the top, color dark green.

CARROT.

French, *Carotte.* German, *Moehren.*

The carrot is one of the most wholesome and nutritious of our garden roots, and deserves to be more extensively used both for culinary and stock feeding purposes. We urge our readers to give some of the early table sorts a trial. For feeding stock, especially horses and milch cows, the carrot cannot be surpassed, and it should be grown largely by farmers each season for this purpose.

CULTURE.—While a sandy loam made rich by manuring the previous year is the best soil for the carrot, any good land if

thoroughly and deeply worked will produce satisfactory crops. A clover sod turned under deeply and well enriched with a dressing of rotten manure is most excellent for the general crop. When it is possible to do so, it is advisable to sow as early in the spring as the ground is fit to work, though good crops may be grown after the 15th of June in this latitude. Prepare the ground thoroughly and sow in drills eighteen to twenty-four inches apart, using about three pounds of seed per acre. Cover one-half to one inch deep and see to it that the soil is well firmed about the seed. As soon as the plants appear, start the cultivator or wheel hoe and do not let the weeds get a start. Thin to three to six inches apart in the rows as soon as the plants are large enough. Gather and store for winter use like beets or turnips.

EARLY SCARLET HORN

EARLIEST SHORT HORN (FOR FORCING).—The earliest variety in cultivation, and best suited for forcing. Tops small, finely divided; root dark or reddish-orange, globular, two inches in diameter, with slender tap and grooved at the crown.

EARLY SCARLET HORN.—Best for early planting out of doors. Tops small, coarsely divided; roots top shaped, but tapering abruptly to a small tap; surface dented, skin orange-red.

EARLY HALF LONG SCARLET CARENTAN.—Tops very small, roots cylindrical with a remarkably small neck; very handsome, deep orange in color, with scarcely any core, and of the best quality. They can be sown very thick and are well adapted for forcing.

HALF LONG SCARLET NANTES, STUMP ROOTED.—Tops medium; roots cylindrical, smooth, bright orange; flesh orange, becoming yellow in center, but with no distinct core; of the finest quality. This and the preceding are the varieties so extensively used in France for culinary purposes, and only need to be known to supersede the coarser sorts for garden culture.

CHANTENAY.

CHANTENAY.—Tops medium size; necks small; roots tapering slightly but uniformly stump rooted and smooth; color deep orange red; flesh very crisp and tender. While this is a medium early sort, it furnishes roots of usable size as early as any, is a heavy cropper, and is undoubtedly one of the best for both the market and private gardener, while its great productiveness makes it very desirable as a field sort.

EARLY HALF LONG SCARLET, STUMP ROOTED.—Excellent for early market or for field culture on shallow soils. Of medium size, flesh bright scarlet, brittle and of fine flavor.

EARLY HALF LONG SCARLET, STUMP ROOTED.

GUERANDE, OR OX HEART.—Tops small for the size of the root, specimens of which have been grown which were over seven inches across. They are broad, top shaped, the diameter often exceeding the length and terminate abruptly in a small tap root, and by reason of their shape, very easily dug. Flesh bright orange, fine grained and

sweet. This is a desirable variety on soils too hard and stiff for the longer growing sorts, as it is not over five or six inches long. It frequently grows as thick as long, thus making it really as large as the longer sorts. When young, excellent for table use, and when mature equally good for stock.

DANVERS.

DANVERS.—Grown largely everywhere on account of its great productiveness and adaptability to all classes of soils. Tops medium size, coarsely divided; roots deep orange, large but medium length, tapering uniformly to a blunt point, smooth and handsome; flesh sweet, crisp, tender and of a deep orange color. This variety produces as large a bulk with as short roots as any, making it cheaper to grow than the longer sorts.

LONG ORANGE.—A well known standard sort. Roots long, thickest near the crown, tapering regularly to a point; color deep orange. It requires a deep soil, and the plants should stand eight inches apart, in eighteen inch drills, for the roots to attain their full size.

IMPROVED LONG ORANGE.—An improvement on the preceding, obtained by careful selection for years of the best formed and deepest colored roots. Roots proportionately shorter than the Long Orange, and smoother, but so uniform and true that the bulk of the crop will be greater. The most desirable sort for farm use on mellow soils.

LARGE WHITE VOSGES.—Roots very large, similar in shape, although more pointed than the Guerande. Skin and flesh white, and the latter is of much better quality than that of other white varieties, so that it is often used for the table. Easily dug, and a very distinct, valuable variety.

D. M. FERRY & CO'S IMPROVED SHORT WHITE

D. M. FERRY & CO'S IMPROVED SHORT WHITE.—This is a new and distinct variety, which is, we think, destined to take first rank as a field carrot, owing to its enormous productiveness and its growing well out of the ground, making it comparatively easy to harvest. Roots one-half long, very heavy at the shoulder but taper regularly to the point, smooth; color light green above ground, white below; flesh rich, white, solid and crisp and of excellent flavor. This variety is a real acquisition as a heavy yielding, easily harvested, white carrot and is the best of this class.

LARGE WHITE BELGIAN.—Grows one-third out of the ground. Root pure white, green above ground, with small top. Flesh rather coarse, but the roots on light, rich ground grow to a large size, and are extensively grown for stock feeding.

CAULIFLOWER.

French, *Chou-fleur*. German, *Blumen-Kohl*.

The cauliflower, although one of the most delicious vegetables, is but little grown except by professional gardeners, by reason of the erroneous notion that it is especially difficult to manage and requires the aid of a skilful grower to bring it to perfection. We are certain that anyone will be reasonably successful with this most desirable vegetable if they will observe the cultural directions given below.

CULTURE.—For spring and early summer crop sow in March or early in April in hot-bed and transplant to cold frame when sufficiently large and to the open ground when the weather is warm enough. The soil for cauliflower should be like that for cabbage, but it is better to be made richer than is ordinarily used for that crop. Give the plants thorough culture and keep free from worms with Bubach or insect powder. For late crop sow at same time as for late cabbage and treat in the same manner. It should be borne in mind that cauliflower *will not* head up well in hot, dry weather and hence the sowings should be so regulated as to bring it in either in early summer or late fall. No crop responds more generously to the liberal use of water than this, and its frequent, thorough use will generally be repaid in the larger yield. Nine-tenths of the crops produced in this country are grown without any other watering than the ordinary rainfall, however. After the heads begin to form draw the leaves over them and pin or tie them together to protect from the sun and keep them white. They should be cut for use while the "curd" is compact and hard, as they soon become tough and bitter after they open and separate into branches.

Our cauliflower seed is produced by the most experienced growers in Europe, in such localities as are best suited to its proper development and the greatest care is taken to save seed from nothing but perfectly developed plants. It can therefore be relied upon to give entire satisfaction if properly planted and cared for.

EARLY SNOWBALL.—Probably grown more than all other varieties together for forcing or wintering over for early crop. It is exceedingly early and hardy and is one of the surest to make a solid, compact head. For these reasons it is growing also more and more in favor for planting for the late summer and fall crop. We have taken great pains to secure the best seed procurable and confidently recommend it as equal to that offered by anyone.

EARLY SNOWBALL.

EXTRA EARLY DWARF ERFURT.—Our stock is almost as early as Early Snowball and is very desirable for forcing or for planting out doors. Plants compact with few narrow, upright leaves, making it the best for close planting;

forms solid, compact heads under very unfavorable conditions and is therefore one of the most desirable for general use. We think our stock of this is unsurpassed.

FERRY'S EARLY PURITAN.—We have given a great deal of attention to securing an extra early, sure heading cauliflower, and think we have in this strain all the requirements of a first class forcing sort. Plants upright, compact, short stemmed, producing large heads of fine color when properly blanched.

EXTRA EARLY PARIS.—Heads large, white, compact and solid, of excellent flavor, tender and delicious. Leaves large, stock short. Being so early, it must always be a favorite, especially with market gardeners.

EARLY ERFURT.—One of the best for general cultivation. Heads large, close, compact and very white.

EARLY LONDON.—This is a standard variety; very tender and quite early; heads compact, solid and of delicious flavor; good for general use.

EARLY LONDON.

EARLY PARIS, OR NONPAREIL.—A most excellent French variety with good sized, uniform, close heads, which are tender and delicious. Planted at the same time with the Extra Early Paris, it will afford a succession.

LE NORMAND'S SHORT STEM.—Considered by the French one of the very best sorts. Plant hardy, semi-dwarf, sure heading, and producing many leaves, which protect the close, solid curd, keeping it well blanched.

LARGE ALGIERS.—A valuable late sort, sure to head, of the best quality, and very popular with market gardeners everywhere. One of the very best.

VEITCH'S AUTUMN GIANT.—A distinct and valuable late variety. The heads are very large, beautifully white, firm and compact, and being well protected by foliage, remain a long time fit for use. The plants should be started and transplanted early in the season, to insure their full development.

CELERY.

French, *Celeri*. German, *Sellerie*.

Celery has come so generally into use that almost every garden has a bed devoted to its growth, and certainly no part of the garden will afford a better return in a wholesome and delicious relish to every other variety of food.

CULTURE.—Sow the seed (which is slow to germinate) in shallow boxes, or in a finely prepared seed bed out of doors, in straight rows, so that the small plants may be kept free from weeds. When about two inches high, thin out and transplant so that they may stand two inches apart, and when the plants are four inches high, cut off the tops which will cause them to grow stocky. The crop is usually made to succeed some earlier crop and if good plants are used they may be set out as late as the middle of August, but the best results are usually obtained from setting about the middle of June or first of July. The most desirable time will depend upon local climate, and is that which will bring the plants to maturity during cool, moist weather. In setting, prepare broad, shallow trenches about six inches deep, and four feet apart, in which the plants should be set six inches apart, cutting off the outer leaves and *pressing the soil firmly about the roots*. When the plants are nearly full grown they should be "handled," which is done by one man gathering the leaves together, while a second draws the earth about the plant to one-third its height, taking care that none of the earth falls between the leaves, as it would be likely to cause them to rust or rot. After a few days draw more earth about them and repeat the process every few days until only the tops of the leaves are visible, or the leaves may be pressed together by two wide boards held firmly a few inches apart by cross

ties and stakes, when in a few days more it will be fit for use. Care should be taken that the plants are not disturbed while they or the ground are wet, as it would be sure to injure them. A part of the crop may be simply "handled" and then at the approach of severe freezing weather, taken up and set out compactly so that all but the tops of the leaves can be covered with sand, in a dark cellar or an unused cold frame, which can be kept just above the freezing point, and it will then gradually blanch so that it may be used throughout the winter.

GOLDEN YELLOW LARGE SOLID.—Sold also as Golden Self-Blanching and is beyond doubt the best celery for early market use. Plants of a yellowish-green color when young, but as they mature the inner stems and leaves turn a beautiful golden yellow, which adds much to their attractiveness and makes the work of blanching much easier. The handsome color, crispness, tenderness, freedom from stringiness and fine nutty flavor of this variety make it only necessary to be tried in a given locality in order to establish its standard of excellence as an early sort.

GOLDEN YELLOW LARGE SOLID.

GOLDEN HEART.—A distinct variety of sturdy dwarf habit. It is solid, an excellent keeper, and of fine nutty flavor. When blanched, the heart, which is large and full, is of a light yellow, making this an exceedingly showy and desirable variety for both market and private use.

BOSTON MARKET.—For many years one of the most popular sorts in the markets of Boston. It forms a cluster of heads instead of a single large one, and is remarkably tender and crisp. The best variety for light soils.

DWARF WHITE SOLID.—Dwarf, white, of stiff, close habit; solid, crisp and of fair quality. Said to keep in good condition later in the season than any other variety.

CRAWFORD'S HALF DWARF.—When blanched is of rather yellowish-white color, and is entirely solid, possessing the nutty flavor peculiar to the dwarf kinds, while it has much more vigor of growth, surpassing most of the large growing sorts in weight of bunch.

GIANT PASCAL.—This is a green leaved variety developed from the Golden Yellow Large Solid and has no superior for fall and winter use. It blanches very quickly after earthing up, when it is of a beautiful yellowish-white color, very solid and crisp and of a nutty flavor, which cannot be equaled by any other sort. The stalks grow broad and thick, a single plant making a large bunch. Under high culture this variety will give the best of satisfaction. Especially recommended for the South, where it grows more satisfactorily than almost any other kind.

WHITE PLUME.—While we are fully aware that this variety has great merit as an early market sort, being as early as any and requiring no more labor to blanch it than Golden Yellow Large Solid, and is very attractive when fit for use, yet we do not think that it compares at all favorably with the Golden Yellow either in flavor or solidity, or that it will stay in condition to use nearly so long after it is earthed up. Plants light yellowish-green with tips of leaves almost white. As they mature the inner stems and leaves turn nearly white and require to be earthed up but a short time until they are in condition for use. Where a fine appearing celery at a minimum amount of labor is the object, without much regard to quality, this variety will give entire satisfaction.

WHITE PLUME.

PERFECTION HEARTWELL.—The best flavored, most crisp and tender of the white varieties. The plants are a little taller than the Crawford's Half Dwarf, and a little later in maturing. The stalks are medium sized, round, very solid, crisp and tender, and of exceedingly fine and nutty flavor.

SEYMOUR'S WHITE SOLID.—A large sized, vigorous growing variety; stalks white, round, very crisp, perfectly solid and of superior flavor.

INCOMPARABLE DWARF CRIMSON.—The red varieties keep better through the winter, and are generally considered to be of superior flavor, and they are yearly becoming more popular. This is a dwarf sort, of deep, rich color, very crisp and of the highest flavor.

CELERIC, OR TURNIP ROOTED CELERY.

CELERIAC, OR TURNIP ROOTED.—The root of this variety is turnip shaped, tender and marrow like, having a sweeter taste and stronger odor than other varieties. It is used principally for seasoning meats and soups.

CELERIAC, LARGE SMOOTH PRAGUE.—An improved form of turnip rooted celery, producing large and smooth roots, which are almost round, and with very few side roots. Plants vigorous, with large, deep green foliage.

CHERVIL.

French, *Cerfeuil*. German, *Gartenkerbel*.

A hardy annual much used for flavoring and in salads. The curled variety is quite as useful for garnishing as Parsley.

CULTURE.—Sow in early spring in rich, well prepared soil, and when plants are well established, transplant to about one foot apart.

CHERVIL, CURLED.

CURLED.—Greatly superior to the old plain variety, which it has almost wholly superseded, having fully as fine perfume and flavor, being earlier and much handsomer.

COLLARDS.

A variety of cabbage known in different sections as "Cole" and "Colewort." It is extensively used in the South for "greens," where it continues in luxuriant growth all winter.

GEORGIA, SOUTHERN, OR CREOLE.—This is the variety so extensively used in the South, where it furnishes an abundance of food for both man and beast. Forms a large, loose, open head, or a mass of leaves on a tall stem. Freezing improves their quality. Sow thick, in drills, in rich ground, transplanting when four inches high. In the South, sow from January to May and August to October.

GEORGIA COLLARDS.

CHICORY.

French, *Chicoree*. German, *Cigorien*.

LARGE ROOTED, OR COFFEE.—The dried and pre-

pared roots of this are used quite extensively as a substitute for and adulterant of coffee. Sow the seed as early in the spring as the ground can be prepared, in a rather light, moderately rich soil, in drills fifteen inches apart for garden and two to two and one-half feet for field culture. When the plants are sufficiently large thin to four inches apart in the row. Keep clear of weeds and in the fall dig the roots, slice them and dry in an apple evaporator, or kiln constructed for the purpose. Where the roots are grown in quantity for the manufacturers of the "prepared" chicory, they are usually brought to the factory in the "green" state and there dried in kilns constructed for the purpose.

CORN, BROOM.

Broom Corn is grown as a staple crop in many sections of the country, especially west of the Mississippi river, for the brush and for the seed, which is valuable for stock feed.

CULTURE.—Prepare the ground as for corn and plant about the same time in drills three and one-half to four feet apart and thin to six inches in the row.

DWARF.—Grows from three to five feet high, and produces short, fine brush, suitable for whisk brooms and brushes.

IMPROVED EVERGREEN.—Grows to a height of seven to nine feet; early, and produces a very fine brush of good length and of green color.

CORN SALAD.

FETTICUS, OR LAMB'S LETTUCE.

French, *Mache*, *Salade de ble*. German, *Ackersalat*, *Lam-marsalat*.

This small salad is used during the winter and spring months as a substitute for lettuce and is also cooked and used like spinach. In warm weather the plants will mature in from four to six weeks.

CORN SALAD.

CULTURE.—Sow the seed in shallow drills about one foot apart, during August and September. If the soil is dry, it should be firmly pressed over the seed in order to secure prompt germination. On the approach of severely cold weather, cover with straw or coarse litter. The plants will also do well if the seed is sown very early in the spring, and like most salad plants, are greatly improved if grown on very rich soil; indeed, the ground can scarcely be made too rich for them.

CORN.

French, *Mais*. German, *Mais*.

CULTURE.—A rich, warm, alluvial soil is best, and immediately before planting this should be as deeply and thoroughly worked as possible. Give thorough but shallow cultivation until the tassels appear.

CORY.—A new sort resembling the Marblehead, but of stronger growth, with larger, lighter colored ears, and by far the largest of the extra early sorts. The plant does not sucker so much as the Marblehead, and it will mature a full crop earlier than that variety. All the red cobbled corns should be cooked quickly by dropping the ears into boiling water to which a little salt has been added, for if simmered over a slow fire, or allowed to stand in the water after cooking, the red cob will discolor the kernels.

WHITE COB CORY.—We began selecting this type of Cory several years ago and have not been satisfied to offer it before as the proportion of red cob ears seemed too large to

justify it. We have succeeded in reducing the number to such an extent that there is now only an occasional ear with a red cob and we offer this stock as the purest and best White Cob Cory in the country. The ears are fully as large and well filled, and are just as early as ordinary Cory and have the great advantage of a white cob, which removes the one remaining objection to this variety as the best extra early market corn. We hope all our friends will plant largely of this for early crop, as we feel sure that it will give entire satisfaction.

NORTHERN PEDIGREE.—We have been selecting this corn for three years to a larger ear than the ordinary stock of this variety, while retaining its extreme earliness and now offer it as the best stock to be had of this sort and the earliest sweet corn in existence. Stalks three to four feet high, slender, having few or no suckers; ears short, slender, having a narrow and rather shallow but very white grain, which cooks tender and is of excellent quality. As a first early variety for the home garden this sort has no superior.

EARLY MARBLEHEAD.—Stalk very short, with many suckers from the root; ears medium sized, eight rowed, with few husks; cob red, small; kernel broad, shallow, white or tinged with red. Formerly considered the earliest sort, but clearly later than the Cory.

EXTRA EARLY ADAMS.—Nearly as early as Marblehead, but is hardly of as good quality. It is the standard extra early variety in the South and can be depended on to give a crop there where most other sorts fail. Stalks very short, with no suckers, bearing a single, very full, short ear, well covered with husks; kernels white, smooth.

EARLY MINNESOTA.—Very little later than the above, but an old and deservedly popular market sort. Stalks short and not suckering, bearing one or two ears well covered with husks; ears long, eight rowed; kernels very broad, sweet and tender, not shrinking much in drying. By careful selection we have developed a stock of this standard variety which is remarkably uniform, and in which all the good qualities which have made it so popular are intensified.

CROSBY'S EARLY.—A most excellent variety, and remarkably early. Ears of good size, twelve rowed, of medium length; grain very thick and sweet. This is the sort grown in Maine, and it is the use of this variety rather than any peculiarity of soil that has given Maine sweet corn its reputation for quality.

LEET'S EARLY.—The earliest large eared corn. Stalk a little taller than the Minnesota, generally red; ears large, generally ten to twelve rowed; cob white. This is a very desirable corn for those markets where an early, large eared corn is wanted. This variety took the first premium at the great Corn Show in Chicago in 1887, as the best early sweet corn.

PEE AND KAY.—This has proved a very popular variety, particularly in the East. Stalks of medium height, bearing two straight, handsome, ten or twelve rowed ears, which are very large for so early a variety. They mature about with Minnesota and are of good quality, cooking very white and tender.

EARLY SOUTHERN SWEET.—This is a true hybrid corn, being the result of a crossing of the Minnesota on the Cuzco, a Mexican species with very tall stalks and short, thick ear, bearing grains as large as chestnuts. Stalks about the height of Minnesota, very stiff, with broad, stiff foliage, and bearing medium length ten rowed ears covered with thick, coarse husks. Grain large, with a thick skin, but sweet and good. The ears become fit for use about with the Minnesota and remain in condition an unusually long time. This variety is growing in favor in the South where it seems, from reports we have had, to do more than ordinarily well. We hope all our friends there will give this a thorough trial.

PERRY'S HYBRID.—Another eastern and very popular variety. Stalks of medium height, very stout, bearing two large, twelve or fourteen rowed ears, which often have a red or pink cob; grain medium size, cooking very white and tender. Matures a little later than the Minnesota.

EARLY SWEET OR SUGAR.—Ears of good size, eight rowed, tender and sugary; plant productive, hardy and quite early. An excellent table sort.

MOORE'S EARLY CONCORD.—Produces its very large, handsome, fourteen rowed ears very low on the stalk, and comes into use after Perry's Hybrid. The quality is faultless, and it is valuable as an intermediate variety.

BLACK MEXICAN.—Although the ripe grain is black, or bluish-black, the corn, when in condition for the table, cooks remarkably white, and is surpassed by none in tenderness. This, by many, is considered the most desirable for family use of the second early sorts; often does well for second early in the South.

OLD COLONY.—Originated near Plymouth, Mass., nearly fifty years ago; was lost sight of for a while; revived and sold under various names since, as Landreth's Sugar, etc. Stalks about six feet high, usually bearing two large, sixteen

to twenty rowed ears; grain very deep and one of the sweetest and best of the late varieties. It is fit to use a few days earlier than Evergreen; cannot be excelled as a market sort and is one of the best for canners.

EGYPTIAN SWEET.—A variety noted for its productiveness, the stalks having from two to four ears each, the large size of its ears, its sweetness and tenderness; much esteemed in some localities for canning purposes.

HICKOX HYBRID.—A very popular variety in the East. Ears longer than the Evergreen, but not quite so large; grain very white and retains this color when cooked and until quite mature. A very desirable sort for canners who wish a late corn.

STOWELL'S EVERGREEN SWEET.—This variety is intermediate in its season, and if planted at the same time with earlier kinds, will keep the table supplied until October. It is hardy and productive, very tender and sugary, remaining a long time in condition suitable for boiling. Our stock has been carefully grown and selected to avoid the tendency to a shorter grain and deterioration in the Evergreen character of this best of all late sorts. This and Mammoth are standard late varieties in the South.

MAMMOTH SWEET.—This variety produces the largest ears of any sort with which we are acquainted, a single ear sometimes weighing two or three pounds. It is of excellent quality, sweet, tender and delicious, and its only fault is the immense size of the ear.

EARLY ADAMS, OR BURLINGTON.—An excellent early field variety, and often used for table, particularly in the South. Ears about eight inches long, twelve or fourteen rowed; kernels white, rounded, somewhat deeper than broad, and indented at the outer end, which is whiter and less transparent than the inner.

EARLY RED BLAZED.—This Flint variety is not only early, but will endure uninjured a degree of cold and wet that would be fatal to other sorts. Stalks medium height, without suckers, dark green with red or bronze markings. Leaves broad, green at base, but bronze at top, particularly while the plant is young. Ears long, eight rowed, well filled, small at base. Grain flinty and of fine quality, bright yellow at base of ears, but red at the tips.

EARLY GOLDEN DENT, OR PRIDE OF THE NORTH.—A very early Dent variety, ripening with the Flint sorts, and can be grown as far north as any other variety of Dent corn. Stalks small, with broad leaves. Ears short, twelve to sixteen rowed, well filled. Grain long, yellow, making an extra quality of meal.

EARLY GOLDEN LENAWE DENT.—Plant medium sized, stout, with very broad leaves, producing two ears, which are large, cylindrical, sixteen or eighteen rowed, with very deep yellow grain and an exceedingly small cob. It matures very early and surely.

EARLY YELLOW HATHAWAY DENT.—Stalks above medium, stout, with many broad leaves and bearing two ears on long foot stalks so that they hang point downwards, thus protecting the grain from rain. Ears medium sized, with very small cob, especially at the base; sixteen to twenty rowed, grain yellow, dented with small, projecting point, very long, and wedge shaped.

ENSILAGE.—Many people think that any variety of corn will do for ensilage or fodder. This is only partially true; some varieties are much better for this purpose, giving a larger proportion and better quality of fodder. What we offer is especially valuable and will give an immense yield of fodder of the best quality.

RICE POP-CORN, FOR PARCHING.—A very handsome variety. Ears short; kernels long, pointed and resemble rice; color white; very prolific. Probably no variety of popcorn is superior to this for parching.

CRESS.

French, *Cresson*. German, *Kresse*.

CURLED, OR PEPPER GRASS.—This small salad is much used with lettuce, to which its warm, pungent taste makes a most agreeable addition.

CULTURE OF THE CURLED VARIETIES.—The seed should be sown in drills about eighteen inches apart, on very rich ground, and the plants well cultivated. Keep off insects by dusting with Pyrethrum Powder. It may be planted very early, but repeated sowings are necessary to secure a succession.

WATER.—This is quite distinct from the last, and only thrives when its roots and stems are submerged in water. It is one of the most delicious of small salads and should be planted wherever a suitable place can be found.

CULTURE.—The seed should be sown and lightly covered, in gravelly, mucky lands along the borders of small rapid streams, and the plants will need no subsequent culture, as under favorable conditions they increase very rapidly by self-sown seed and extension of the roots.

CUCUMBER.

French, *Concombre*. German, *Gurken*.

This is one of those vegetables which can be grown to perfection by anyone who can control a few square yards of soil which is fully exposed to the sun, and the fruit is so much better when gathered fresh from the vines than it is when obtained in the market, that every family should be supplied from its own yard.

CULTURE.—The plants are tender, and planting should be delayed until settled warm weather, or ample facilities should be provided for protecting them from frosts and during cold storms. Form low, flat hills six feet apart each way, of rich soil, by mixing in a quantity of thoroughly decomposed manure, stirring the soil to a depth of sixteen inches or more; or open shallow trenches six to eight feet apart, and mix with the bottom earth a quantity of similar manure and replace the surface soil. Scatter on each hill fifteen or twenty seeds, or one every inch along the rows, and cover one inch deep, pressing the soil firmly over them.

As soon as the plants are up they will be liable to attack by the striped cucumber beetle. These may be kept off by frequent dusting with air-slaked lime, soot, or sifted ashes diluted with fine road earth; care should be taken not to use too much, for if too strong any of the above materials will kill the vines. We have found the following mixture quite effectual: Take unslaked lime, add enough water to slake; when it begins to steam sprinkle over it flowers of sulphur at the rate of one-half lb. per bushel of lime; cover and watch that the sulphur does not take fire—if it should, add a little water; when the lime is thoroughly slaked mix well and apply by dusting on the leaves rather sparingly. This mixture should be used while fresh. When the plants are well established, thin to three plants to each hill. In gathering, pick all the fruit before it begins to ripen, as the vines will cease setting fruit as soon as any seed commences to mature. In field culture, plow furrows four feet apart across the field, and similar ones, but omitting every fourth furrow, at right angles to the first; this will form paths for the distribution of manure and the gathering of the fruit. At each intersection drop a shovelful or more of well rotted manure, which should be well mixed with the soil, so as to form a low, flat hill. In gathering for pickles cut the stem, instead of pulling the fruit off, and be careful not to mar the fruit in any way, for if the skin is broken the pickles will not keep.

EARLY RUSSIAN.—Earliest and hardiest. Vines vigorous and productive. Fruit three to four inches long, small, oval, pointed at each end, covered with fine small spines.

EARLY CLUSTER.—Vines vigorous, producing the bulk of the crop near the root and in clusters. Fruit short, holding full size to each end, dark green, but paler at blossom end. Good for table use, but not adapted to pickling.

EARLY SHORT GREEN, OR EARLY FRAME.

EARLY SHORT GREEN, OR EARLY FRAME.—Plants very vigorous and productive. Fruit straight, handsome, smaller at each end, bright green, lighter at the blossom end, with crisp, tender flesh, and when young makes excellent pickles.

There are a number of different strains of pickling cucumbers, each of which has distinct merit and is popular in some section. We offer carefully grown stocks of the following:

CHICAGO PICKLING.

CHICAGO, OR WESTERFIELD PICKLING.—Very popular with Chicago market gardeners, and extensively grown in that vicinity. Fruit medium length, pointed at each end, with very large and prominent spines; color deep green.

JERSEY PICKLING.—Very popular in New Jersey. Intermediate between the Long and Short green, forming a long, slender, cylindrical pickle, which is very crisp and tender.

D. M. FERRY & CO'S PERFECTION PICKLING.—This variety is not only the best for pickles, but is one of the best for the table. Vines vigorous, producing their fruit early and very abundantly; fruit distinctly three-sided, tapering towards each end, of dark green color, which they retain as pickles; flesh very crisp and tender.

D. M. FERRY & CO'S PERFECTION PICKLING.

BOSTON PICKLING, OR GREEN PROLIFIC.—A distinct variety very popular for pickles. Fruit short, nearly cylindrical, but pointed at each end, bright green and a great producer.

PARISIAN PROLIFIC PICKLING.—This is a new French sort. The fruit is very long, slender, cylindrical, densely covered with fine prickles, and deep, rich green in color. The flesh is very crisp and tender, making it one of the best for slicing as well as for pickles. The vine produces its fruit in clusters, and is enormously productive. This should receive universal trial.

PARISIAN PROLIFIC PICKLING.

NICHOL'S MEDIUM GREEN.—A good variety, the result of careful selection. Fruit of medium length, nearly cylindrical, very uniform in shape, and of good color when young, but becomes yellow and bitter at an earlier stage than most, and is not at all suited for forcing or early planting.

EARLY WHITE SPINE.—One of the best sorts for table use. Vines vigorous, fruiting early and abundantly; fruit uniformly straight and handsome, light green with a few white spines; flesh tender and of excellent flavor. In this country, this variety is used more, perhaps, than any other for forcing under glass.

ARLINGTON.—A selection from the White Spine, being more pointed at each end. The young fruits are unusually crisp and tender, and are of a very dark green color, so that the variety is considered by many to be the best for small pickles.

BISMARCK.—A cross between the Long Green and White Spine, having the dark, slender pickle of the former and the

BISMARCK.

color of the latter when full size. Fruit long, cylindrical, very constant in form and color; flesh crisp and tender and excellent either for pickles or slicing. Those who want a cucumber longer than White Spine, but with its other characters, will find in this variety all they desire.

IMPROVED LONG GREEN.

IMPROVED LONG GREEN.—Produced by selection from the Long Green. Vines vigorous and productive, forming fruit fit for the table nearly as early as the shorter sorts; fruit about twelve inches long, firm and crisp, with very few seeds. The young fruit makes one of the best of pickles, and when ripe is the best of any for sweet pickles.

GHERKIN.

GHERKIN, FOR PICKLING.—A very small, oval, prickly variety, quite distinct from all others. It is grown exclusively for pickling; is the smallest of all the varieties and should always be picked when young and tender. The seed is slow to germinate, requiring usually from two to three weeks.

EGG PLANT.

French, *Aubergine*. German, *Eierpflanze*.

The Egg Plant, when well grown and properly cooked, is a delicious vegetable, and it should find a place in every garden. **CULTURE.**—The seed germinates slowly, and should be

EARLY LONG PURPLE.

started in strong heat, for in this, as in all sub-tropical plants, it is of importance to secure a rapid and continuous growth from the first, the plants never recovering from a check received when young. When the plants have formed two rough leaves, transplant to three or four inches apart. Keep the bed closed and very warm, shading from the direct rays of the sun, and giving abundance of water until the ground is warm and all danger, not only from frost, but from cold nights, is past; then harden off the plants by gradual exposure to the sun and air, and decrease the supply of water, then carefully transplant into very warm, rich soil, setting the plants two and a-half feet apart. If needed, shade the young plants and protect them from the potato bug, which is very fond of them, and if not prevented will often destroy them. Some seasons Egg Plants will fail to set fruit, or will not begin bearing until too late to mature, no matter how faithfully they may have been cared for. This is especially liable to happen if the summer is cool and rather moist. We know of no remedy for this. Pinching off the ends of the branches after the plants begin to bloom, and not letting more than two or three fruits set will often effect something, and is a good practice any year.

EARLY LONG PURPLE.—This is one of the earliest and most productive varieties; fruit long, dark, rich purple, and of fine quality.

BLACK PEKIN.—Nearly as early as the last, and nearly as large as the later sorts. Very prolific and desirable for market gardeners' use. Fruit nearly round; skin smooth, black and glossy; flesh white, fine grained and delicate.

LARGE NEW YORK PURPLE.—Large, round or oval, of excellent quality; later than the preceding and highly esteemed in the New York market.

D. M. FERRY & CO'S IMPROVED LARGE PURPLE.

D. M. FERRY & CO'S IMPROVED LARGE PURPLE.—This variety has almost superseded all others both for market and private use, owing to the large size and high quality of its fruits and its extreme productiveness. Plants large spreading; foliage light green; fruit very large, oval or short pear shaped; color dark purple with an occasional splash of green around the stem. Plants ripen usually two to six large fruits.

ENDIVE.

French, *Chicoree*. German, *Endivien*.

Endive in its natural state is very bitter, but when properly blanched its leaves make a fine salad, and maturing as it does after lettuce is past, it is very useful.

CULTURE.—Endive may be grown at any season of the year, but is more generally used late in the fall. Sow the seed during June or July, in drills fourteen inches apart, and when well established thin the plants to one foot apart. When nearly full grown, tie the outer leaves together over the centre in order to blanch the heart of the plant, or better still, place a square box over each plant and let remain about a week, when it will be thoroughly blanched. By covering every few days a succession may be kept up.

GREEN CURLED.—Is the hardiest variety, with beautifully curled, dark green leaves, which blanch white, and are very crisp and tender.

GREEN CURLED.

EVER WHITE CURLED.—By far the most beautiful variety. Plant moderately dense with divided leaves, which are coarser and less tender than those of the Green Curled; but the midrib is yellow and the leaves frequently almost white, so that the plant is very attractive and always brings the highest price on the market.

BROAD LEAVED BATAVIAN.

BROAD LEAVED BATAVIAN.—Has broad, thick, plain or slightly wrinkled leaves, forming a large head which is preferred for stews and soups; but if the outer leaves are gathered and tied at the top, the whole plant will blanch nicely and make an excellent salad for the table.

GARLIC.

French, *Ail*. German, *Knoblauch*.

A bulbous rooted plant, with a strong, penetrating odor, but much esteemed by some for flavoring soups, stews, etc. We frequently receive orders for *garlic seed*, but we can supply bulbs only.

GARLIC.

CULTURE.—Prepare the ground the same as for onions, and plant the bulbs in drills eight inches apart, and four inches apart in the rows and cover two inches deep. When the leaves turn yellow, take up the bulbs and dry in the shade, and lay them up in a dry loft, as you would onions.

GOURD.

CULTURE.—The Gourd is a tender annual, and should not be planted until all danger of frost is over, and not less than

six feet apart each way, in good, rich loam. Three plants in a hill will be sufficient to leave at the last hoeing.

SUGAR TROUGH.—This variety grows to a very large size and is valuable, when dry, for a variety of household purposes, such as baskets, buckets, cans, etc.

JAPANESE NEST EGG.—The fruit of this plant resembles an egg in size and appearance. They are pure white, do not crack, are not injured by heat or cold, and so make the very best nest eggs.

For Ornamental Varieties, see Flower Seeds.

HORSE RADISH.

Horse Radish produces no seed but is grown from pieces of the roots.

CULTURE.—Mark off rows two and one-half feet apart in rich, moist, well prepared ground and set the pieces of roots eighteen inches apart in the rows, two to three inches below the surface, the small end down. Cultivate thoroughly until the tops cover the ground, when their shade will keep down the weeds.

KALE.

French, *Chou Verts*. German, *Blaetter Kohl*.

Borecole, Kale, or German Greens, are general terms applied to those classes of cabbage which do not form heads, but are used in their open growth. Some of the varieties are the most tender and delicate of any of the cabbage tribe. They are hardy and are improved rather than injured by the frost.

CULTURE.—As far north as New York they may be sown in September and treated like spinach, although in the South they will live and grow throughout the winter without protection, or they may be planted and treated like winter cabbage, and will continue growing till very late. If cut when frozen, thaw out in cold water before boiling. The young shoots which start up in the spring from the old stumps are very tender and make excellent greens.

TALL GREEN CURLED SCOTCH.—This is very hardy, and improved by a moderate frost. About two feet high, with an abundance of dark green, curled and wrinkled leaves. It stands the winters in the Middle States without any protection.

TALL GREEN CURLED SCOTCH.

HALF DWARF MOSS CURLED.—An intermediate form which seems to possess all the merits of both the tall and dwarf sorts. It forms a medium sized head of nicely curled leaves, which are kept well off the ground, but at the same time so compact as not to suffer from frost.

GERMAN DWARF PURPLE.—A dwarf, compact plant composed of a mass of large, finely frilled leaves of a deep purple color. Tender and of excellent quality; so handsome that it is frequently grown for ornament.

EXTRA CURLED GERMAN DWARF GREEN.—Plant dwarf, compact. Leaves numerous, long, of deep bright green color, and a mass of frilling, so that often they are as thick as wide, and are of the best quality.

EXTRA CURLED GERMAN DWARF GREEN.

GERMAN DWARF GREEN.—A variety having large, moderately frilled leaves covered with a dense bloom. It is popular in the South, where it grows all winter without protection and is also planted largely in the vicinity of New York, where it is known as "Sprouts," or Siberian Kale.

KOHL RABI.

French, *Chou-rave*. German, *Kohl-Rabi*.

The Kohl Rabi is a vegetable intermediate between the cabbage and turnip, and combines the flavor of both. The edible part is a turnip shaped bulb formed by the swelling of the stem. When used for the table this should be cut when quite small, as it is then very tender and delicate, but if allowed to reach its full size it becomes tough and stringy.

LARGE GREEN.

CULTURE.—Sow in light, rich soil, as early as possible, in drills sixteen inches apart, and when well established, thin to six inches apart in the row.

One or two plantings at intervals of ten days will give a succession until hot weather, when they fail to grow well; but plantings may be made the latter part of July for fall use.

EARLY WHITE VIENNA.—Very early, small, handsome, white bulb. Best early variety for table.

EARLY PURPLE VIENNA.—Nearly identical with the last except in color, which is a bright purple, with the leaf stems tinged with purple.

LARGE GREEN.—Hardy, quite late, and used for feeding stock. Bulbs large, weighing eight to ten pounds, whitish-green in color; leaves large and numerous.

LEEK.

LEEK.

French, *Poireau*. German, *Lauch*.

Belongs to the onion family and by some preferred to the onion. Sow the seed and care for the young plants same as for onions. When the young plants are about the size of a goose quill, transplant to a prepared bed in rows one foot apart and four or five inches in the row. Set the roots deep and draw the earth to them when cultivating, so that they may be well blanched by the time they are fit for use.

LONDON FLAG.—Is the variety more cultivated in this country than any other. It is hardy and of good quality.

LETTUCE.

French, *Laitue*. German, *Lattich-Salat*.

There is no vegetable which is more universally used than this, and yet few people know how inviting and appetizing it is when brought to the table fresh and unwithed, a condition in which it is rarely, if ever, found in our markets, and which can only be secured by growing the plants in one's own garden. So we earnestly urge all of our readers who can possibly do so, to grow their own lettuce.

CULTURE.—Lettuce should grow rapidly and to attain this kind of growth it should be sown in a rich, thoroughly pre-

pared soil. For early crop sow under glass in February or March and thin out as necessary to prevent crowding. Keep at a moderate heat and give all the air and light possible. If it is desirable, transplant to open ground as soon as the ground is fit to work. Sow out doors as early in spring as the ground can be worked, in drills eighteen inches apart and thin the young plants to four inches apart in the row. As the plants begin to crowd, thin out and use as required. In this way a much longer succession of cuttings may be had from the same ground. Sow at intervals of from two to three weeks throughout the summer for a continuous crop. In this, as every other garden crop, thorough cultivation is essential.

We take especial pains to test thoroughly all the various candidates for favor offered by seedsmen and growers from year to year, and can assure our patrons that the varieties of lettuce we catalogue include the best of every valuable type.

GRAND RAPIDS.

GRAND RAPIDS (SEED BLACK).—As a distinctively forcing lettuce this variety undoubtedly stands at the head of the list. Leaves medium size, of light, yellowish-green color, much crimped and frilled, thin, but of very upright growth; forms a fair sized but loose head; crisp, tender and of good quality. Owing to its upright habit it may be planted very closely. It is of extremely rapid growth; very little liable to rot; will stand, without spoiling, a week to ten days after it is fit to cut, and retains its freshness a long time after cutting. It will stand shipping a longer distance than any other variety of this class and still be in good, marketable condition.

TILTON'S WHITE STAR (SEED WHITE).—A new and distinct sort of great merit. Of the Black Seeded Simpson type, but grows larger and more rapidly; has a broader, thicker, darker colored, less frilled at the edge leaf; forms a larger, more distinct and solid central cluster of leaves, making almost a head; blanches perfectly and is of excellent quality. The plants remain long in condition for use before running to seed, and owing to the thick leaf keep long after cutting without wilting. Repeated trials both for forcing and early planting out doors convince us that this is a decided improvement over other varieties of this class for either purpose. Give it a trial.

BLACK SEEDED SIMPSON.—For those who like a large, thin, exceedingly tender leaf, and for those markets which demand a large, loose head, this is one of the best varieties either for forcing or early sowing out of doors. Plant large, forming a large, loose head; very light yellowish green in color, so that a little wilting is not noticed. Leaves very large, thin, slightly ruffled and blistered, the inner ones nicely blanched, and even the large outside leaves are tender and of good quality. By far the most popular variety in Detroit markets, and one of the best for general garden use, as it is very attractive, of excellent quality, and continues a long time in condition for use.

SIMPSON'S EARLY CURLED (SEED WHITE).—Similar to the last, but the plant is a little smaller and decidedly darker in color and the leaves are more frilled and blistered. Popular in New York markets.

EARLY TENNIS BALL (SEED BLACK).—A first class head lettuce, and one of the best for forcing under glass or early planting out doors. Plants medium size, having thick dark green leaves, and when well grown forming very compact solid heads, which blanch easily and are very crisp and tender. Should not be planted in the hot weather of summer, as it then runs up to seed very quickly.

HUBBARD'S MARKET (SEED WHITE).—After the style of Tennis Ball, but grows larger and is later to mature, and the head is a little more open. Popular in some eastern markets.

EARLY CURLED SILESIA (SEED WHITE).—An early erect growing, loose heading variety, which may be used very young. Color light green; leaves much frilled and savoyed.

FERRY'S EARLY PRIZE HEAD (SEED WHITE).—Careful comparison for several years with scores of varieties of American and foreign lettuces convinces us that this is by far the best variety for those who like a thin, tender, sweet lettuce; but it is so tender that it is very difficult to market it in good condition, and so has no place in market gardens unless it can be delivered directly to the consumer. Plant large, deep green, so washed with red as often to appear more red than green; forming a head of a dense mass of leaves rather than one like a cabbage, and very slow to run to seed; leaves large, nearly round, frilled at the edge and densely blistered. They are exceedingly crisp, tender and good flavored, and do not become bitter nearly as early as those of other varieties.

FERRY'S EARLY PRIZE HEAD.

HANSON (SEED WHITE).—This is the best heading lettuce grown, and furnishes the best blanched leaves, fully equaling those of the Cos varieties. Unfortunately a great deal of spurious and inferior stock has been sold, thus diminishing its popularity, but when pure it cannot fail to give satisfaction, and we think we have perfectly pure and true stock. Plant large, forming a large, flat head, resembling that of a cabbage, and so slow to run to seed that it often fails to form any seed stalk. Outer leaves bright green, with prominent, light colored veins, inner leaves white and usually curved and twisted at the base, very tender and sweet.

PHILADELPHIA BUTTER, OR EARLY WHITE HEAD (SEED WHITE).—Many prefer a thick leaved, smooth lettuce, and to meet this demand we present this sort. Plant dark green, with many nearly round, thick leaves formed into a very solid, round head, which stands a long time without running to seed. Leaves very thick, folded or puckered at the base, the inner ones blanched to a rich yellow color, and exceedingly rich and nutty in flavor.

PHILADELPHIA BUTTER, OR EARLY WHITE HEAD.

FRANKFORT HEAD (SEED BLACK).—The best light colored, smooth, thick leaved head lettuce. Plant light, bright green, with many broad, smooth leaves, nearly all of which are gathered into a dense, round head, which is slow to run to seed. Leaves very thick, the inner ones blanched to a light yellow, tender and of a rich flavor.

BUTTERCUP (SEED WHITE).—Plant medium sized, with numerous round, smooth leaves, which are of a beautiful yellow color, and very sweet and tender. The plants are vigorous, but do not run to seed until very late, remaining in condition for use about as long as any variety we have tested.

DEACON (SEED WHITE).—While this does not make as large a head as some others, the heads formed are very solid and of excellent flavor, and remain in condition for use as long as any variety in cultivation. Plant medium size, with very few outer leaves; leaves light green, very thick. This is certainly one of the best varieties for summer use.

DEACON.

LARGE DRUMHEAD, OR VICTORIA CABBAGE (SEED WHITE).—The largest of the heading lettuces. Plant very large, forming an immense, loose head, bright green without and light green or white within. Leaves very large, strongly veined, coarse, but the inner ones are very crisp and tender.

BROWN DUTCH (SEED BROWN).—An old sort, noted for its hardness. Leaves large, thick, green tinged with brown. It always forms a large, solid head, which is somewhat coarse looking, but the inner leaves are beautifully blanched, exceedingly sweet, tender and well flavored. Desirable because of its hardness and fine quality.

EARLY BOSTON CURLED (SEED BLACK).—One of the most beautiful varieties in cultivation. Plant medium in size, deep, rich green in color, with many broad leaves which are so deeply frilled that the plant looks like a bunch of moss. When young the leaves are of good quality, but they soon become bitter and the plant quickly runs to seed.

The Cos lettuces are distinct from the preceding sorts, in having long, narrow, spoon shaped leaves, which usually fold into loose sugar loaf shaped heads, which blanch better by having the outer leaves drawn about them and tied. They are justly celebrated throughout Europe on account of their exceeding crispness, tenderness and delicate flavor, and are becoming more and more popular in this country as they become better known.

COS, EARLY WHITE SELF-FOLDING (SEED WHITE).—A new and distinct Cos lettuce which does not need tying up. The leaves are yellowish-white in color, long, narrow, upright, folding into a solid head like that of an Early York cabbage. This is a truly self-blanching lettuce; is very crisp and tender, and of superior flavor. Sold also as Trianon.

MARTYNIA.

A strong growing, hardy, annual plant, with curious shaped seed pods, which, when young and tender, are highly prized for pickling. The pods are produced in great abundance, and should be gathered when about half grown; after the hardening of the flesh they are worthless.

CULTURE.—Sow seed after settled warm weather in rows three feet apart and thin the plants to two feet in the row.

PROBOSCIDEA.—The common variety. Sow in rich, warm soil after corn is well up, in drills three feet apart, and thin the plants out to two feet in the row.

MELON, MUSK.

French, *Melon*. German, *Zucker-Melone*.

The Musk Melon is too universally popular to need any special description.

CULTURE.—Cultivate as recommended for cucumbers, except that the hills should be six feet apart. *Rich earth* for the young plants is far better than manure, but if the latter must be used, see that it is well rotted. If the plants grow very rank, more and finer fruit will be secured by pinching off the ends of the shoots when about three feet long.

JENNY LIND.—An extra early green fleshed melon, and one of the sweetest in cultivation. Fruits globular or flat globe shaped, ribbed and covered with a shallow netting; medium size to small. One of the best melons for hotel and restaurant use on account of its convenient size.

SKILLMAN'S FINE NETTED.—A very early melon of small size, varying in shape from almost oval to a flattened globe. Skin green until the fruit is over ripe, when it becomes yellow, covered with fine netting. Flesh light green, very thick, sweet and of moderately high flavor.

SMALL GREEN NUTMEG.—Fruit of medium size, slightly ribbed, globular. Skin dark green, becoming yellow when over ripe, and nearly covered with broad, shallow netting. Flesh green, very thick, a little coarse, but of fine flavor.

SKILLMAN'S FINE NETTED.

SMALL GREEN NUTMEG.

BALTIMORE, OR ACME.—Fruit medium size, oval, slightly pointed at stem end, slightly ribbed, covered when ripe with coarse netting. Flesh thick, green, very fine flavored and sweet. We think this one of the most uniformly good melons we have on our list.

EARLY WHITE JAPAN.—An old variety, but of very fine quality. Fruit oval, white, with green flesh. One of the best for the home garden. Very early.

IMPROVED GREEN FLESHED CANTALOUPE.—Fruit medium size to large, oval, moderately ribbed, skin very dark green, partially covered with coarse netting. Flesh very thick, sweet, and of fine quality.

IMPROVED LARGE GREEN NUTMEG.

IMPROVED LARGE GREEN NUTMEG.—We think we have by careful selection and growing, secured in this variety of the largest size, but having all the good qualities of the old Green Nutmeg. Vines vigorous, hardy, productive; fruit very large, round, slightly flattened at both ends, ribbed, covered with coarse netting; flesh very thick, green, and of the highest flavor.

HACKENSACK, OR TURK'S CAP.—Fruit very large, flattened globe shape, ribs large and of irregular width, densely covered with coarse netting; flesh green, thick, coarse, but of the finest flavor.

HACKENSACK, OR TURK'S CAP.

MONTREAL.—Our stock of this variety, unlike most that is offered, is of distinct and uniform type. Fruit of the largest size, often measuring twelve to fourteen inches in diameter; spherical, or slightly oval in shape, with regular, shallow ribs, and sparsely covered with netting; flesh firm, light green, sweet and of excellent flavor.

PINE APPLE.—Vines very productive and hardy. Fruit oval, medium sized, slight ribs and dark green at first, but becoming covered with shallow gray netting. Flesh green, very thick, soft, delicate and exceedingly sweet and high flavored. One of the best of all the green fleshed melons for home use.

BAY VIEW.

BAY VIEW.—Fruit long and of the largest size, often weighing fifteen to seventeen pounds under high culture, deeply ribbed and covered with coarse netting; flesh green, thick and of fine flavor. A favorite in some markets.

CASABA, OR GREEN PERSIAN.—One of the largest and best musk melons in cultivation. Fruit long, oval, a little pointed at each end; flesh green, very sweet.

RED OR YELLOW FLESHED SORTS.

EMERALD GEM.—The standard of excellence among

EMERALD GEM.

the salmon fleshed varieties. Fruit medium size to small, globular, or slightly flattened at the ends, ribbed and only slightly netted. Skin deep green while young, becoming tinged with yellow as the fruit matures; flesh deep salmon-yellow, very thick, ripens close to the rind and is unsurpassed in flavor. This variety has steadily grown in popular favor and is to-day, in many large markets, leading all other varieties.

SURPRISE.—Vines hardy and productive; fruit oval, not deeply ribbed, covered with slight patches of netting; skin yellowish-white; flesh deep salmon color. Quality the very best.

JAPAN CORAL FLESH.—A medium sized globular melon, regularly ribbed and densely netted; flesh salmon

JAPAN CORAL FLESH.

pink, very deep, fine grained and of excellent flavor. A desirable melon for home or market garden use.

OSAGE, OR IMPROVED MILLER'S CREAM.—This melon has made its way into public favor from the market rather than the garden and seems to be just what the people want. It is medium sized, oval slightly, ribbed, covered more or less with shallow netting, dark green in color. The flesh is deep salmon, and is good to within a fourth of an inch of the rind. Very sweet and good flavored. A favorite variety in some markets.

LONG YELLOW. OSAGE, OR IMP'D MILLER'S CREAM. —A large variety; long, oval, deeply ribbed; flesh thick, light salmon colored, and of a peculiar musky flavor. This variety is used in its green state for mangoes.

MELON, WATER.

French, *Melon d'eau*. German, *Wasser-Melone*.

CULTURE.—The essential thing is to get a good, strong vine early in the season, which may be secured by forming a large, well drained hill of rich earth, avoiding using the manure in such a way as to cause the plant to dry out under the hot sun. On this hill plant the seed as soon as the ground is warm and dry, and carefully protect the young plants from insects, and hasten their growth by the use of liquid manure.

PHINNEY'S EARLY.—A valuable variety for use in the North; hardy and a sure cropper. Vine vigorous and productive, fruiting quite early; fruit oblong, smooth, marbled with two shades of green; rind thin; flesh pink, very sweet, tender and free from stringiness.

PHINNEY'S EARLY.

D. M. FERRY & CO'S PEERLESS.—The best melon for private gardens and for market gardeners who deliver direct to consumers, and is grown extensively in some sections for shipping in car-load lots, distances of two and three hundred miles. Vine moderately vigorous, hardy, productive; fruit medium sized, oval, finely mottled; rind thin; flesh bright scarlet, solid to the centre, crisp, tender and of the highest flavor. Our stock of this variety is most carefully selected.

DARK ICING.—Fruit large, nearly round, dark green, very indistinctly mottled with lighter shade. Flesh very rich, bright red. The juice, which is very abundant, is of rich, deep color and flows so freely as to be available as a drink. All of our stocks of Icing melon are pure and perfectly distinct, showing very uniformly the characteristics of each sort as described.

DARK ICING.

ROUND LIGHT ICING.—Fruit medium sized, round, very light green or white, mottled with slightly darker green. Flesh bright, light red, very sweet and tender. By many this is considered the best of all melons.

LONG LIGHT ICING.—A variety established by selection until it is uniformly long, oval in shape and nearly twice as heavy as the Round Icing. In other respects it is much like that sort and fully equal to it in quality. Repeated trials

have failed to show Jordan's Gray Monarch to be different from this.

LONG LIGHT ICING.

BOSS.—Vines small, but vigorous, with small, finely divided leaves. Fruit above medium size, long, with rounded ends, very dark green skin, and exceedingly bright red flesh, which extends to within one-half inch of the surface, and is very sweet. Seed small, dark brown. It is an excellent sort for home use, but the rind is too thin for a good shipper.

BLACK SPANISH.

BLACK SPANISH.—Vine small, so that they may be planted closer than most sorts. Round, very dark green, with scarlet flesh and black seeds. It is not so large as some of the other sorts, but very sweet and of fine flavor.

GYPSY, OR GEORGIA RATTLESNAKE.

GYPSY, OR GEORGIA RATTLESNAKE.—One of the largest varieties, and stands shipment long distances. Fruit cylindrical, square at the ends, smooth, distinctly striped and mottled light and dark green. Flesh bright scarlet and very sweet.

CUBAN QUEEN.—Fruit medium sized to large, globular or oval; skin striped light and dark green in sharp contrast; rind medium thick; but stands shipment well. Flesh bright red, solid, very crisp and sugary.

DIXIE.—This new and desirable variety, of Southern origin, is a cross between the Kolb's Gem and Mountain Sweet, having the tough rind and long keeping qualities of the former combined with the great productiveness, high flavor and freedom from stringiness of the latter, and is destined to become, we think, a leading market sort. Vines vigorous, large growing and hardy; fruits medium size to very large, about one-third longer than thick. Color of skin dark green striped with a lighter shade, making it very attractive; rind thin but tough; flesh bright scarlet, ripens closely to the rind, is of the best quality and free from all the toughness and stringiness which is so objectionable a feature of many shipping melons. We hope all our customers will give this very desirable sort a trial, as we feel sure they will be greatly pleased with it.

KOLB'S GEM.—The most profitable variety to grow for shipping long distances, and is probably used more than all

others for this purpose. Vines of medium size, but remarkably vigorous and healthy. Leaves of medium size, deeply cut with a peculiar, frilled edge. Fruit of the largest size, round or slightly oval, marked with irregular mottled stripes of dark and light green. Outer rind or shell exceedingly hard

Kolb's Gem.

and firm, resembling that of a winter squash. Flesh bright red, extending to within half an inch of the rind; always solid, very firm, a little coarse, but sweet and tender. An excellent keeper. Seeds dark gray.

MAMMOTH IRON CLAD.—Similar in marking and in general character to the Kolb's Gem, possessing the same good qualities of the fruit, and quite as coarse grained, but differing in shape, this being long and cylindrical, like the Rattlesnake. The vines are also very large and coarse, and are late in coming into bearing, so that it does not succeed in heavy soils.

MOUNTAIN SWEET.—A large, oval variety; rind green; flesh scarlet and quite solid to the center, very sweet and delicious. This is an old standard sort and one of the best for the home garden.

MOUNTAIN SPROUT.—A large, long, striped variety, with bright, scarlet flesh and drab colored seeds; it differs from the Mountain Sweet in color and shape, is rather late, and will keep longer in the fall.

ORANGE.—An oval melon, skin green; flesh scarlet, of good quality, and is peculiar in that the flesh may be easily separated from the rind like an orange.

ICE CREAM.—Medium sized, with scarlet flesh, and very sweet; a good variety for main crop.

CITRON.—Employed in making preserves. Grows uniformly round and smooth, striped and marbled with light green. Flesh white and solid; seeds red.

MUSHROOM.

Agaricus Campestris.

The Mushroom is an edible fungus, of a white color, changing to a brown when old. The gills are loose, of a pinkish-red, changing to liver color. It produces no seed, but instead, a white, fibrous substance in broken threads, called spawn, which is preserved in horse manure, being pressed in the form of bricks. Thus prepared it will retain its vitality for years.

MUSHROOM BED.

CULTURE.—Mushrooms can be grown in the cellar, in sheds, or in hot beds in open air, on shelves, or out-of-the-way places. Fermenting horse manure at a temperature of about 70 degrees, mixed with an equal weight of fresh sod loam, is made into beds the size required, eight inches deep. See to it that the bed is packed very solidly and evenly. In this bed plant the broken pieces of spawn six inches apart, covering the whole with two inches of light soil, and protect from cold and rain. One brick will plant eight to ten square feet of bed. The mushrooms will appear in about six weeks. Water sparingly and with lukewarm water.

MUSTARD.

French, *Moutard.* German, *Senf.*

Mustard is not only used as a condiment, but the green leaves are used as a salad, or cut and boiled like spinach.

CULTURE.—Should be the same as that of Cress.

GOLDEN.—A very superior sort, having broad leaves of a rich, lemon color, which they retain after cooking. In flavor it is superior to the old sorts and is also fully equal to them in hardness.

SOUTHERN GIANT CURLED.—This mustard is very highly esteemed in the South, where the seed is sown in the fall, and the plants used very early in the spring as a salad. The seed is brown and produces plants which grow about two feet high and form enormous bunches.

WHITE ENGLISH.—The leaves are light green, mild and tender when young; seed light yellow.

NASTURTIUM.

French, *Capucine.* German, *Kapuziner Kress.*

CULTURE.—Sow after the ground is warm, in drills one inch deep, by the side of a fence, trellis work, or some other support, to climb upon. They will thrive in good ground in almost any situation, but are more productive in a light soil.

TALL MIXED.—Cultivated both for use and ornament. Its beautiful, orange colored flowers serve as a garnish for dishes, and the young leaves are excellent for salads. The flower buds, scarcely formed, and the green seed pods preserved in vinegar, make a pickle greatly esteemed by many.

For other varieties see Flower Seeds.

OKRA.

French, *Gombo.* German, *Ocher.*

This is an annual from the West Indies, cultivated for its green seed pods, which are used in soups or stewed and served like asparagus. It is highly esteemed in the South for making gumbo soup. The pods when young and tender should be sliced in sections, strung on a thread and hung up in the shade to cure like dried apples; in this condition they can be used for soup at any time.

CULTURE.—Sow the seed thinly in dry, warm soil, in shallow drills two feet apart. After the plants are up, thin them out to nine inches apart; hoe frequently and draw a little earth to the stems as they continue to grow. Gather the pods when quite green, and about an inch and a half long.

WHITE VELVET.—This variety is a great improvement on the old White or the Green. The plant is of medium height, bearing a large crop of white, smooth, tender pods, which retain their tenderness until nearly full sized.

DWARF WHITE.—The longest podded variety. Two feet high, very productive; mature pods a foot long, very thick and fleshy.

OKRA, WHITE VELVET.

ONION.

French, *Ognon.* German, *Zwiebeln.*

The onion not only contains considerable nutriment and has valuable medicinal properties, but is most useful in counteracting the bad effects of sedentary life. The disagreeable odor it imparts to the breath may be avoided in a great measure by thorough cooking, or by eating a few leaves of parsley.

HOW TO RAISE ONIONS.

This is a question we are asked many times every year, and which we will try to answer from our experience in raising many thousands of bushels.

Soil.—A good crop of onions can be raised on any soil which will produce a full crop of corn, unless it be a stiff clay, very light sand or gravel, or certain varieties of muck or swamp lands. We prefer a rich, sandy loam, with a light mixture of clay. This is much better if it has been cultivated with hoed crops, kept clean of weeds and well manured for two years previous, because if a sufficient quantity of manure to raise an ordinary soil to a proper degree of fertility is applied at once, it is likely to make the onions soft. Large and fine crops of onions are often raised on black muck lands, but they must be "sweet" and well drained. Ordinary swamp land will not do and even on the best of muck the first crop is apt to be soft and "necky."

Manure.—There is no crop where a liberal use of manure is more essential than in this. Even on the deep, black muck onion lands of the Western Reserve, manure is essential to a good crop, and not only is the quantity but the quality of the manure used of the greatest importance. If it is too rank it is quite sure to make soft onions, with many scallions. It should be well fermented and shoveled over at least twice during the previous summer to kill weed seeds. Of the commercial manures, we prefer fine ground bone to any other, but large crops are raised by the use of superphosphates. If these manures are used, one-half should be applied when the crop is sown, and the rest just before they begin to form bulbs.

Preparation.—In time to complete the work before the ground freezes up, remove all refuse or previous crops, and spread the composted manure *evenly*, at the rate of about fifty cart loads to the acre. This should first be cultivated in, and then the ground ploughed a moderate depth, taking a narrow furrow, in order more thoroughly to mix the manure with the soil. Carefully avoid tramping on the ground during the winter, and as *early in the spring* as it can be worked, cultivate or thoroughly drag it with a heavy harrow, and then in the opposite direction with a light one, after which the entire surface should be raked with steel hand rakes. It is impossible to cultivate the crop economically unless the rows are perfectly straight; to secure this, stretch a line along one side, fourteen feet from the edge, and make a distinct mark along it; then having made a wooden marker something like a giant rake with five teeth about a foot long and standing fourteen inches apart, make four more marks by *carefully* drawing it with the outside tooth in, and the *head at right angles* to the perfectly straight mark made by the line. Continue to work around this line until on the third passage of the marker you reach the side of the field where you began; measure fifteen feet two inches from the last row, stretch the line again, and mark around in the same way. This is much better than to stretch a line along one side, as it is impossible to prevent the rows gradually becoming crooked, and by this plan we straighten them after every third passage of the marker.

Sowing the Seed.—This should be done as soon as the ground can be got ready, and can best be done by a hand seed drill. This should be carefully adjusted (testing it by running it over a barn floor), to sow the desired quantity of seed and about one-half inch deep. The quantity needed will vary with the soil, the seed used, and the kind of onions desired. Thin seeding gives much larger onions than thick. Four or five pounds is the usual quantity needed to grow large onions. We use a drill with a roller attached, but if the drill has none, the ground should be well rolled with a *hand roller* immediately after the seed is planted.

Cultivation.—As soon as the onions are up so they can be seen the length of the row, give them the first hoeing, just skimming the ground between the rows. We use a hoe made expressly for this purpose. The blade is eight inches long and one and a-half broad, with a long, crooked shank set in a handle five feet long. The shape of the hoe allows the earth to pass over the blade without moving it out of its place. A few days after give them the second hoeing, this time close up to the plants, after which weeding must be continued. This operation requires to be carefully and thoroughly done. The weeder must get down to his work on his knees astride of the row, stirring the earth around the plants, in order to destroy any weeds that have just started and cannot be seen. In ten days or two weeks they will require another hoeing and weeding similar to the last; and two weeks later give them still another hoeing, and if necessary another seeding. If the work has been *thoroughly done*, and at the *proper time*, the crop will not need anything more until ready to gather.

Gathering.—As soon as the tops die and fall the crop should be gathered by pulling four rows and laying them in a single one, the tops all one way, and then returning on the next four, forming a similar row, but with the tops in the opposite direction; laying the tops in this way greatly facilitates the "topping." If the weather is fine they will need no attention while curing, but if it is not they will need to be stirred by simply moving them slightly along the row. When the tops are perfectly dry, cut them off about half an inch from the bulb, and throw each pair of rows together, forming windrows about nine feet apart. After a few days more of bright weather they will be fit to store.

For Pickles or Sets.—Good ground should be used, prepared as above, but the seed sown in broad drills and *very thick*, forty to sixty pounds per acre.

How to Keep Onions Through Winter.—The essentials for the preservation of onions are dryness, thorough ventilation, coolness, and freedom from frost, or if frozen they must not be permitted to thaw and freeze again.

One of the most popular methods of keeping onions is to spread straw to the depth of eighteen inches upon the barn floor, scaffold or garret; upon this spread the onions six to ten inches deep, and cover with two feet of straw. If in good condition, and sufficient depth of covering is used, they will keep in fine condition till May.

A cool, dry cellar of some out-building, barn, or carriage-house will be found excellent for keeping onions, if it has windows for ventilation. The cellar of a dwelling house is usually too warm. They should be spread on scaffolds, about six inches deep, with room enough between the boards

for the air to circulate. On approach of cold weather, close the doors and windows, and keep the temperature just above the freezing point. With proper care they can thus be kept without freezing at all, and will come out nice and sound in the spring.

Important as thorough preparation of the ground, careful sowing and the best of after culture are, they will avail nothing unless seed of the best quality is sown. Given the same care and conditions and the product from two lots of seed of the same variety, but from different growers, may be so unequal in the quantity of merchantable onions, that the *good seed* would have been the cheaper at *ten times* the cost of the *inferior*.

We have had so long an experience in growing onion seed and are so thoroughly equipped in every way for producing that of the very best quality; that we do not hesitate to pronounce our stock equal, if not superior, to any in the country.

EXTRA EARLY RED.—A medium sized flat variety; an abundant producer, and very uniform in shape and size; moderately strong flavored, and comes into use nearly two weeks earlier than the Large Red Wethersfield; very desirable for early market use.

No. 1, Extra Early Red; No. 2, Large Red Wethersfield; No. 3, Yellow Danvers; No. 4, White Portugal; No. 5, White Silverskin; No. 6, White Globe.

LARGE RED WETHERSFIELD.—This is the standard variety, and the favorite onion in the East, where immense crops are grown for shipment. Large sized; skin deep purplish red; form round, somewhat flattened; flesh purplish-white; moderately fine grained, and stronger flavored than any of the other kinds. Very productive, the best keeper, and one of the most popular for general cultivation. It is more inclined to form large necks if planted on unsuitable soil, than the Danvers, but is the best variety of any on poor or dry soils.

SOUTHPORT RED GLOBE.—For some years the onions from Southport have commanded an extra price in the New York markets, because of their beautiful shape and color. The variety is of medium size, spherical, with small neck, very deep, rich red color, and of superior quality.

LARGE YELLOW STRASBURG, OR YELLOW DUTCH.—One of the oldest sorts. Flat, flesh white, fine grained, mild and well flavored.

MICHIGAN YELLOW GLOBE.—The largest crops of onions are always produced on rich, black lands. On such soils it is found that a globe shaped onion gives the largest return, and to meet the demands of the professional onion growers located on such lands, we have developed this variety. The bulbs are uniformly spherical, large, with very small necks; of a rich orange-yellow color, enormous yielders, and splendid keepers. No onion grower can afford to plant inferior seed when such as this can be procured.

YELLOW DANVERS.—A fine variety of medium size, globular; skin yellowish-brown; flesh white, comparatively mild and well flavored; productive, six hundred bushels per acre from seed being a not uncommon crop. By careful selection we have improved the original shape of this variety, so that to distinguish it from the old stock, many seedsmen catalogue it as *Yellow Globe Danvers*; but a true Danvers onion never can be as full or globe shaped as the *White Globe*, for it would be sure to lose some of the good qualities of the Danvers if changed in form to that extent.

WHITE PORTUGAL, OR AMERICAN SILVER-SKIN.—A large, flat onion; of mild flavor; fine for early winter use, and much esteemed for pickling. It is the best keeper of the white varieties.

PHILADELPHIA SILVERSKIN.—This is the variety so extensively grown in the vicinity of Philadelphia for the production of white sets. Though not so desirable as a mature onion, this seems to be one of the best for sets.

WHITE SILVERSKIN.—This is small, silvery white, and, from its small size and handsome appearance, is often used for pickling.

ROUND WHITE SILVERSKIN.—This is uniformly early, small, round and handsome, with an opaque white skin, which does not turn green upon exposure to the sun. They are also very compact and hard, but at the same time crisp and brittle, making them the best pickling onion ever introduced.

WHITE GLOBE.—Yields abundantly, producing handsome and uniformly globe shaped bulbs. The flesh is firm, fine grained, and of mild flavor. Sometimes called *Southport White Globe*.

EL PAZO, OR LARGE MEXICAN.—Grows in Mexico to a diameter of six inches, and to a weight of two or three pounds, and used in that region in preference to any other sort. Color variable from white to light red; flesh white, rather coarse grained, but of very mild flavor. Resembles a mammoth *White Portugal*.

FOREIGN ONIONS.

The following varieties have been tested in this country, and have given perfect satisfaction. The flavor of the Italian varieties is mild, and they are every way well adapted to culinary purposes.

QUEEN.

QUEEN.—A silver skinned variety, of quick growth and remarkable keeping qualities. If sown in early spring it will produce onions one to two inches in diameter early in summer, and if sown in July, with favorable weather, be ready to pull late in autumn, and be sound and fit for use until the following summer. Particularly valuable for pickles, as, if sown thickly, they will mature perfect, hard onions from one-half to three quarters of an inch in diameter.

EARLY NEAPOLITAN MARZAJOLA.—A beautiful, flat, white skinned variety, one of the *earliest of all*, and a good keeper. It can be sown in February or March, and will mature a crop very early in the season; or if sown in July, the crop will be matured in the same season. In the South the seed can be sown in the autumn, and large onions produced in March. Known also as *Early May*.

GIANT WHITE ITALIAN TRIPOLI.—A large,

GIANT WHITE ITALIAN TRIPOLI.

beautiful, pure white, flat onion of mild and excellent flavor, and will produce a somewhat larger onion from seed than our *White Portugal*; but to attain their full size the plants should be started very early in a hot-bed and set out in *rich soil*.

MAMMOTH SILVER KING.—An enormously large, flat onion, resembling the *White Italian Tripoli*, but is larger, slightly later and a better keeper, making it better suited for fall and early winter market. Skin silvery white, flesh pure white, very tender and mild flavored.

GIANT ROCCA.

GIANT ROCCA.—An immense onion. Globular in form; skin light brown; flesh mild and tender. It will produce a large onion from seed the first season, but to attain the largest growth, very small bulbs or sets should be put out the second spring, when they will continue increasing in size, instead of producing seed, as is the case with American onions.

BULBS.

TOP SETS, OR BUTTONS.—These produce on the top of the stalk instead of seed, a number of small bulbs or onions, about the size of acorns, which, if planted, will produce a large onion, maturing earlier than from seed. The large onion produces the top onion, and the little top onion produces the large onion.

RED BOTTOM SETS.—Produced by sowing seed very thickly in the spring and not thinning out. They mature under this method when about half an inch in diameter; and are used precisely as top onions are, setting them out in the spring, instead of sowing seed.

YELLOW BOTTOM SETS.—Identical with the preceding, except in color, and used in the same manner.

WHITE BOTTOM SETS.—The seed of the *White Silverskin* or *White Portugal* varieties is used to produce the white set. They do not keep as well as the red or yellow, but produce beautiful white onions early in the season.

ENGLISH MULTIPLIER.—Esteemed by many as the best variety for early use. It is large sized, of a mild, sweet, sugary flavor; very early and a large producer. The large onion produces several small ones in clusters around the bulb, growing mostly on the top of the ground.

Any of the preceding five varieties can be recommended as a small early crop for family use and early home market, but *not as a main crop*, the increase of marketable onions over the seed being too small. *Of all the various modes of propagation, sowing the seed for a main crop deserves the first rank. Its cheapness compared with other modes, the facility with which seed is sown, and the superior bulbs which it produces, recommend it to general use.*

PARSLEY.

French, *Persil*. German, *Petersilie*.

A very useful vegetable for flavoring soups and stews, and for garnishing. For flavoring, the green leaves are used, or they may be dried crisp, rubbed to a powder, and kept in bottles until needed.

CULTURE.—It requires rich, mellow soil. The seed is even slower than parsnip in germinating, and should be sown as early in the spring as possible, in drills one foot apart, and when the plants are well up thin to one foot in the row. The fern leaved and moss curled varieties make beautiful border plants, and ought to be grown for that purpose largely.

PLAIN.—This is the hardest variety, and is preferred by some on this account and because the leaves are darker.

CARTER'S FERN LEAVED.—This variety does not have the leaves *curled* like the *Moss Curled*, etc., but they are divided very finely, giving the whole plant a very graceful fern-like appearance. Color dark green, and on this account a favorite sort in some markets.

CHAMPION MOSS CURLED.—A compact growing, finely curled variety, of a bright green color. Very handsome and attractive.

FINE TRIPLE CURLED, OR MYATT'S GARNISHING.—A fine free growing but not large variety, the

FINE TRIPLE CURLED.

plants bearing a great number of leaves, which are so abundant and so finely curled as to cause the plant to resemble a bunch of moss. The leaves are a slightly pale green, but are exceedingly handsome and are greatly prized for garnishing and for table decorations of every kind. One of the best for market or private gardens.

TURNIP ROOTED, OR HAMBURG.—The root, which resembles a small parsnip, is the edible portion of this variety, which is extensively grown and used for flavoring soups, etc.

PARSNIP.

French, *Panais*. German, *Pastinake*.

The value of the parsnip as a culinary vegetable is well known, but is not generally appreciated at its full value for stock feeding. On favorable soil it yields an immense crop of roots, which are more nutritious than carrots or turnips, and particularly valuable for dairy stock.

HOLLOW CROWN, OR GUERNSEY.

CULTURE.—They do best on a deep, rich, sandy soil, but will make good roots on any soil which is deep, mellow and moderately rich, but fresh manure is apt to make the roots coarse and ill shaped. As the seed is sometimes slow to germinate, it should be sown as early as possible in drills two feet to two and one-half apart; cover one-half inch deep, and press the soil firmly over the seed; give frequent cultivation, and thin the plants to four to the foot. In digging field crops, they may be thrown out so as to be easily gathered, by running a breaking plow along one side of the row.

LONG WHITE DUTCH, OR SUGAR.—Roots very long, white, smooth, tender, sugary and most excellently flavored. Very hardy, and will keep through winter without protection.

HOLLOW CROWN, OR GUERNSEY.—Roots comparatively short, ending somewhat abruptly, with a small tap root; grows mostly below the surface; has a very smooth, clean skin, and is easily distinguished by the leaves arising from a cavity on the top or crown of the root.

PEAS.

French, *Pois*. German, *Erbisen*.

CULTURE.—For early peas the soil should be light, warm and sheltered, but for general crop a moderately heavy soil is better. Sow as early as possible a few of the earliest varieties on warm, quick soil, prepared the fall before. The general crop can be delayed until later, but we have met with better success from sowing all the varieties comparatively early, depending for succession upon selecting sorts that follow each other in ripening. The first sowing will mature earlier if covered only one inch deep; the other sorts should be covered from two to six inches deep, the deep planting preventing mildew and prolonging the season. Fresh manure, or wet, mucky soil should be avoided, as they cause the vines to grow too rank and tall.

The crop should be gathered as fast as it becomes fit for use. If even a few pods begin to ripen, young pods will not only cease to form, but those partly advanced will cease to enlarge.

ALL WRINKLED PEAS remain longer in season, are more delicate in flavor, and are sweeter than the smooth sorts, for as in sugar corn, the wrinkled appearance indicates a greater amount of saccharine matter.

EXTRA EARLY SORTS.

FERRY'S FIRST AND BEST.—Comparison of this stock, year after year, with that offered by other dealers places us in a position to say advisedly, that it is the first in earliness and the best in evenness of vine, and the uniformity

FERRY'S FIRST AND BEST.

with which the pods ripen. Indeed they ripen so well together that a single picking, or at most two, will secure the entire crop. Vines vigorous and hardy, about two feet high, unbranched, bearing three to seven straight pods, having five to seven medium sized, smooth peas of good quality. Dry pea medium size, smooth, white. Market gardeners and others can make no mistake in using this for their entire first early crop.

D. M. FERRY & CO'S EXTRA EARLY.—For family use this is probably equal to the preceding, though it does not ripen as evenly. Peas large enough to eat are afforded as early as from any variety, and the vines continue bearing for a week or ten days, which for family use, is a desirable quality. We cannot see that the Rural New Yorker pea offered by other seedsmen differs in any essential particular from our Extra Early.

BLISS' AMERICAN WONDER.—A variety whose stout, branching vines grow only about nine inches high, and are covered with long, well filled pods containing seven or eight large, exceedingly sweet, tender and well flavored peas, nearly as early as First and Best. We have taken particular pains in growing our stock, to be sure it is true and of the best quality.

EARLIEST OF ALL, OR ALASKA.—Without doubt the earliest and best blue pea in existence and fully as early as Extra Early. Vines two to two and one-half feet high, unbranched, bearing four to seven long pods which are filled with medium sized dark green peas of excellent flavor. We have taken great pains with our stock and think it to be the best in the country.

KENTISH INVICTA.—Vines two to three feet in height, with straight, handsome, well filled pods. Peas superior in flavor to the white sorts; when ripe of a dull blue color. Tested by the side of our Extra Early, it proved only a few days later.

EXTRA EARLY KENT.—This is a very early variety, growing about three feet high. Pods well filled with good sized peas; productive, ripening nearly all at once. An early market variety, *when true*, but has greatly degenerated of late years.

IMPROVED EARLY DANIEL O'ROURKE.—By careful selection we have secured a stock of this old and popular variety, which has all the good qualities it originally possessed.

LAXTON'S ALPHA.—The earliest tall growing wrinkled pea, about as early as American Wonder. Vines about three feet high, slender, mostly unbranched and bearing four to

McLEAN'S ADVANCER.

seven medium sized, slightly curved pods, having four to eight green, wrinkled peas of medium size and of the highest flavor. We can confidently recommend this variety as of the best quality of any tall growing early pea; especially adapted to the home garden.

FERRY'S EXTRA EARLY TOM THUMB.—Established by many years' selection from the common Tom Thumb. Vines dwarf, about nine inches high, so that it can be planted in rows ten inches apart. Peas small, round and not of the very best quality.

BLUE PETER.—Sometimes called Blue Tom Thumb. An early blue pea of fine quality; as dwarf as the Tom Thumb and a great producer. An excellent pea in all respects, and one of the best of the dwarf varieties. Peas large, round, semi-wrinkled; dull blue in color.

McLEAN'S LITTLE GEM.—A very desirable early, dwarf, green wrinkled variety, growing about fifteen inches high. When in a green state, it is very large, sweet, and of delicious flavor. This and Premium Gem are about as early as American Wonder.

PREMIUM GEM.—Somewhat like the last, but with a little shorter, heavier, more prolific vine and larger pods. This and the last fully equal the later sorts in quality, which with their earliness, dwarf habit and productiveness, make them the most desirable for private or market gardens of any on the list.

McLEAN'S ADVANCER.—A green wrinkled variety, about two and a-half feet high, with broad, long pods, which are abundantly produced and well filled to the end. Considered by some the best of its season, being of most excellent flavor. This pea is used very extensively by the market gardeners in the vicinity of New York, on account of its great productiveness, the fine appearance of its pods, and its exceedingly fine flavor. It is also very largely used among canners. After careful comparison with other stocks we are convinced that ours is the best in the country.

BLISS' ABUNDANCE.—Vine of medium height and bearing along its entire length numerous well filled pods, each containing six to eight medium sized, roundish, wrinkled peas, which are of most superior flavor. Of the forty sorts tested on our trial grounds, this cooked the quickest and was considered one of the very best in quality. This variety follows Advancer very closely and is, we think, the best sort to bridge over the time between that and Telephone.

BLISS' EVERBEARING.—A variety maturing soon after the Gems, and continuing a long time in bearing. Vine stout, about eighteen inches high, bearing at the top six to ten broad pods. If these are removed as they mature, and the season and soil are favorable, the plant will throw out from the axil of each leaf branches bearing pods which will mature in succession, thus prolonging the season. Peas wrinkled, large, cooking quickly and very tender, of superior flavor; on this account preferred by many to any other sort, although they are not quite so sweet as some.

PREMIUM GEM

TELEPHONE.

TELEPHONE.—This new pea has proved to be a valuable acquisition. Vines large, with large, coarse leaves. Pods very large, filled with immense peas, which are the largest of any, tender, sweet, and of excellent flavor. Notwithstanding the large amount of inferior and spurious stock which has been sold, no pea of recent introduction has gained more rapidly in popularity than this, thus showing that it has sterling merit which gardeners appreciate. The stock we offer has been carefully selected and is more prolific and far better than that usually sold.

LATE SORTS.

YORKSHIRE HERO.—Vines stout, about two feet high, bearing at the top a number of broad pods filled with large peas, which keep a long time in season, and never become as hard as most sorts. They are of fine quality and will be preferred to any other by those who like a rich, marrowlike pea.

CHAMPION OF ENGLAND.—Universally admitted to be one of the richest and best flavored peas grown, and very productive. Height four or five feet; seed whitish-green and much shriveled. We consider this equal in quality to any in cultivation and the best of its season either for the amateur or market gardener.

STRATAGEM.—An English variety which has become very popular in this country. Vine of medium height, but stout, with large, light green leaves, and having near the top a good number of large, long pods, well filled with large peas of good quality. The pods are the most showy of any of the varieties we offer.

PRIDE OF THE MARKET.—Vines of medium height, stiff, with large dark green leaves and bearing at the top, generally in pairs, a fair crop of very large, dark green pods well filled with large peas of good flavor. This has become popular on account of its handsome pods, and is one of the few English peas which do well in this country.

STRATAGEM

LARGE BLUE IMPERIAL.—About three feet high, and very stocky. Pods large, long, pointed, rather flat, containing eight or nine peas. Seeds large, blue and a little flattened. A good bearer, and one of the best varieties for summer use, but requires to be planted early, or it will be apt to mildew.

LARGE WHITE MARROWFAT.—Cultivated very extensively for the summer crop. About five feet high, of strong growth. Pods large, cylindrical, rough, light colored and well filled; seed large, round and yellow or white, according to the soil in which they are grown. It is excellent for summer use, but inferior in quality

to the newer sorts, although undoubtedly the most productive of the garden varieties.

LARGE BLACK EYED MARROWFAT.—An excellent variety, growing about five feet high; pods large; a prolific bearer, and can be recommended as one of the very best Marrowfat sorts.

EDIBLE PODDED VARIETIES.

These might appropriately be called "snap" peas, as they are eaten pod and all like snap beans. The pods are destitute of the tough, inner lining found in the varieties described above and are as highly prized by some as "snap" beans.

DWARF GRAY SUGAR, EDIBLE PODS.—Grows about two feet high and is remarkable for its earliness as well as its prolificness. The seeds are large, shriveled, indented, gray. The pods are broad, flat and crooked, and contain five or six peas.

TALL GRAY SUGAR, EDIBLE PODS.—About five feet in height; very sweet and tender.

FIELD SORTS.

The Golden Vine and Blue Prussian are, perhaps, the best varieties on the list for general cultivation, though large quantities of Creepers, Common White and Common Blue are used annually. The Golden Vine can be sown later than any other variety, and on lower land, as they are not liable to mildew. These varieties are used for field culture only. In their dry state they are used extensively for feeding stock, for making soups, and in the manufacture of coffee. It is highly essential to have them as free from bugs as possible, and for soups and coffee absolutely necessary. We keep constantly on hand a large stock of all these varieties, obtained from the North, where the bugs do not infest them. Our customers can rely on having the seed pure and free from bugs.

PEPPER.

French, *Piment*. German, *Pfeffer*.

CULTURE.—Should be the same as for egg plant, and the plants need quite as much heat to perfect them, but taking a shorter time to mature, the seed may be sown later, or even planted out of doors after warm weather has fairly set in. Guano, hen dung, or any other bird manure, hoed into the surface soil when the plants are about six inches high, will be found to increase the product wonderfully.

CHILI.—Used in the manufacture of pepper sauce. Pods sharply conical, and exceedingly pungent when ripe. Requires a long, warm season, and plants should be started quite early in hot-bed. We offer both the red and yellow, which differ only in color.

CHILI.

LONG RED CAYENNE.—A long, slim, pointed pod, and when ripe, of a bright red color. Extremely strong and pungent.

LARGE SQUASH.—Fruit large, flat, tomato shaped, more or less ribbed; skin smooth and glossy; flesh mild, thick meated and pleasant to the taste, although possessing more pungency than the other large sorts; very productive and the best variety for pickling.

RUBY KING.—An improved American sort reaching the largest size and yet retaining the symmetrical shape of the smaller sorts. It is very bright colored and beautiful, sweet and mild flavored, and one of the best for stuffed pickles.

LARGE BELL, OR BULL NOSE.—A very large sort, of inverted bell shape, suitable for filling or for a mixed pickle. Flesh thick, hard and less pungent than most other sorts, and one of the earliest varieties.

GOLDEN DAWN.

GOLDEN DAWN.—Plants quite dwarf but very prolific. Fruit medium sized and of inverted bell shape, rich golden yellow color, with very thick, sweet, mild flavored flesh.

SWEET MOUNTAIN.—Plants very vigorous and productive, growing upright, with moderately large leaves. Fruit very large, long, often eight inches or more in length, by two or three in diameter, very smooth and handsome, being when green of a bright deep green color, entirely free from any purple tinge, and when mature, of a rich red. Flesh very thick, sweet and mild flavored. Well suited to use as a stuffed pickle.

CARDINAL.—A new pepper with long, curved, tapering pod, about two inches thick at the stem end; very sweet and tender, and exceedingly handsome. It would be worthy of cultivation for its beauty alone, there being no flower which can be grown in the North that equals it in depth, purity and brilliancy of color.

PUMPKIN.

French, *Potiron*. German, *Kuerbis*.

The pumpkin more properly belongs to the farm than the garden, especially as it readily mixes with and injures the quality of the finer squash.

CULTURE.—Pumpkins are not so particular in regard to soil as melons or cucumbers, but in other respects are cultivated in a similar manner, though on a larger scale. They are generally raised on cultivated farms between hills of corn, but may be planted with success in fields by themselves.

LARGE YELLOW.

LARGE YELLOW.—Grows to a large size and is adapted for cooking purposes and feeding stock. It is irregular in shape and size; some being depressed and flattened at the ends, others round or elongated; of deep, rich yellow color; of fine grain and excellent flavor.

SWEET CHEESE, OR KENTUCKY FIELD.—By far the best variety for planting in the South. Large, oblong, mottled, light green and yellow, with very thick, sweet, tender, yellow flesh.

SWEET CHEESE, OR KENTUCKY FIELD.

CUSHAW.—A great favorite in some sections because of its large size, frequently growing to weigh as much as seventy pounds. In form much resembling the Winter Crookneck Squash; color light cream, sometimes slightly striped with green; flesh salmon colored. Very productive.

RADISH.

French, *Radis*. German, *Rettig*.

Cultivated chiefly for its roots, though the young seed leaves may be used as salad and the green seed pods for pickles.

CULTURE.—For the home garden sow as early in the spring as the ground is fit to work, on sandy soil, if it can be had, which is well manured with thoroughly rotted manure. Sow in drills twelve inches apart and thin to such a distance in the row as to prevent crowding. A good dressing of nitrate of soda will greatly stimulate growth and insure tender, brittle roots. Successional sowings from one week to ten days apart will keep up a supply. After the hot weather of summer begins it is better to sow the summer and winter varieties, as they do not become tough and stringy nor pithy so quickly as the early sorts. Radishes are much subject to root maggots, which make them useless for culinary purposes. We know of no effectual remedy for this pest. The best preventative measures with which we are familiar, are to avoid the use of rank manure and sowing on ground where radishes, turnips or cabbages were grown the year previous.

NON PLUS ULTRA, OR EARLY DEEP SCARLET TURNIP, FORCING.—This has as small a top and is as early as any variety in cultivation, making it one of the best

for forcing. Roots fit for use may be had in three weeks or less from time of sowing. Roots small, globular, deep rich

NON PLUS ULTRA, OR EARLY DEEP SCARLET TURNIP. FORCING.

red color; flesh white and very crisp and tender when young. May be planted very closely owing to its small tops.

EARLY SCARLET TURNIP, WHITE TIPPED, FORCING.—A beautiful variety, deep scarlet with white tip. It is very ornamental for table use, and is becoming very popular as a market variety. Fully as early as Non Plus Ultra; has as small a top and may be planted as closely and is, we think, more attractive in appearance. Cannot fail to give satisfaction as a forcing radish. Sold also as Rosy Gem, Rapid Forcing, etc.

EARLY SCARLET GLOBE.—This variety makes roots fit to pull as early as Non Plus Ultra, but they are much larger when full size, and for this reason are very popular in some markets. Roots round or slightly olive shaped; color rich deep scarlet; flesh white and tender. We commend this especially to gardeners whose markets demand a large, round, forcing radish.

EARLY SCARLET GLOBE.

EARLY SCARLET TURNIP,
WHITE TIPPED.

EARLY SCARLET TURNIP, WHITE TIPPED.—One of the handsomest of all the turnip radishes and a great favorite in many large markets for early planting out doors. While it is not a distinctively forcing radish, it is but a little later than the best of that class and will give entire satisfaction where *extreme* earliness is not the primary object. Roots slightly flattened on the under side, color very deep scarlet with a white tip; flesh white and of the best quality. We recommend this as one of the very best for early planting, either for home or market use.

EARLY WHITE TURNIP ROOTED.

EARLY SCARLET TURNIP ROOTED.—A small, round, red, turnip shaped radish, with a small top and of very quick growth. A very early variety, deserving general cultivation on account of its rich color and crisp, tender flesh.

EARLY ROUND DEEP SCARLET.—Similar in form to the Scarlet Turnip, but much darker in color. Flesh white, very crisp and tender; top small. Well adapted for growing in frames.

EARLY WHITE TURNIP ROOTED.—A little flatter than the preceding, and pure white in color, with a very small top; flesh pure white, and semi-transparent. It is a few days later than the last, and will bear the heat longer without becoming spony.

EARLY DEEP SCARLET, OLIVE SHAPED, SHORT LEAF.—This differs from the Early Scarlet Olive in being deeper in color, terminating more abruptly at the tip, coming to maturity a little earlier, and in having fewer and shorter leaves, all of which qualities make it more desirable for forcing, and we think it the best of the intermediate sorts for this purpose.

EARLY SCARLET, OLIVE SHAPED.—In the form of an olive, terminating in a very slim tap root. Skin fine, scarlet; neck small; flesh rose colored, tender and excellent. Early and well adapted for forcing or general crop.

EARLY WHITE, OLIVE SHAPED.

EARLY WHITE, OLIVE SHAPED.—Differs from the Scarlet Olive Shaped in color and in being a little longer. The roots when well grown, are clear white, crisp and mild flavored.

FRENCH BREAKFAST.—A medium sized radish, olive shaped, small top, of quick growth, very crisp and tender, of a beautiful scarlet color, except near the tip, which is pure white. A splendid variety for the table, not only on account of its excellent qualities, but for its beautiful color.

EARLY LONG SCARLET, SHORT TOP, IMPROVED.—This is a standard variety for private garden or

FRENCH BREAKFAST.

market use, particularly for out door culture. It grows six or seven inches long, half out of the ground, is uniformly straight and smooth; is very brittle and crisp, and of quick growth; color bright scarlet; top small.

LONG BRIGHTEST SCARLET, WHITE TIPPED.—We introduced this variety last year under the name of Long Deep Scarlet, but further trial convinces us

that *deep* scarlet does not do the color justice, so we have changed the name to Long *Brightest* Scarlet, as it is the brightest and handsomest scarlet color we have seen in any radish. We think this variety is a decided improvement over Wood's Frame and Long Scarlet, Short Top, in the following respects: It is earlier, making roots fit for use in about

EARLY LONG SCARLET, SHORT
TOP, IMPROVED.

twenty-five days when planted out doors, as shown by two plantings on our Trial Grounds the past summer; has a smaller top and no neck or tendency to neckiness; is a much better color, being an exceedingly bright scarlet and having a white tip, making it one of the handsomest radishes we ever saw; it is also milder flavored when grown out doors; may be used for forcing or planting out doors; grows to the same size as Wood's Frame. Market gardeners should use this altogether for early out door planting, as its color alone will make it out-sell all other sorts.

WOOD'S EARLY FRAME.—A sub-variety of the Early Long Scarlet. Short Top; is a little shorter and thicker and is better adapted to forcing. Color brilliant scarlet; flesh mild, brittle and of fine flavor.

IMPROVED CHARTIER.—Although this new American variety is too strong growing to be profitably used for forcing, it is one of the very best for early sowing out of doors. The roots come to usable size very early and remain hard and crisp until they reach a diameter of one and one-half or two inches, and so furnish good roots two or three times as long as any of the above. Roots scarlet-rose above, shading into white at the tip. They are long, cylindrical for the upper two-thirds, and then gradually taper to the tip. Flesh white, crisp and mild flavored.

LONG WHITE VIENNA.—Earlier than the last, with straight, smooth, white roots; flesh white, very tender, crisp and juicy.

LONG WHITE NAPLES.—Skin white, flesh fine grained, crisp, and of very good flavor.

LARGE WHITE SUMMER TURNIP.

LARGE WHITE SUMMER TURNIP.—One of the earliest of the summer varieties, coming to a usable size in forty days from sowing. Root round, smooth, very white and handsome. Flesh crisp, tender and rather pungent in flavor.

LONG BLACK SUMMER.—Unfortunately the Long Black Spanish winter radish is not adapted to late spring and summer culture, for the reason that when planted early it runs to seed very rapidly; while in this new and distinct sort we have a true summer radish, which may be planted from March to July and treated in every way as any other, and if planted late is as good in every respect for winter use as the Long Black Spanish Winter. Top very much smaller than in that variety; roots a little shorter, more symmetrical and with a smoother skin, and tapers more abruptly at the tip; color of skin much deeper black; flesh as white and firm, flavor about as pungent. Much the handsomest black radish we have seen and is worthy of thorough trial by all our customers.

WHITE STRASBURG.—Although this grows to the largest size it is usable

EARLY WHITE GIANT STUTTGART.

when quite small, and thus covers a long season. The mature roots are four to five inches long and about two inches thick; very white and the flesh is exceedingly crisp and tender. One of the best of the large summer sorts.

EARLY WHITE GIANT STUTTGART.—Root large, often four inches in diameter, top shaped. Skin white; flesh white and crisp and not becoming strong or pithy until very late, so that those not used as a summer radish can be stored for winter use.

GOLDEN GLOBE.—This variety is very popular in the Southern States. It is of quick growth, tender and brittle, of perfect globe shape, and golden colored skin. It seems to produce tender radishes in the hottest climates.

GRAY SUMMER TURNIP.—Round, turnip shaped, though often irregular in form. The skin of the upper part is mottled with greenish-brown, wrinkled and often marked with transverse white lines. Flesh mild, of greenish-white color, and tolerably solid. Half early, and a good variety for summer use.

WINTER VARIETIES.

CULTURE.—Sow about the same time as winter turnips, on light, rich soil, in drills eighteen inches apart; give frequent cultivation, and thin to two or three inches apart. For winter use, pull before severe frost, and store in damp sand in cellar.

LARGE WHITE SPANISH, WINTER. SCARLET CHINA, WINTER.

CALIFORNIA MAMMOTH WHITE CHINA, WINTER.—First introduced into this country by the Chinese in California. It is pure white, about one foot long, and two or three inches through, tapering regularly to the tip. The flesh is tender and crisp, and keeps well through the winter.

LARGE WHITE SPANISH, WINTER.—Roots long, top shaped, or sometimes fusiform, retaining their diameter for two-thirds their length, sharply conical at the base, and when full grown measuring seven or eight inches in length, by about three inches in diameter. Skin white, slightly wrinkled, sometimes tinged with purple where exposed to the sun. Flesh white, solid and pungent, though milder than the Black Spanish.

SCARLET CHINA, WINTER.—Roots cylindrical, or largest at the bottom, tapering abruptly to a small tap. Skin very smooth and of a bright rose color; flesh firm like the Black Spanish, but more pungent.

ROUND BLACK SPANISH, WINTER.—Roots round, sometimes top shaped, three or four inches in diameter; skin black, flesh white, very compact and highly flavored. An excellent sort for winter, as the roots keep a long time.

LONG GRAY LAON, WINTER.—Roots long, tapering regularly to the point; skin gray; flesh white. Larger and more attractive than the Black Spanish and keeping nearly as well.

LONG BLACK SPANISH, WINTER.—One of the latest as well as the hardiest of the radishes, and is considered an excellent sort for winter use. Roots oblong, black, of very large size and firm texture.

RAPE.

This plant is extensively grown in Europe and Canada for forage, especially for sheep; for the seed which is used for oil and bird food; for green manure, for which purpose there is perhaps no plant better adapted where a *quick, rank* growth is desired.

CULTURE.—Prepare the ground as for turnips and sow with a turnip drill in rows two and one-half feet apart at the rate of two and one-half pounds seed per acre. Or it may be sown broadcast at the rate of five pounds per acre. If the crop is to be grown for the seed, sow about the middle of May; if for forage or green manure it need not be sown before the middle of June.

**RHUBARB,
OR PIE PLANT.**

French, *Rhubarbe*. German, *Rhabarber*.

Rhubarb, familiarly known as Pie Plant, or Wine Plant, is cultivated in gardens for its leaf stalks, which are used for pies and tarts. Immense quantities are now annually sold in all the large markets. No private garden should be without a bed of it.

CULTURE.—Rhubarb succeeds best in deep, somewhat retentive soil. The richer its condition, and the deeper it is stirred the better. Sow in drills an inch deep, and thin out the plants to six inches apart. In the fall, trench a piece of ground and manure it well; then transplant the young plants into it three feet apart each way. Cover with leaves or litter the first winter, and give a dressing of coarse manure every fall. The stalks should not be plucked till the third year, and the plant never allowed to exhaust itself by running to seed. Our seed is saved from selected plants of Linnæus, Giant, and other improved sorts. Like the seeds of fruit trees, seed cannot be relied upon to reproduce the same variety. We have the roots for sale also.

RICE, WILD.

Zizania aquatica.

An annual which sows itself in the fall, about the middle of September, lies dormant all winter, in spring commences to sprout as soon as the water gets warm, reaching the surface during the first half of June. It grows very rapidly in one to four feet of water, ripens late in August or early in September. It should be planted in the fall, before ice forms, broadcast, from a boat, in two or three feet of water, having a mud bottom. It has been successfully planted through the ice in winter and in the spring, but it succeeds best when planted in the fall. As an attraction for wild fowl it cannot be equaled. In large ponds and lakes it purifies the water, affords a refuge for the small fry from the large fish, as well as furnishing the small fry plenty of food from the animalculæ upon its stalks; for planting in fish ponds it is especially desirable. It also does well along the shores of marshes, and makes a good hay. In the South two crops can be cut, and all cattle are very fond of it.

**SALSIFY,
OR VEGETABLE OYSTER.**

French, *Salsifis*. German, *Hofer-Wurzel*.

SALSIFY.

The long, white, tapering root of Salsify resembles a small parsnip, and when cooked is a good substitute for oysters, having a very similar flavor.

CULTURE.—It succeeds best in a light, well enriched soil, which should be stirred to a good depth. If it is necessary to use manure, it should be very fine and well rotted, for if it is fresh and coarse, the roots will grow irregular and ill shaped. Sow early and quite deep, and give the general culture recommended for the parsnip. The roots are perfectly hardy, and may remain out all winter, but should be dug early in the spring, as they deteriorate rapidly after growth commences. Store a quantity for winter use in a pit, or in a cellar in damp earth or sand.

LARGE WHITE.—The old sort; roots medium size, smooth; flesh white.

MAMMOTH SANDWICH ISLAND.—This is in every way superior to the old sort, being larger, stronger growing, and less liable to branch. Invaluable to market gardeners.

SPINAGE.

French, *Epinard*. German, *Spinat*.

The spinage is very hardy, extremely wholesome and palatable, and makes a delicious dish of greens, retaining its bright green color after cooking.

CULTURE.—Should be planted in very rich ground, the richer the better. Sow in drills one foot apart, and commence thinning out the plants when the leaves are an inch wide, and all should be cut before hot weather, or it will be tough and stringy. For early spring use the seed should be sown early in spring. In the Northern States the plants will require a slight protection of leaves or straw, but in the Southern States no protection is necessary, and they will continue their growth most of the winter.

SAVOY LEAVED.—The earliest variety and one of the best to plant in autumn for early spring use. Plant of upright growth with narrow, pointed leaves, which are savoyed like those of a cabbage. It grows quickly to a suitable size for use, but soon runs up to seed.

ROUND SUMMER.

ROUND SUMMER.—This variety is generally preferred for early spring sowing, and is the most popular with our market gardeners; the leaves are large, thick and fleshy, not quite so hardy as the Prickly Winter but stands the winter very well.

IMPROVED THICK LEAVED.—An improvement on the preceding, with larger and thicker leaves, and of more substance. Particularly recommended for market garden use.

LONG STANDING.—An improved round seeded strain of excellent merit, having all the good qualities of the ordinary sorts; what renders it especially desirable is the fact

IMPROVED THICK LEAVED.

that it is much later in going to seed than any other variety. This valuable property will be appreciated by market gardeners.

LONG STANDING PRICKLY.—The plants mature a little later than the round leaved sorts, but furnish a large quantity of very thick and well flavored leaves. This is one of the best sorts for market gardeners. Has prickly seed.

PRICKLY WINTER.—The hardiest variety, and will withstand the severest weather, with only a slight protection of leaves or straw. The seed is prickly, leaves triangular, oblong or arrow shaped. It is employed for fall sowing, which in this latitude is made about the first of September.

SQUASH.

French, *Courge*. German, *Kuerbis*.

The squash is one of the most nutritious and valuable of all our garden vegetables. The summer varieties come to the table early in the season, while the winter sorts can be had in perfection from August until the summer varieties are again in condition. Few farmers appreciate the value of winter squash as food for stock. We think an acre of squash, costing no more to cultivate and much less to secure, will give as much food available for feeding stock as an acre of corn, and we strongly urge our readers to try a "patch" for this purpose.

CULTURE.—The plants are very tender and sensitive to cold, and planting must be delayed until settled warm weather. The general principles of culture are the same as those given for cucumbers and melons, but the plants are less particular

as to soil. The summer varieties should be planted four feet apart each way, and the winter sorts eight feet. Three plants are sufficient for a hill. Care should be taken not to break the stems from the squashes intended for winter use, as the slightest injury will increase the liability to decay.

EARLY YELLOW BUSH SCALLOP.—An early, flat, scallop shaped variety; color yellow; flesh pale yellow and well flavored; very productive; used when young and tender.

EARLY WHITE BUSH SCALLOP.—Similar in form to the preceding, but with a clear, white skin, and more tender and delicate flesh. By many considered the best of the summer varieties.

MAMMOTH SUMMER CROOKNECK.—When we obtained the stock of this new and very valuable variety in 1888, we found that quite a proportion of the vines made runners. We set vigorously to work weeding out these and were so successful that we introduced it last year with the claim that it was the best summer squash in the country. Our own experience and that of our customers the past summer, fully justifies this assertion. It is the best summer squash, and for these reasons: It is twice as large as the ordinary Summer Crookneck, far more warty and several days earlier. This combination of earliness, large size and wartiness, which adds so much to its attractiveness, makes it altogether the most desirable squash for the market or private garden.

SUMMER CROOKNECK.—One of the best; very early and productive. It is small, with crooked neck, covered with warty excrescences; color bright yellow; shell very hard when ripe.

PERFECT GEM.—Vine coming into bearing late, but very productive. Fruit four inches in diameter, nearly round, ribbed, white; flesh yellowish-white and cooking very sweet and well flavored. We think this is the best of the intermediate kinds, and many think it fully equal to the winter sorts.

EARLY YELLOW BUSH SCALLOP.

WINTER VARIETIES.

EARLY PROLIFIC MARROW.—A variety developed by selection from the Boston Marrow, but much earlier, and the earliest of the winter varieties. Fruit small, of deep orange color netted with cream; shape similar to Boston Marrow; flesh thick, deep yellow, of fine quality.

IMPROVED AMERICAN TURBAN.

IMPROVED AMERICAN TURBAN (ESSEX HYBRID).—Developed by selection and crossing from the old American Turban, and differing from it in being of a richer color, having a hard shell, and in its remarkable keeping qualities. It is of medium size, and the skin is a rich orange-red. Flesh deep, rich colored, very thick and of excellent quality.

BOSTON MARROW.—A fall and winter variety, very popular in the Boston market. Of oval form; skin thin, when ripe, bright orange mottled with light cream color; flesh rich salmon yellow, very dry, fine grained, and for sweetness and excellence unsurpassed, but not as dry as the Hubbard. We have an unusually good stock of this sort.

BOSTON MARROW.

HUBBARD.—This is a superior variety, and the best winter squash known; flesh bright orange yellow, fine grained, very dry, sweet and rich flavored; keeps perfectly good throughout the winter; boils or bakes exceedingly dry and is esteemed by many to be as good baked as the sweet potato. We have taken the utmost pains with this sort and can recommend our stock as in all probability the best in the country, and think our customers can plant it in perfect confidence that every fruit will be a pure Hubbard.

HUBBARD.

BUTMAN.—This is a cross between the Yokohama and Hubbard. The flesh is between a salmon and a lemon color. It has all the qualities of a first class squash, being very dry, fine grained, and of excellent flavor. Size medium; color light stone, distinctly striped and splashed with yellowish-white.

MARBLEHEAD.—This is unquestionably an excellent keeper, and is finer grained and drier than any sort we have seen. About the size of the Hubbard, with shell of bluish-green, and bright orange flesh. Requires the whole season to mature.

WINTER CROOKNECK.—The most certain of any to produce a crop, its strong growing vines suffering less from insects than those of the other sorts. Color varying from dark green to clear yellow, frequently changing to the latter after being gathered. Flesh variable, affected by soil and weather, sometimes close grained and fine flavored, and in other cases coarse and stringy. If preserved from cold and damp, they will keep the entire year.

SUGAR CANE.

EARLY AMBER.—This variety is successfully grown in our extreme northern latitudes. It may be planted as late as the 15th of June, and will be ripe enough to manufacture in September. It is the earliest variety with which we are acquainted. The beautiful, amber colored syrup it produces is thought to be superior in flavor to any other, and for sugar it is unsurpassed. There are many varieties that can be profitably grown where the seasons are long, but this can be grown wherever Indian corn will mature. It is useless to plant cane seed before the weather is warm in spring. Three or four pounds are required per acre.

EARLY AMBER.

EARLY ORANGE.—An exceedingly valuable variety. Very large, of strong and vigorous habit, and does not fall down. Its yield is twenty-five per cent. in excess of the Early Amber. It has a very pleasant flavor. It is early, maturing only ten days later than the Early Amber. We recommend it highly to all desiring a superior cane, for all localities, excepting the extreme North.

SUNFLOWER.

The different species of *Helianthus* are largely grown for the seed, which is very valuable for feed and for oil. Some species are much planted in the flower garden for ornament.

LARGE RUSSIAN.—This variety has large heads having much more and larger seed than the common sort. Grows almost invariably to a single unbranched stalk. Sow the seed (5 to 6 lbs. per acre), as soon as the ground is fit for corn in the North, later will do just as well South, in rows three and one-half feet apart and ten inches in the row. Cultivate same as for corn. This variety will yield 900 to 1,200 pounds of seed per acre ordinarily.

For ornamental varieties see *Flower Seeds*.

TOBACCO.

Tobacco is an annual plant, and although it grows to greater size in the South, an equally good quality can be produced in the hot, dry summers of the North. We have taken a great deal of pains to ascertain which are the best varieties for the general planter, and believe the list we offer contains all that are of special merit.

CULTURE.—The seed should be sown as early as possible after danger of frost is over. A good plan is to burn a quantity of brush and rubbish in the spring, on the ground intended for the seed bed, then dig and thoroughly pulverize the earth and mix with the ashes, after which the seed may be sown and covered very lightly. When the plants are about six inches high, transplant into rows four or five feet apart each way, and cultivate thoroughly with plow and hoe.

STERLING.—The newest and brightest of the yellow type; and being the earliest to ripen, is *surest* in localities liable to early frosts.

LACKS.—Broad leaf, tough, fine fibre. On gray soils cures bright and elastic; on dark soils, rich and gummy. Known as Jesup or Beat All in some localities. Good and reliable.

HESTER.—A new variety, originated in Granville county, N. C. Has no superior for the yellow type, and makes fine cigar stock. It has size, shape, texture and color, and ripens early. It recommends itself greatly in this, that it has greater adaptability over a wider range of soils and latitude than any other of the yellow varieties, and may, on this score, be considered the *surest*.

SWEET ORONOCO.—Used for first class plug fillers, and makes, when sun-cured, the best Natural Chewing Leaf. A favorite for the "Homespun" wherever known. Known as Little Oronoco in some localities. Makes an Eastern Filler unsurpassed.

BRADLEY BROAD LEAF.—A popular variety for several types—export, manufacturing and cigars.

PERSIAN ROSE.—Finer than the Muscatel, and may be relied upon to make the finest cigar stock. A very promising variety.

BIG HAVANA.—A hybrid Havana or Cuban seed leaf. A heavy cropper, of fine texture, delightful flavor and the earliest cigar variety to mature and ripen. Will make two crops from one planting in the South, while its earliness makes it most desirable for high latitudes.

CONNECTICUT SEED LEAF.—Best adapted to the climate of the Middle and Northern States, as it is more hardy and endures the cold better than the tender varieties grown south. In many of the Northern States and in Canada, this variety is the staple crop.

HAVANA.—From pure Cuban grown seed, raised in the famous district of Vuelta de Abajo. When grown in this country commands a high price for cigar stock.

TOMATO.

French, *Pomme d'Amour*. German, *Liebesapfel*.

CULTURE.—Tomatoes do best on light, warm, not over rich soil, and success depends upon securing a rapid, vigorous, unchecked growth during the early part of the season. Sow in hot-beds during March, or from six to eight weeks before they can be set out of doors; when the plants have four leaves transplant into shallow boxes, setting them four or five inches apart; give plenty of air, and endeavor to secure a vigorous, but steady and healthy growth, so that at the time of setting in the open ground they will be strong and stocky, about as broad as high. A slight check while the plants are small will materially diminish their productiveness. Set out of doors as soon as danger from severe frosts is over, but before doing so harden off the plants by gradually exposing them to the night air and by the withdrawal of water until the wood becomes hard and the leaves thick and of a dark green color. Transplant carefully and cultivate well as long as the vines will permit. The fruit is improved in quality if the vines are tied to a trellis or to stakes.

FIRST EARLY SORTS.

ATLANTIC PRIZE.—The fault of the distinctively early tomatoes has been heretofore that they have been lacking in size and shape. This is all changed now, and instead of the

small, rough, deeply corrugated fruits of the Hundred Day type we have an extra early variety, which will average with three-fourths of the medium and late sorts in both size and smoothness. That the Atlantic Prize ripens up a large proportion of its crop the earliest of any tomato in existence, has been proven by us conclusively after repeated plantings with all the other so called extra early varieties year after year on our Trial Grounds. As for its size, the Michigan Agricultural Experiment Station records our own experience when it says, "It was the largest distinctly early tomato grown this year," [1890] It is not only the largest, but the

ATLANTIC PRIZE.

smoothest, best flavored and the brightest red color. Vine medium size, with few leaves, very hardy, bearing the fruit low down on the stem and in enormous clusters which ripen all together. Those whose trade demands that they have a large, smooth, good flavored, *very early* fruit will find this variety to be just what they want. We have planted this sort and the Early Ruby side by side two seasons, and cannot see that they are in any way different, except that our stock of Atlantic Prize has been the more carefully selected.

EARLY CONQUEROR.—This is an extra early sort, and is *very* popular. Vines vigorous, productive, bearing immense clusters of fruit, medium size, irregular, flattened and slightly corrugated, of scarlet-crimson color, often dotted and splashed with golden yellow markings.

CANADA VICTOR.—*Very early*. Vines large, spreading, productive. Fruit of light scarlet color, round, smooth, of medium size, solid and ripening up well. We have so far

CANADA VICTOR.

improved this and Early Conqueror in smoothness and evenness of size of fruits by constant and careful selection, that they would not be recognized in these respects as the sorts originally offered under these names.

EARLY MICHIGAN.—This is not a new tomato, for we offered it first in 1889 and have been offering it since as Early Red Apple. We very speedily learned, however, that we had given this splendid sort an unfortunate name, our patrons naturally inferring that it was the counterpart of the old White Apple except in color, or at best much the same as the Red Apple of long ago, while nothing could be further from the truth. With all our long experience with tomatoes, having tested at one time or another nearly every variety offered by seedsmen, we confidently claim that there is no better variety than this for general market or family use. We speak thus emphatically because we have given a great amount of time and expense to perfecting our stock and know that for smoothness and regularity of shape, uniformity of size and color and freedom from rot or cracking, this variety is unsurpassed. It is not only an extremely smooth and perfectly shaped tomato, but it is also *very early*, ripen-

ing its first fruits almost as early as any sort in cultivation. Vines large, with large, dark green leaves; vigorous and wonderfully productive, being, we think, under high culture, one of the heaviest croppers of any; fruit medium size to large, and unlike most varieties growing larger as the season advances, perfectly smooth, solid, but without any core, deep, rich red color, and of excellent flavor.

RED VARIETIES FOR GENERAL CROP.

D. M. FERRY & CO'S OPTIMUS.—A variety introduced by us, and, we believe, the best table tomato in existence. Vine medium sized, but vigorous, healthy and productive, bearing its fruit in clusters of five. Although not presented as a first early sort, many of our customers report that they have obtained ripe fruit from this as early

D. M. FERRY & CO'S OPTIMUS.

as from any variety. Fruit medium sized, oval, very smooth and of exceedingly bright, crimson-scarlet color; very free from cracks and rotting but little. The flesh is of a crimson-scarlet color, quite distinct from that of any other sort; it is also the best in flavor and entirely free from the hard spots found in so many other large sorts. The Optimus is not only one of the best for home use and for market, but it is one of the best canning tomatoes. One who plants this sort either in a garden or for market will be satisfied that it is *the most productive, the handsomest and best tomato.*

LIVINGSTON'S FAVORITE—Vine medium, with large, dark green leaves, having numerous clusters of from three to seven large tomatoes, which are a rich dark red color, of oval outline, exceedingly smooth; flesh very firm, but without green spots. This is a favorite variety, on account of its smooth, handsome fruit.

TROPHY.

TROPHY.—Well known as one of the best. Vines of medium size, but producing compact clusters of fruit in immense quantities; fruit large, smooth, of bright red color, solid and of good flavor. We have expended a great deal of labor on the improvement of this old sort, and think that the seed we offer is as good as can be grown.

PARAGON.—Vine large, vigorous and productive, and continuing so until killed by frost. Fruit large, round, of a dark, crimson-scarlet color, with occasionally a purplish tinge. It ripens up evenly, and the flesh is fine flavored.

LIVINGSTON'S PERFECTION.—A variety similar to the last, but an improvement upon it, being a little earlier, and

invariably smooth and handsome. It is one of the handsomest tomatoes grown, and all who have tried it pronounce it of the highest quality.

LIVINGSTON'S PERFECTION.

IGNOTUM.—We have not been in a position to offer this before, because of the fact that the stock was not entirely free of a tendency to produce an occasional plant which was not true. We have by careful selection succeeded in eliminating this tendency and now offer it as one of the purest and best stocks of this sort, and we think it to be, perhaps, on the whole the best very large red fruited tomato. Vines large, with large leaves, very productive; fruit under favorable conditions grows to the largest size; smooth, regular in shape, very solid and absolutely without the solid core so objectionable a feature of nearly all large sorts. Color deep crimson and very attractive. We hope all our patrons will give this a trial, because where it does not rot, its one fault, it is likely to be used to the exclusion of most other varieties.

PURPLE FRUITED SORTS.

ACME.—We have given a great deal of attention to the improvement of this variety, and think we have succeeded in making it the smoothest, the evenest in size, and the earliest of the purple fruited sorts. Vines large, hardy and productive, ripening its first fruits almost as early as any and continuing to bear abundantly until cut off by frost. Fruit in clusters of four or five, invariably round,

ACME.

smooth and of good size, free from cracks and stands shipping remarkably well; flesh solid and of excellent flavor. For market gardeners who want an early purple fruited tomato, either for home market or to ship, for private gardens or for canners, it stands without a peer among its class.

ESSEX EARLY HYBRID.—Very similar to the Acme, fruit slightly darker purple, always smooth and handsome; quality among the best. Will certainly give satisfaction wherever the Acme does.

DWARF CHAMPION.—This is a purple fruited variety the principal merit of which is the dwarf habit of the vines, which grow about three feet high. The branches are also proportionately short, making a bushy plant that stands quite erect without stakes. Fruit smooth, medium size; color purplish-pink, fairly solid, but has no hard core, and is of good flavor. About as early as any purple fruited tomato, and is quite popular in some parts of the country.

LIVINGSTON'S BEAUTY.—We have been selecting this to a larger, smoother fruit than the original stock, until now we think we have made it the smoothest and best of the large purple sorts. Vines large, vigorous and heavy bearers; fruit large, uniform in size, very smooth, color of skin purplish-pink; flesh light pink and of excellent flavor. While we think the color weak for canning, it is used considerably for this purpose.

TURNER'S HYBRID, OR MIKADO.—The largest purple fruited tomato, single fruits of which weigh as much as twenty-eight ounces, while the average weight is probably

TURNER'S HYBRID, OR MIKADO.

not less than twelve ounces. Vines large, coarse growing, with leaves entire like those of the potato plant; very productive and is early for so large a tomato; fruit extremely large, rough, solid, with few seeds. Demanded by those who want an *extra large* fruit particularly.

CINCINNATI PURPLE.—Fruit very large, deep purplish-red, solid and of good flavor. We have compared this with Surprise and other large sorts and have found it as large as any and smoother. We have picked fruits weighing one and one-half pounds which were as perfect and smooth as a Favorite.

GOLDEN QUEEN.—The superior flavor of the yellow varieties is bringing them into favor as table fruit, and those who think of a yellow tomato as the rough fruit of the old yellow sorts will be surprised at this smooth, beautiful fruit, it being as smooth as the best of the red varieties, and of a fine and distinct flavor.

GOLDEN QUEEN.

WHITE APPLE.—This old sort is often presented as a novelty under a new name. While no one should plant largely of it for market or home use, it is a good variety for eating from the hand as a fruit. The fruit is about one and one-half inches in diameter, round, perfectly smooth and of a yellowish-white color. Flesh very mild flavored and delicate and is valued by some for making preserves.

PEACH.—This is a distinct and very attractive appearing tomato, highly desirable for preserving, eating from the hand or table decoration. Fruit resembles a peach in shape, size and color, and is covered with a delicate furze, which makes the deception quite complete; flesh tender and of good flavor. Should find a place in every garden.

RED PEAR SHAPED.—Used for preserves and to make "tomato figs." Fruit bright red, distinctly pear shaped, and with a peculiar flavor. Our stock is the true pear shaped, and not the larger Red Plum tomato which is often sold under this name.

YELLOW PLUM.—Fruit plum shaped, clear deep yellow color; flesh yellow and fine flavored; much esteemed for preserves.

RED CHERRY.—Fruit small, about five-eighths of an inch in diameter, perfectly round and smooth. Fine for pickles and preserves.

YELLOW CHERRY.—Differing from the above only in color.

GROUND CHERRY, OR HUSK TOMATO.—This is much liked by many for preserves and for eating from the hand. The seed we offer is that of the *true* Yellow Ground Cherry, and not the purple fruited sort which is scarcely edible.

TURNIP.

French, *Navet*. German, *Rueben*.

This wholesome and agreeable vegetable has been cultivated from time immemorial, as a field crop, and is one of the staple products of the farm. It is most easily affected in its form and flavor by soil, climate and mode of culture. There are a great many varieties, but we have selected the following as the best for the garden or farm.

CULTURE.—Sow in drills fourteen inches apart, and half an inch deep, or sow broadcast, but in either case be sure to have the ground freshly dug. Keep them perfectly free from weeds, and when the bottoms begin to enlarge, brush away the dirt from about the roots to the depth of half an inch or more, and give them a light dressing of wood ashes. This is the surest mode of obtaining fair and smooth turnips in old gardens, where they are almost certain to grow wormy or strong flavored if the earth is allowed to remain in contact with the roots. For the spring and summer crops it is important to get them started very early, so that they may have time to grow to sufficient size before hot weather, when they will soon become tough and strong.

FOR TURNIPS.—For the fall and main crop, sow in the Middle and Western States from the middle of July to the last of August, as directed for the spring sowing. In the field, turnips are more generally sown broadcast, though much the larger crops are obtained by drill culture.

FOR RUTA BAGAS.—The Ruta Baga is usually sown from the 20th of June till the 15th of July, in two-foot drills, and thinned out to ten inches apart. It is necessary that the ground should be dry and made very rich.

To preserve turnips in good order for winter, store them in barrels placed alongside the wall of a cool cellar and cover them with sand or turf to keep them fresh. Another method is to put them in a cellar or dry pit, and cover with straw, and then earth over to the depth of eight or ten inches. Thus protected, they will keep well till spring.

For feeding stock in fall and winter, there is nothing superior to Turnips and Ruta Bagas, and they will yield a larger amount of food than almost anything else on the same space of ground. We cannot too earnestly recommend farmers to increase their sowings largely, for we are sure no crop will prove more remunerative.

EXTRA EARLY PURPLE TOP MILAN.

EXTRA EARLY PURPLE TOP MILAN.—Tops very small, distinctly strap leaved, and growing very erect and compact. This forms bulbs the earliest of any sort. The roots are *very white*, with clear purple top. The most desirable sort for forcing, or very early planting out doors.

EARLY WHITE FLAT DUTCH, STRAP LEAVED.

EARLY WHITE FLAT DUTCH, STRAP LEAVED.

—A most excellent early garden variety, much used in the Southern States. Roots medium size, flat; color white; very early, sweet and tender. It is designed for table use, and is spongy and inferior when overgrown.

D. M. FERRY & CO'S IMPROVED EARLY PURPLE TOP, STRAP LEAF.

D. M. FERRY & CO'S IMPROVED EARLY PURPLE TOP, STRAP LEAF.—This is an early variety and a great favorite for table use; form exceedingly flat, like a broad disc in shape, and of medium size; color purple or dark red above ground, white below; flesh white, fine grained and tender; leaves few, entire, upright in growth, resembling those of a horse radish; a purely American variety, and one of the best for general planting.

WHITE EGG.—A quick growing, egg shaped, perfectly smooth, pure white variety, growing half out of the ground, with small top and rough leaves. Its smooth, white skin and quick growth make it particularly adapted for fall market purposes. The flesh is very sweet, firm and mild, never having the rank, strong taste of some varieties.

PURPLE TOP WHITE GLOBE.—A variety of the purple top flat turnip, from which it originated. It is globular in form, and nearly as large as the Pomeranean White Globe; of beautiful appearance, of most excellent quality, and equally desirable for table or stock. It keeps well and is a fine market sort.

COW HORN, OR LONG WHITE.—This variety is carrot like in form, growing nearly half out of the ground, and generally slightly crooked. It is pure white except a little shade of green at the top. It is delicate and well flavored, of very rapid growth, and has obtained considerable favor as a market sort for fall and early winter use. It is increasing in demand every year.

LARGE RED TOP NORFOLK.—A handsome, spherical or slightly flattened root, reddish-purple above ground, with small top. An excellent variety, grown both for table use and stock.

LARGE WHITE NORFOLK.—A standard sort for field culture, and

COW HORN, OR LONG WHITE.

extensively grown all over the world for stock feeding. Shape spherical, or slightly flattened; color white; often attains a very large size. The seed should be sown a little earlier than table sorts. It is allowed to stand out during the winter in the South and Southwest, where the tops are used for greens.

LARGE WHITE NORFOLK.

POMERANEAN WHITE GLOBE.—Is one of the most productive kinds; in good, rich soil the roots will frequently grow to twelve pounds in weight. It is of perfect globe shape; skin white and smooth; leaves dark green and of strong growth.

POMERANEAN WHITE GLOBE.

SWEET GERMAN.—This variety is very popular in many sections, notably so in the New England States. It partakes largely of the nature of the Ruta Baga, and should be sown a month earlier than the flat turnips. The flesh is white, hard, firm and sweet, and it keeps nearly as well as the Ruta Baga. Highly recommended for winter and spring use.

SEVEN TOP.—Cultivated extensively in the South for the tops, which are used for greens. It is very hardy, and will grow all winter, but does not produce a good root, and is only recommended for the tops.

YELLOW FLESHED SORTS.

EARLY YELLOW MONTMAGNY.—An early sort; the most beautiful of the yellow fleshed varieties. Leaves medium sized, green, stained with purple; bulb oval; medium sized, clear yellow, stained with bright purple at the top; flesh yellow, fine grained, sweet and tender. Among the earliest, and an exceedingly popular sort.

EARLY YELLOW MONTMAGNY.

ORANGE JELLY, OR ROBERTSON'S GOLDEN BALL.—Undoubtedly among the most delicate and sweetest yellow fleshed turnips yet introduced. Not of large size, but firm, hard and of most excellent flavor. Keeps well, and is superior as a table variety.

ORANGE JELLY, OR ROBERTSON'S GOLDEN BALL.

LARGE AMBER GLOBE.—One of the best varieties, either for table use or for a field crop for stock. Flesh yellow, fine grained and sweet; color of skin yellow, with green top. Hardy, keeps well, a good cropper, and grows to a very large size. Very popular South.

PURPLE TOP YELLOW ABERDEEN.—Roots medium sized, round; flesh pale yellow, tender and sugary; hardy and productive, and keeps well. It is an old, esteemed variety, considered as approaching very nearly to the Ruta Baga in hardness and firmness of texture.

SWEDES, OR RUTA BAGAS.

CULTURE.—Sow the seed about a month earlier than the preceding varieties of turnips, which should be about the middle of June in this latitude. They should be sown on ground enriched with well rotted manure in drills two and one-half feet apart and thinned to six to eight inches apart in the row. These are sometimes sown broadcast and let take their chances with the weeds and bugs, but we do not think they should ever be treated this way if it can be possibly avoided. Keep the weeds thoroughly in check with the hoe or cultivator, and when the roots have grown full size and before hard freezing weather, pull, cut off the tops and store in a root cellar or pit.

SWEET RUSSIAN, OR WHITE RUTA BAGA.—This variety is most excellent, either for the table or stock.

It grows to a very large size; flesh white, solid, of firm texture, sweet and rich; keeps better than any of the preceding, and is very popular.

LAING'S PURPLE TOP RUTA BAGA.—This variety grows very large, is early, an excellent keeper, and of fine flavor. Roots globe shape; skin purplish-red above ground and yellow below; flesh yellow, necks small; tops peculiar in that they are strap or entire leaved. An excellent variety in every way.

D. M. FERRY & CO'S IMPROVED PURPLE TOP YELLOW RUTA BAGA.—The best variety of Swedish turnip in cultivation. Hardy and productive. Flesh yellow, of solid texture, sweet and well flavored; shape slightly oblong, terminating abruptly with no side or bottom roots; color deep purple above, and bright yellow under the ground; leaves small, light green; with little or no neck; the most perfect in form, the richest in flavor and the best in every respect.

MONARCH, OR TANKARD RUTA BAGA.—This is a new, yellow fleshed sort, having very large tankard shaped roots, with relatively small necks and tops. Color purplish-crimson above ground, yellow below; flesh very solid, fine grained and of the best flavor. We consider this one of the best of all the ruta bagas for general planting.

MONARCH, OR TANKARD RUTA BAGA.

CARTER'S IMPERIAL PURPLE TOP RUTA BAGA.—A most excellent sort either for table use or feeding stock. Flesh yellow, solid, firm, sweet and rich. It is a hardy sort, yields heavily, with no tendency to long necks.

SUTTON'S CHAMPION RUTA BAGA.—Roots large, spherical, purple on top; flesh yellow, tender and sweet; an excellent keeper and enormous yielder.

YELLOW SWEDE, OR RUTA BAGA.—Shape oblong; dull reddish color above ground, but yellow underneath; is harder than the common turnip, and will keep solid till spring.

BANGHOLM RUTA BAGA.—A very superior variety, both in form and quality, and held in high estimation in many parts of England. Of large size, small neck, few or no side roots, and yields well. Flesh yellow, sweet and solid; skin yellow with purple top.

AROMATIC, MEDICINAL,

—AND—

POT HERBS.

GENERAL CULTURAL DIRECTIONS.—Most of the varieties thrive best on rich, sandy soil, which should be carefully prepared and well cultivated, as the young plants are for the most part delicate and easily choked out by weeds. Sow as early as the ground can be made ready, in drills sixteen to eighteen inches apart, taking pains that the soil is fine and pressed firmly over the seed, or they may be planted as a second crop—the seeds sown in beds in April, and the plants set out in June. Most of them should be cut when in bloom, wilted in the sun, and thoroughly dried in the shade.

ANISE (*Pimpinella anisum*). French, *Anis*. German, *Anis*.—A well known annual herb whose seeds, which have an agreeable aromatic odor and taste, are used for dyspepsia and colic and as a corrective of griping and unpleasant medicines. Sow early and thin to three inches apart in the row.

BALM (*Melissa officinalis*). French, *Melisse*. German, *Melisse*.—A perennial herb, easily propagated by division of the root or from seed. The leaves have a fragrant odor, similar to lemons, and are used for making balm tea for use in fevers, and a pleasant beverage called balm wine. Plant early and thin to ten inches apart.

BENE (*Sesamum Indicum*). French, *Bene*. German, *Bene*.—Much used in the South, but too tender for the North. The seeds are used for food, and furnish an oil which does not easily become rancid, and is used for softening and whitening the skin. The leaves, if immersed in a tumbler of water, will convert it into a mucilaginous drink very beneficial in cases of cholera infantum, diarrhoea, etc. Do not plant until settled warm weather, and allow the plants to stand two feet apart.

BORAGE (*Borago officinalis*). French, *Bourrache*. German, *Borretsch*.—A hardy annual, used as a pot herb, and for bee pasturage. The leaves immersed in water give it an agreeable taste and flavor. Sow in April and thin to eight inches apart. In some places this becomes a troublesome weed.

CARAWAY (*Carum carui*). French, *Carvi*. German, *Kummel*.—Cultivated for its seeds, which are used in confectionery, cakes, etc., and the leaves are sometimes used in soups. If sown in August the plants will give a fair crop of seed the next season. Plant in drills two or three feet apart, and thin to six inches apart in the row.

CAT-MINT, OR CATNIP (*Nepeta cataria*). French, *Nepeta*. German, *Katzenkraut*.—A hardy perennial, well known as a valuable mild nerve for infants. The plant should be pulled up by the roots when in full flower, and dried in the shade. The seed may be sown either in the fall or early spring, in drills twenty inches apart.

CORIANDER (*Coriandrum sativum*). French, *Coriandre*. German, *Koriander*.—A hardy annual, cultivated for its seeds, which have an agreeable taste, and are used in confectionery and to disguise the taste of medicines. Sow early in the spring, and gather on a dry day, bruising the stems and leaves as little as possible, as when injured they have a disagreeable odor, which they impart to the seed.

DANDELION (*Leontodon taraxacum*). French, *Pissenlit*. German, *Löwenzahn*. *Improved Thick Leaved*.—Those who only know the dandelion as the persistent weed of our roadsides and lawns, know no more of its real value than one who has only seen the poisonous wild parsnip or carrot knows of the value of these vegetables. *The improved variety makes one of the earliest and best greens in cultivation.* For this purpose sow early in the spring, on very warm, rich soil, in drills eighteen inches apart; thin the young plants to five inches in the row, and cultivate well, and they will be fit for cutting the next spring. It is also grown extensively for its roots; for this purpose sow in September, and cultivate well during the fall and the following season, and the roots will be fit to dig in October.

DILL (*Anethum graveolens*). French, *Aneth*. German, *Dill*.—An annual cultivated for its seeds, which have an aromatic odor, and a warm, pungent taste. They are good for flatulence and colic in infants, and are sometimes added to pickled cucumbers to heighten the flavor. Sow early in spring, and keep clear of weeds.

HOREHOUND (*Marrubium vulgare*). French, *Marrube*. German, *Andorn*.—A perennial herb, with a strong, aromatic smell, and a bitter, pungent taste. It is a tonic, and enters largely into the composition of cough syrups and lozenges. Will thrive in any soil, but is stronger if grown on light, poor land.

HYSSOP (*Hyssopus officinalis*). French, *Hyssope*. German, *Isop*.—A hardy perennial with an aromatic flavor, and warm, pungent taste. It is a stimulant and expectorant and is used in asthma and chronic catarrh. The flowering summits and leaves are the parts used. It likes a dry, sandy soil, and the plants should be thinned to twelve inches apart.

LAVENDER (*Lavendula vera*). French, *Lavende*. German, *Lavendel*.—A hardy perennial, growing about two feet high. Its long spikes are used for the distillation of lavender water, or are dried and used to perfume linen. It does best in light, warm soil. The flowers should be picked before fading and dried quickly.

ROSEMARY (*Rosmarinus officinalis*). French, *Romarin*. German, *Rosmarin*.—A hardy perennial with fragrant odor, and a warm, aromatic, bitter taste. May be easily raised from seed, but does not reach a size fit for use until the second season. The dried leaves deteriorate rapidly by keeping.

RUE (*Ruta graveolens*). French, *Rue*. German, *Raute*.—A hardy perennial with a peculiar smell. The leaves are bitter, and so acrid as to blister the skin. It is a stimulant and anti-spasmodic, but must be used with great caution, as its use sometimes results in serious injury. It must not be suffered to run to seed, and does best on poor soil.

SAFFRON (*Carthamus tinctorius*). French, *Safran*. German, *Saffran*.—A hardy annual from Egypt, but which has become naturalized in many parts of the country. Cultivated for its flowers, which are used in dyeing, and to make the cosmetic powder called *rouge*, also to adulterate the valuable European Saffron, which is the flower of the *Crocus sativus*, and has strong medicinal properties. Sow early and gather the leaves before fading, drying them in the shade.

SAGE (*Salvia officinalis*). French, *Sauge*. German, *Salbei*.—A hardy perennial, possessing some medicinal properties, but cultivated principally for use as a condiment, it being used more extensively than any other herb for flavoring and dressing. Sow early in spring on very rich ground, cultivate often, and thin the plants to sixteen inches apart. Cut the leaves and tender shoots just as the plant is coming into flower, and dry quickly in the shade. The plants will survive the winter, and may be divided. If this is done they will give a second crop superior in quality to the first.

SWEET BASIL (*Ocimum basilicum*). French, *Basilic*. German, *Basilikum*.—A hardy annual from the East Indies. The seeds and stems are used in flavoring soups and sauces, and have the flavor of cloves.

SWEET FENNEL (*Feniculum officinale*). French, *Fenouil*. German, *Fenchel*.—A hardy perennial. The leaves are largely used in Europe in soups, fish sauces, garnishes and salads, the seed being sometimes used in confectionery. Sow and cultivate like Anise.

SWEET MARJORAM (*Origanum marjorana*). French, *Marjolaine*. German, *Marjoram*.—A perennial plant, but not hardy enough to endure the winter in the North. The young, tender tops are used green for flavoring, or they may be dried for winter use. Sow in drills as early as possible, and thin out the plants to ten inches.

SUMMER SAVORY (*Satureia hortensis*). French, *Sarriette annuelle*. German, *Bohnenkraut*.—A hardy annual, the dried stems, leaves and flowers of which are extensively used for flavoring, particularly in dressings and soups. Culture the same as that of Sweet Marjoram.

TANSY (*Vanacectum vulgare*). French, *Tanaïsie*. German, *Wurmkraut*.—A hardy perennial plant from Europe, but growing wild in many parts of the country. The leaves, when green, have a peculiar, aromatic odor, which they lose in drying. Cultivated for its medicinal properties, which are those common to bitter herbs.

THYME (*Thymus vulgaris*). French, *Thym*. German, *Thymian*.—This herb is perennial, and is both a medicinal and culinary plant. The young leaves and tops are used for soups, dressing and sauce, and a tea is made of the leaves which is a great remedy in nervous headache. Sow as early as the ground will permit.

THYME.

WORMWOOD (*Artemisia absinthium*). French, *Ab-sinthe*. German, *Wermuth*.—A perennial plant of strong and fragrant odor, and aromatic, but intensely bitter taste. The leaves are used as a tonic and vermifuge, and also for fresh bruises. Is raised from seed and propagated by cuttings, or dividing the roots. A dry, poor soil is best adapted to bring out the peculiar virtues of this plant.

FRUIT TREE SEEDS.

APPLE.—Apple seeds do not produce the same varieties, but generally give a hardy, though inferior sort, and upon these seedlings are grafted or budded the finer varieties. The seeds may be planted in the fall, in rows two feet apart, or they may be planted in early spring, but in that case the seed must first be mixed with damp sand and frozen, after which care must be taken that they do not become dry before planting. As soon as the plants are up, they should be well cultivated, and every effort made to secure a vigorous growth the first season. As soon as the plants are large enough they may be budded in the summer or grafted in the spring.

CHERRY, MAZZARD.—This is the stock used for standard trees. Success is much more certain if the seed is planted in the fall, as it is very difficult to keep it in good condition through winter. The general culture should be the same as for the apple, except that budding should be employed instead of grafting.

CHERRY, MAHALEB.—Used as stocks when dwarf trees are wanted. Culture same as the above.

PEAR.—Success will depend very largely upon having a deep, rich, moist soil, as this is essential to vigorous growth. Plant and cultivate like the apple, and bud when large enough. Every effort should be made to secure a rapid and vigorous growth from the first.

PEACH.—Plant three inches deep in nursery rows three feet apart, in the fall, or if delayed until spring, crack the pits and plant the kernels only. They should be large enough to bud the first season, and may be profitably set in orchards two years from planting.

PLUM.—The directions given for planting apples will also apply to plums, except the pits should be planted further apart in the row. The varieties raised from seed will be hardy, vigorous stalks upon which to graft the choicer sorts.

QUINCE.—Quinces generally produce the same variety from seed, but occasionally vary. The general culture and requirements of soil are the same as for the pear, except that they are not budded.

FOREST TREE AND HEDGE SEEDS.

Few investments made by our farmers will return a larger profit in the course of a few years than the planting of land now uncultivated, or cultivated at a loss, to forest trees. The time is coming, not only surely, but rapidly, when a few acres covered with our best forest trees will be of great value.

EVERGREEN TREE SEEDS.

The seeds of evergreen trees should be kept till time of sowing in a dry, cool place. As early in spring as the ground can be worked, the seeds should be sown thinly in beds of fine, sandy loam, raised about four inches above the general surface. The seeds can be raked in, or if very small, they may lie upon the surface and then be rolled in or patted with the back of the spade to firm the earth around the seeds. Then water very sparingly, and with a fine spray. The young plants are very apt to damp off, and need to be shaded from the hot sun and drying winds. A good shade can be made of laths nailed two inches apart to a light frame. This should be supported about eight inches above the seed bed in such a way as to be easily removed to allow cultivation and weeding. Do not allow the young plants to become choked with weeds, and let them remain one or two years before transplanting to permanent ground.

AMERICAN ARBOR VITÆ (*Thuja occidentalis*).—Seldom over thirty feet high. Grows well under cultivation, and is one of the best for a hedge as a screen and wind break. It is best grown from seeds, which should be sown and the seedlings transplanted as directed above.

SILVER FIR (*Abies pectinata*).—An important timber tree, and grows to a large size. When young the trees are tender and easily injured by frost, but as they grow larger are entirely hardy.

HEMLOCK (*Tsuga Canadensis*).—One of the most beautiful of our native evergreen trees. Of graceful habit with graceful and delicate foliage. The bark is used to an immense extent for tanning leather. It requires a light, dry soil.

SCOTCH PINE (*Pinus sylvestris*).—Very hardy, and growing surely and rapidly on nearly every variety of soil, forming a beautiful tree, and invaluable as a wind break.

WHITE OR WEYMOUTH PINE (*Pinus strobus*).—The most majestic and valuable of all our native pines, and has furnished immense quantities of the white pine lumber so well known throughout the country. It thrives best in a light sand with clay subsoil, and prefers plains and broad river valleys to higher lands.

NORWAY SPRUCE (*Abies excelsa*).—Well known as one of our most beautiful evergreen trees. It is hardy, of rapid growth, and forms a dense, close screen, or hedge. About 20,000 seeds to the pound.

DECIDUOUS TREE SEEDS.

With the seeds of deciduous trees a little care only is required in sowing at the proper season to insure success. Those with hard shells like the locusts should be planted in the fall or placed in boxes with sand and exposed to frost before planting, otherwise they may lie in the ground from one to three years without sprouting. If too late in spring to expose them to the action of frost, pour boiling water over the seeds and let it stand till cool, when a portion of the seeds will have swollen; pick these out and scald the rest again, continuing till all have swollen.

The seeds of the other deciduous trees on our list should be planted from the middle of April to the middle of May, in drills about two feet apart, and covered to the proper depth: about twice the diameter of the seed.

WHITE ASH (*Fraxinus Americana*).—Requires a moist, deep soil, on which it will grow very rapidly. It deserves special attention from those who wish to grow trees for timber. Succeeds best from seeds, which should be planted like corn, where the trees are to stand, but not over an inch in depth. When grown singly it is very ornamental, forming a large, round head.

EUROPEAN ASH (*Fraxinus excelsior*).—Succeeds best in rather a warm climate; thrives upon the plains in deep soils, but does poorly on stiff clay or light, sandy soils. Its timber is valuable in carriage making and manufactures.

BEECH (*Fagus ferruginea*).—Although not a very rapid growing tree, this makes one of the best for the lawn or park. The seeds should be sown as early as possible in the spring, in fine mellow soil pressed firmly over them. They germinate quickly and the young plants are quite hardy. They should be early transplanted to nursery rows and given plenty of room.

WHITE BIRCH (*Betula alba*).—Valuable for ornamental planting, and a favorite wood for shoe pegs, spools, bobbins, and similar small articles. The birch prefers a cool, humid climate, and is readily propagated from seed. Seeds thrive best on new ground. They scarcely admit of any covering, but if simply pressed into the ground with the feet they will grow. When one year old transplant into nursery rows. When two or three feet high set out the young trees where they are to remain.

BOX ELDER, OR ASH LEAVED MAPLE (*Acer negundo*).—This seems to succeed as well as any in the Northwest. The trees are said to reach a diameter of seven inches in six years, and to be exceedingly hardy not only to resist cold but drought and dry winds, and suffering less from insects than any other. One of the most desirable sorts for planting on timber claims.

HARDY CATALPA (*Catalpa speciosa*).—Scarcely a tree on our list can be so strongly recommended as this for planting on the treeless prairies of our Western States. It is of quick growth, has proven itself hardy as far north as Dakota, and is one of the most durable timbers known.

Catalpa seeds can be sown dry on a still day, but the better way is to wet the seeds for a few hours before planting, and mix them with a little sifted soil to prevent their sticking together. They will germinate more promptly for the soaking they have received, and will not be so likely to be blown away while being sown. Sow in April or May, in well prepared loamy soil, in rows four feet apart, sowing seed thickly in the rows, covering half an inch deep and firming the soil well over the seeds. Thick sowing is desirable, as a dozen little plants together can force their way through the surface easier than singly, and if they are too thick they can be thinned and transplanted on a damp day as easily as cabbage plants. Cultivate well during the summer, keeping them free from weeds. In the fall or following spring the seedlings can be transplanted where they are to remain. They should be cultivated about like corn for two seasons. There are from 16,000 to 20,000 seeds to the pound.

EUROPEAN LARCH (*Larix Europæa*).—Grows to a large size and makes excellent timber. Seeds should be sown in a half shady situation.

EUROPEAN LINDEN (*Tilia Europæa*).—A great favorite for ornamental planting in Europe. Its wood is very white, light, not liable to crack, and much prized for cabinet work, and the panels of carriages. It should be planted by all bee keepers, as no flower of its size yields better honey or in greater abundance.

HONEY LOCUST (*Gleditsia triacanthos*).—On account of its rapidity of growth and durability of the timber, we regard this as one of the most valuable of our native trees. It is not so liable to injury by the borer as the common Locust, and does not sprout from the root to a greater extent than do most of our forest trees. Without the preparation recommended above, the seeds may lie from one to three years in the ground without sprouting. Take up and heel in or cover the plants in the fall, and set out the next spring. After the first season, they are perfectly hardy. One pound contains about 2,300 seeds.

YELLOW LOCUST (*Robinia pseudo-acacia*).—This tree grows so rapidly that railroad ties may be cut from its ten years from the planting of the seed, while the durability of its timber is well known, fence posts of it having stood for sixty years. Culture same as the above. One ounce contains about 1,300 seeds.

WHITE MULBERRY (*Morus alba*).—Desirable for feeding silk worms. Grows readily and rapidly from seeds, which should not be covered too deep, as they are quite small. It delights in a warm, dry soil, and will succeed in almost any place that will produce a good corn crop.

RUSSIAN MULBERRY.—Of rapid growth, resembling the apple tree in habit, with a grayish bark and drooping branches. It is very easily cultivated and kept in dwarf form, makes a fine hedge and wind break. It bears very young, and the fruit is similar to the blackberry, varying in flavor from sub-acid to sweet. In cold regions especially, this should prove a very valuable variety for its timber, shade and fruit.

OSAGE ORANGE (*Maclura aurantiaca*).—How to PLANT, CULTIVATE AND MAKE A HEDGE.—The ground should be thoroughly pulverized by either plowing or spading, before the seed is planted. The surest way is to sprout the seed before planting, as it is very slow to germinate when put into the ground without being sprouted, sometimes taking a whole season to come up. To sprout the seed put into a vessel and cover with warm (*not hot*) water. Keep the vessel in a warm place, and change the water once a day. Let the seed soak about five or six days, after which pour off the water and cover the vessel with a cloth. Keep in a warm room and stir the seed occasionally. In about one week more they will begin to sprout, and are ready for planting. A pound of seed, if properly managed, will produce 5,000 plants. The seed should be sown in April or May, with twelve good seeds to the foot, in drills twenty inches apart. They should be kept free from weeds, as the young plants are very tender and delicate until they are from three to five inches high. They can be set out in permanent hedges the following spring, in rows, placing them six inches apart in the row, but should be cut back to within an inch of the ground before they are set out; and to make a thick hedge it will be necessary to cut back the first three years, leaving only about eight inches of each season's growth. This system must be pursued every season until the hedge is of the desired height and form. Under proper treatment a good hedge that will turn all kinds of stock can be grown from seed in from three to four years.

CLOVER SEED.

MAMMOTH, OR LARGE RED (*Trifolium pratense*).—It grows five or six feet high, but its stalks are so coarse and large that stock will eat only the leaves, but by its judicious use lands which have been exhausted can be reclaimed, as it will grow where the common clover will fail. Sow at the rate of about eight pounds per acre. Sixty pounds per bushel.

MEDIUM RED, OR JUNE (*Trifolium pratense*).—This is by far the most important of all the varieties for the practical purposes of agriculture. Sow in spring or fall; and when no other grasses are used, at the rate of eight to ten pounds per acre, more being required on old, stiff soils than on new and lighter ones. Sixty pounds per bushel.

CRIMSON TREFLOIL, OR SCARLET ITALIAN.

CRIMSON TREFLOIL, OR SCARLET ITALIAN (*Trifolium incarnatum*).—This is an annual variety, in common use in the South for feeding green. The yield in fodder is immense, and, after cutting, it at once commences growing again, and continues until severe, cold, freezing weather. It grows about one foot high; the roots are nearly black; leaves

long; blossoms long, pointed and of a very deep red, or carmine color. Makes good hay. Sow in April or May, eight pounds of seed per acre.

ALSIKE, OR SWEDISH (*Trifolium hybridum*).—The most hardy of all the clovers; perennial. On rich, moist soils it yields an enormous quantity of hay or pasturage, but its greatest value is for sowing with other clovers and grasses, as it forms a thick bottom and greatly increases the yield of hay, and cattle prefer it to any other forage. The heads are globular, fragrant, and much liked by bees, which obtain a large amount of honey from them. Sow in spring or fall, at the rate of six pounds per acre, where used alone. Sixty pounds per bushel.

WHITE DUTCH (*Trifolium repens*).—A small, creeping, perennial variety, valuable for pasturage and for lawns. It accommodates itself to a variety of soils, but prefers moist ground. Sow in spring, at the rate of six pounds per acre; or when used with other grasses, half that amount.

LUCERNE, OR ALFALEA (*Medicago sativa*).—Where this succeeds, it is the most valuable of all the clovers. It is more difficult to secure a good stand, as it requires a very fine, mellow soil, and some protection the first year, but when once established it will produce a profitable crop for from five to twelve years. In the driest and most sultry weather, when every blade of grass withers, Lucerne is as fresh and green as in spring, because the roots go down to the moisture in the ground.

BOKHARA (*Melilotus alba*) *Sweet Clover*.—This is exceedingly valuable as pasturage for bees. It is occasionally found growing wild by the roadside in company with the more common sweet clover (*Melilotus officinalis*), and may be distinguished from it by its white flowers and less coarse and more leafy stems.

GRASS SEEDS.

TIMOTHY (*Phleum pratense*).—This is the most valuable of all the grasses for hay, especially in the North. Thrives best on moist, loamy soils of medium tenacity. It should be cut just when the blossom falls. Sow early in spring or fall, at the rate of twelve pounds per acre, if alone, but less if mixed with other grasses. Forty-five pounds per bushel.

ORCHARD GRASS, OR COCK'S FOOT (*Dactylis glomerata*).—One of the most valuable grasses on account of its quick growth and valuable aftermath. It is ready for grazing in spring two weeks sooner than most grasses, and will continue green when other grasses are withered by dry weather. It has a tendency to grow in tufts, and so does better if sown with clovers, and as it ripens at the same time the mixed hay is of the best quality. When sown alone, two bushels are required per acre; if sown with clover, half that amount. It is perennial, and will last for years, but its habit of growth unfits it for lawns. Fourteen pounds per bushel.

RED TOP (*Agrostis vulgaris*).—In some sections this is called **RHODE ISLAND BENT GRASS**. In Pennsylvania and states farther south it is known as **HERD'S GRASS**, a name applied in New England and New York to Timothy. It is a good, permanent grass, standing our climate well, and makes a good pasture when fed close. It is valuable for low, wet meadows, not being injured by somewhat prolonged overflows. When sown alone, two bushels per acre are required, sown in spring or fall. Fourteen pounds per bushel.

FOWL MEADOW, OR FALSE RED TOP (*Poa serotina*).—It yields well when sown on low, moist land, and will not suffer if not cut at the exact time. It can be mowed almost any time from July to October. When three feet high it falls down, or lodges, and after a little time every joint puts forth new branches. The stalk is always sweet and tender, and cattle and sheep are fond of it. It thrives best when mixed with other grasses. Though resembling Red Top in some respects, it is distinct, and we think superior in every respect. Requires about the same amount of seed per acre as Red Top, sown in spring or fall. Twelve pounds per bushel.

KENTUCKY BLUE GRASS (*Poa pratensis*).—This is known in some sections as **GREEN MEADOW GRASS**, and **JUNE GRASS**, but should not be confounded with *Poa compressa*, called by some **JUNE GRASS**, or **WIRE GRASS**. This species produces the most nourishing food for cattle of any, and till a late period in winter, and in the South abundant food throughout the winter. In conjunction with white clover, it forms the finest and closest of lawns; for this purpose an extra quantity of seed should be used, say four bushels of Blue Grass and six pounds of White Clover per acre. If sown by itself for pasturage, two bushels will be required; sown early in the spring, or in October or November. Fourteen pounds per bushel.

PERENNIAL RYE GRASS (*Lolium perenne*).—A very valuable variety for permanent pasture; very nutritious, and stock are very fond of it. Succeeds well on almost any soil, but is particularly adapted to moderately moist or irrigated lands. Large quantities are raised in England, and

nearly all of Europe. It is also largely used for lawns, in conjunction with other grasses. Sow one and a-half to two bushels per acre, in the spring. Twenty pounds per bushel.

MEADOW FESCUE, OR ENGLISH BLUE GRASS (*Festuca pratensis*).—A perennial grass from two to four feet high, with flat, broad leaves. This is one of the standard European grasses, and cattle are very fond of it, both green and dry. It needs rich ground, and it succeeds well on prairie soil, and is an excellent pasture grass to take the place of the wild grasses, as it yields a large amount of early and late feed.

SWEET VERNAL GRASS (*Anthoxanthum odoratum*).—One of the earliest of grasses in spring, as well as the latest in autumn, and about the only grass that is fragrant. As a pasture grass, mixed with other species, it is valuable on account of its earliness, and mixed with blue grass and white clover, it is an invaluable adjunct for lawns, presenting a beautiful appearance, and exhaling a delightful fragrance when in blossom. Should form a part of the mixed grasses in every lawn and dooryard. About ten pounds per bushel.

WOOD MEADOW GRASS (*Poa nemoralis*).—Grows from one and a-half to two feet high; has a perennial creeping root, and an erect, slender, smooth stem. Its chief value is in that it will produce a good crop of hay in moist, shady situations, where it frequently grows quite tall. Cattle are fond of it; it is succulent and nutritious, and is, perhaps, the best variety for sowing in orchards, under trees, and shaded situations, either for hay or pasturage, and for parks and pleasure grounds. About fourteen pounds per bushel. Two bushels per acre.

COMMON MILLET (*Panicum miliaceum*).—Requires a dry, light, rich soil, and grows two and a-half to four feet high, with a fine bulk of stalks and leaves and is excellent for forage. For hay, sow broadcast, one-half bushel per acre, from May 1st to August 1st. For grain, sow in drills, one peck to the acre, and not later than June 20th. Fifty pounds per bushel.

GERMAN, OR GOLDEN MILLET.—An improved variety, medium early, growing three to five feet high. The heads are closely condensed, though the spikes are very numerous. The seeds are contained in rough, bristly sheaths, and are round, golden yellow, and beautiful in appearance.

HUNGARIAN GRASS (*Panicum Germanicum*).—This is a species of millet, growing less rank, with smaller stalks, often yielding two or three tons of hay per acre. It is very popular and valuable with those who are clearing timber lands. Like the millet, it is an annual, and requires to be sown every season, but will produce a larger return than almost any other crop. Sow and cultivate like millet. Forty-eight pounds per bushel.

JOHNSON GRASS (*Sorghum halapense*).—This is a valuable forage plant and is popular in the Southern States. It is perennial, a rapid grower, very nutritious; comes early in the spring, grows until the frosts cut it down in the fall, stands the drought better than any grass, having long, cane like roots which penetrate the soil for moisture. The best results follow sowing the seed in August and September, enabling the seed to get a good root by fall, and forming a better turf the following season. Sow with clean seed, broadcast, at the rate of one bushel per acre, and cover with a light brush, or sow just before a heavy rain. Three good crops the following season will be the result if the season is favorable. Sowing in the spring does well, but the crop would not be as heavy the first year.

EXTRA FINE MIXED LAWN GRASS (*Central Park Mixture*).—The essentials for a fine lawn are proper drainage, a careful preparation of the soil, which should be made as fine and light on the surface as possible, thorough rolling, and a selection of the seeds of such grasses as will present a luxuriant verdure from early spring till late in autumn; and then, frequent mowings with a lawn mower. However much care is bestowed on the soil and seed, no lawn will be beautiful without frequent mowing and rolling. Too much care cannot be bestowed upon the selection of grasses, as some varieties are the most luxuriant in spring, others in summer, others again in autumn, and a combination of the proper sorts is required for a perfect, carpet like lawn. We have given much thought and made many experiments to secure the best selection, and think our Central Park Mixture is the best possible for permanent lawns. It may be planted early in spring, or fall, and should be sown at the rate of from sixty to eighty pounds to the acre, much more being required than for hay or pasturage. If sown in the spring, sow as early as possible, making the surface very fine and smooth, then raking it over and sowing the seed just before a rain, which, if the surface has just been raked, will cover the seed sufficiently. If the expected rain does not come, cover by rolling with a light roller. If sown in the fall, sow before the autumn rains have ceased, and before very cold weather give the young grass a light dressing of manure. One pound of this mixture is sufficient to sow a space 30x20 feet, or 600 square feet. Kentucky Blue Grass in conjunction with White Clover, forms one of the finest and closest of lawns. For this purpose, use four bushels of Blue Grass and about six pounds of White Clover per acre.

WHEAT, RYE, ETC.

MICHIGAN WINTER WHEAT.

MICHIGAN BRONZE (*Mediterranean Hybrid, or Diehl Mediterranean*).—This is a cross between the old Diehl and the Red Mediterranean, and the head is of the shape of the Diehl, but with short beards, while the plant retains the hardness and productiveness of the Mediterranean, and the grain is very superior in milling qualities. The plants stood out well. The straw is of moderate length and size, but very stiff, and turns bronze at maturity; the berry is bright amber color, medium sized and handsome. We recommend this variety as one of the surest and best for ordinary farms and conditions.

BARLEY, COMMON.—Barley succeeds best on lands more sandy and lighter than those adapted to wheat. It is sown in the spring, and can be grown farther north than any other grain. Sow from two to two and a-half bushels per acre. Weight, forty-eight pounds per bushel.

BARLEY, HULLES.—There are several varieties of barley in which the grain shells out of the chaff like wheat. One variety is also beardless. That we offer has a smaller grain, but yields about as well as the Common Barley, and is the sort largely grown by Bohemians and others for making barley bread.

RYE, FALL OR WINTER.—The time for sowing is from the middle of August to the last of September. Prepare the ground as for wheat and sow either broadcast, or with a drill at the rate of one and one-half bushels per acre. As a crop to be used for late fall and early spring pasture this has no equal, and it is one of the best to turn under for green manure.

RYE, SPRING.—Although this grain is often planted by farmers especially for the paper makers, who prefer it to any other, its principal value is as a "catch" crop, to sow where winter grain has failed. The straw is shorter and stiffer than that of the winter variety, and is always easily secured, while the grain, although smaller, is of equal value.

BUCKWHEAT, COMMON.—Buckwheat should be sown about the 20th of June, broadcast, at the rate of from one to three pecks per acre. The average yield is from twenty-five to thirty bushels per acre. It should be threshed as soon as dry, on the ground or barn floor. If allowed to stand in mass, it quickly gathers moisture.

BUCKWHEAT, JAPANESE.—It is rarely that a new grain is introduced which has so decided and evident merit as this. The plants are very large and vigorous and it matures its seed early, while the grain is much larger and at the same time has a thinner hull than the Common or the Silver Hull. We recommend this especially for well drained or sandy land.

BUCKWHEAT, SILVER HULL.—This improved variety is much better than the old sort. It is in bloom longer, matures sooner, and yields double the quantity per acre. The husk is thinner, the corners less prominent, and the grain of a beautiful light gray color.

FIELD PEAS (*Pisum sativum*).—The varieties of field peas have never been very numerous, nor are they much increasing. The kinds mostly used are the Golden Vine, Blue Prussian, Common White and Common Blue. Field peas, in general, may be sown broadcast or in drills, after the manner of field beans, about three bushels per acre.

SPRING VETCHES, OR TARES (*Vicia sativa*).—A species of the pea, grown extensively in England, and to a considerable extent in Canada, for stock, but not much used in the States. Culture same as field peas, two bushels per acre.

FLAX (*Linum usitatissimum*).—Sow late enough in the spring to avoid frost, and early enough to secure the early rains. A fair average quantity of seed to be sown on an acre is one-half bushel, when cultivated for seed; if for the fibre a larger quantity should be sown. Cut before quite ripe, and, if the weather be dry, let it lie in the swath a few hours, when it should be raked and secured from the weather; thresh early in the fall and in dry weather.

HEMP (*Cannabis sativa*).—If raised for manufacturing, must be sown broadcast, at the rate of one-half bushel to the acre; if for seed, should be planted in hills four feet apart, and the plants thinned out to three or four most vigorous stems in each hill.

BIRD SEEDS.

CANARY SEED (*Phalaris canariensis*).
HEMP SEED (*Cannabis sativa*).
MAW (*Papaver rhoeas*).
MILLET SEED (*Panicum miliaceum*).
RAPE SEED (*Brassica napus*).
LETTUCE SEED (*Lactuca sativa*).

A SELECT DESCRIPTIVE LIST

—OF—

CHOICE IMPORTED FLOWER SEEDS.

MANY who do not meet with the success they expected in the culture of a general list of Flowers, attribute the difficulty solely to the seeds, overlooking the important fact that nearly the entire range of Flower Seeds requires careful and particular treatment, and the further fact that the treatment and conditions which with one variety will produce the most satisfactory results, may utterly blight another.

To insure success, the conditions and requirements of the several species as to soil, moisture, heat, light, etc., should be studied and then observed in culture. We feel sure that the pleasure resulting from a large and varied collection of Flowers will amply compensate for the time and care given to the subject.

SELECTION OF VARIETIES.—Success in flower culture depends quite largely upon a judicious selection of varieties. Every sort we offer is, under certain conditions, attractive and desirable, but some of them, while exceedingly beautiful under favorable circumstances, will be most unsatisfactory and little better than weeds under others; we therefore urge our friends to study carefully the following pages before ordering, that they may select the sorts best suited to their wants.

THE SOIL.—Another great object to be considered is the soil in which flower seeds are to be sown. The soil best adapted to flowering plants generally, is a light, friable loam, containing a sufficient amount of sand to render it porous. A great many varieties will live in almost any kind of soil, except it be extremely dry, calcareous, or of a stiff, heavy character; still, to give them a fair chance for development, some little pains should be taken in adding to the soil, as much as possible, what may be wanting in it. Most flowers are better if produced on plants of vigorous growth, so the greater portion of the garden should be prepared by deep digging, thorough pulverization, and liberal enriching with large quantities of well rotted manure. On the other hand, some sorts do best on very poor soil, so a portion of the garden should be left without enriching at all. As the process of germination is shorter or longer in the different kinds of seeds, the patience of the cultivator is often sorely tried with seeds of a slowly germinating character; the patience of a devoted florist, however, is never exhausted in these manipulations, and the certainty of his final success repays him fully for the trouble.

Nine-tenths of the failures in flower culture come from improper treatment of the seeds and young plants, and we urge every purchaser of our seeds to study carefully the cultural directions printed on each package, and keep in mind the following golden rules for sowing flower seeds:

Make the surface as fine and smooth as possible.

Do not plant any of the seeds when the ground is at all wet.

Cover each lot of seeds to a uniform depth, which should never be more than three or four times the diameter of the seeds. Press the soil firmly over the seeds.

Plant in rows so that the young plants can be easily seen, and pull up all weeds which spring up between the rows the day they appear, but do not pull plants out of the row until you are sure they are weeds.

WE OFFER THE FOLLOWING LIBERAL INDUCEMENTS

TO CLUBS, OR THOSE WHO WISH TO PURCHASE FLOWER SEEDS IN QUANTITY.

These Low Rates Apply only to Seeds in Packets, but the Seeds will be Sent by Mail, Post-Paid.

SEND US \$1.00, AND SELECT PACKETS TO THE VALUE OF \$1.15.

SEND US \$2.00, AND SELECT PACKETS TO THE VALUE OF \$2.35.

SEND US \$3.00, AND SELECT PACKETS TO THE VALUE OF \$3.60.

SEND US \$5.00, AND SELECT PACKETS TO THE VALUE OF \$6.15.

SEND US \$10.00, AND SELECT PACKETS TO THE VALUE OF 12.50.

SEND US \$20.00, AND SELECT PACKETS TO THE VALUE OF \$26.00.

All Flower Seeds Sent Free by Mail on Receipt of Price.

THE FIGURES AT THE RIGHT OPPOSITE EACH VARIETY DENOTE THE PRICE, IN CENTS, PER PACKET.

ABOBRA.

A rapid growing, climbing, half hardy, tuberous rooted perennial gourd, whose dark green foliage and bright scarlet fruit form a striking contrast. Height fifteen feet.

Abobra viridiflora.....10

ABRONIA.

A charming trailer with fragrant verbena like flowers, in bloom the entire summer. Half hardy annual.

Abronia umbellata, delicate lilac, white centre.....10

" arenaria, waxy yellow, fragrant.....10

" mixed, above mixed.....10

ABUTILON—(Flowering Maple).

Very popular, perennial, green-house shrub, with bell shaped, drooping flowers, which vary in color from pure white and yellow to deep orange and crimson streaked with yellow, and are borne in great profusion the entire year. Well adapted for house culture and for bedding out doors.

Abutilon, finest mixed.....25

ACROCLINIUM—(Everlasting).

Very pretty, half-hardy annual, with rose and white daisy like flowers. These are "Immortelles" which bloom in August and September, and are fine for winter bouquets and wreaths. Height one foot.

Acroclinium album, pure white..... 5

" roseum, light rose..... 5

" " double.....10

" mixed..... 5

ACROCLINIUM ROSEUM.

ADLUMIA.

This is sometimes known as Mountain Fringe, Wood Fringe and Alleghany Vine. A beautiful and graceful climber and profuse bloomer. Hardy biennial; height fifteen feet.

Adlumia cirrhosa, white and pink..... 10

ADONIS FLOWER—(Pheasant's Eye).

Foliage pretty, delicate, many parted. Hardy annual; one foot high.

Adonis autumnalis, dark blood red, fine..... 5

AGAPANTHUS—(African Lily).

Bears large heads of beautiful blue flowers on stems three feet high; will flower in two years from seed; one-half hardy perennial.

AGAPANTHUS UMBELLATUS.

Agapanthus Umbellatus.....15

AGERATUM.

Very profuse and constant bloomers; excellent for cut flowers and in borders. Hardy annual, easily grown.

AGERATUM MEXICANUM.

Ageratum Mexicanum, light blue..... 5
 " *Imperial Dwarf White*..... 5
 " *Tom Thumb*, dwarf blue, desirable for edging.... 5
 " *Lasseauxi*, rose colored.....10
 " *conspicuum*, valuable for winter; white..... 5
 " mixed, seeds of the above varieties mixed..... 5

AGROSTEMMA.

Very useful for cutting for bouquets, and pretty in masses in beds. The annual variety is known as Rose of Heaven;

AGROSTEMMA CÆLI-ROSA.

the perennial as Rose Campion. One and a-half feet high; hardy.

Agrostemma coronaria, crimson; perennial..... 5
 " *cæli-rosa*, rose, white centre; annual..... 5

AGROSTIS—(Ornamental Grass).

Much used in connection with everlastings, for winter bouquets. Grows easily in any common garden soil. Hardy annual; about one and a-half feet high.

Agrostis nebulosa, fine and delicate.....10
 " *Pulchella*, exceedingly graceful.....10

ALONSOA.

Properly green-house plants, but bloom finely in open ground when treated as tender annuals. Flowers remarkably brilliant; height one and one-half feet.

Alonsoa grandiflora, deep scarlet..... 5
 " *Warszewiczii*, bright crimson..... 5
 " mixed, seeds of the above varieties mixed..... 5

ALYSSUM.

Alyssum, sweet (*maritimum*), flowers pure white in racemes, and of a peculiar, delicate fragrance. Useful in all kinds of small bouquets. Hardy annual; grows one foot high..... 5

ALYSSUM MARITIMUM.

Alyssum golden (*saxatile*), flowers golden yellow; desirable for rock work, and showy in masses. Hardy perennial; height one foot..... 5

AMARANTHUS.

Valuable for its variety of handsome foliage, whether grown in the conservatory or garden.

AMARANTHUS MELANCHOLICUS RUBER.

Amaranthus melancholicus ruber, blood red foliage. Hardy annual; two and a-half feet high..... 5
 " *tricolor*, leaves yellow, red and green; well known as "Joseph's Coat." Hardy annual; two feet high... 5
 " *salicifolius*, two and a-half to three feet high. Leaves beautifully undulated, varying from green to bronze and later to a bright orange red.....10
 " *Henderi*, drooping foliage, richly colored in many shades.....10

AMMOBIUM—(Everlasting).

Valuable for winter bouquets in connection with grasses and other everlastings. Hardy annual; height two feet.

Ammobium alatum, pure white..... 5

AMPELOPSIS.

These are deservedly among the most popular vines grown for covering walls, arbors, etc. Hardy perennial climbers.

- Ampelopsis quinquefolia, Virginia Creeper, or American Woodbine.....10
- " Veitchii, Japan Ivy, or Boston Ivy, leaves three parted; will cling to the smoothest wall.....15

ANAGALLIS.

Interesting plants of easy culture, and remarkable for the beauty of their flowers. Well adapted to rock work or borders. Half-hardy annual; six inches high.

ANAGALLIS.

- Anagallis, mixed.....10

ANCHUSA.

Perfectly hardy, handsome herbaceous, biennials or perennials. Should be planted in every garden.

Anchusa Italica, beautiful dark blue flowers, should be planted with Columbines, Larkspurs, etc. Perennial; two feet high..... 5

" **Capensis**. This is the Anchusa so much sought after by bees, and should be grown for bee pasture. Hardy biennial, but blooms the first year, if sown early.....10

ANEMONE—(Wind Flower).

Among the earliest and brightest of spring flowers. The colors run through several shades. Hardy perennial.

ANEMONE.

- Anemone coronaria, six inches high.....10

ANTIRRHINUM.—(See Snapdragon).

AQUILEGIA.—(See Columbine).

ARABIS.

Among the earliest blooming plants, and very useful for

rock work, edgings, etc. Culture same as for Anemone. Hardy perennial; nine inches high.

- Arabis Alpina, pure white.....10

ARISTOLOCHIA—(Dutchman's Pipe).

A beautiful and rapid climber, with heart shaped leaves and singular, siphon shaped purple flowers. Very effective for Verandas. Hardy perennial; thirty feet high.

- Aristolochia siphon.....10

ARMERIA—(Thrift, or Sea Pink).

These handsome plants are well adapted for ornamenting rock work, and edging walks. May also be grown in pots. Hardy perennial; six inches high.

- Armeria maritima, pink..... 5

ASPERULA.

A profuse blooming, dwarf, hardy annual, with sweet scented, lavender blue flowers; height one foot.

- Asperula azurea setosa..... 5

ASTER.

These old, reliable and universal favorites have been so wonderfully improved of late years that now they may be had in almost endless variety of size, form and color. They are all hardy annuals and are all equally easily grown.

Aster, Queen of the Market, this is a new class of Asters and the earliest of all; very floriferous and has a wide range of colors. Especially adapted to the cut flower trade. *Finest mixed*.....15

" **Comet**, this new and distinct class of Asters resembles very much the Japan Chrysanthemum in size and shape of flowers. They have a wide range of handsome colors and are extremely floriferous. *Finest mixture of all colors*.....25

" **Shakespeare, mixed**, plants form compact bushes, ten to twelve inches in diameter, and six inches high. Extremely handsome; very double. *All colors mixed*.....20

" **dwarf Bouquet**, (*Bolta*), very constant in height and habit of plant, which is of valuable quality. *Splendid mixed*; height eight inches.....10

ASTER, DWARF CHRYSANTHEMUM.

Aster, dwarf Chrysanthemum, flowers large, three to four inches in diameter, later than the above; height ten inches. *All colors mixed*.....15

" **dwarf Victoria**, like tall Victoria in habit. Of great utility for edgings and pot culture. Height twelve inches. *All colors mixed*.....10

ASTER, IMBRICATED POMPON.

- Aster, Pyramidal Bouquet**, dwarf, forming a complete pyramidal shaped bouquet, carrying from fifteen to twenty flowers, and completely hiding the foliage; height one foot. *A fine range of colors mixed*. 10
- " **Triumph**, deep scarlet, one of the finest dwarf asters yet produced; height one foot. 15
- " **Diamond**, has large double flowers of rich and varied colors. One of the best for cut flowers; eighteen inches high. *All colors mixed*. 25
- " **Rose**, large flowered, flowers double, oval, resembling a double rose in shape; colors very brilliant; height eighteen inches. *All colors mixed*. 15
- " **Imbricated Pompon**, flowers of perfect form and so double as to appear spherical; height eighteen inches. *All colors mixed*. 10
- " **German, Quilled**, flowers large, freely produced and of brilliant colors; height eighteen inches. *Mixed all colors*. 5
- " **Lilliput**, characterized by the diminutive size and abundance of the flowers; fine for cut flowers; height one and one-half feet. *All colors mixed*. 10
- " **Truffaut's Perfection**, peony flowered; seed saved from the most perfect of this magnificent strain; height eighteen inches. 5
- " **Truffaut's Perfection**, snow white. 15
- " " " light blue. 15
- " " " crimson. 15
- " " " mixed, a fine range of colors. 15

ASTER, PEONY FLOWERED.

- Aster, Peony Flowered**, flowers four to five inches in diameter; height two feet. *Mixed, many colors*. 10
- " **Victoria**, a splendid race of Asters; flowers large, globular, very double; height two feet. 15
- " **Victoria, white**, turning to azure blue. 15
- " " peach blossom. 15
- " " violet. 15
- " " mixed, including all colors. 10

ASTER, COCARDEAU, OR CROWN.

- Aster, Cocardeau, or Crown**, an excellent variety; flowers white centered surrounded with many bright colors; height two feet. *Mixed all colors*. 10
- " **Reid's Improved Quilled**, remarkable for its tubular petals, resembling quills; height about two feet. *All colors mixed*. 10
- " **Goliath, Mont Rose**, splendid variety; flowers a charming peach color; plants large, branching. 20
- " **Goliath, Mont Blanc**, similar to Mont Rose, except with white flowers. 20
- " **Goliath, crimson**, valuable for florists. 25
- " **Giant Emperor**, snow white; flowers very double, and of enormous size; height two feet. 10

Aster, Washington, flowers the largest of any of the Asters, often four to six inches in diameter; plants two feet high. *Mixed colors*. 20

ASTER, GOLIATH.

AURICULA—(Primula).

Called also Primula Auricula and French Cowslip. This is an old and well known favorite. Culture same as for Primrose. Tender perennial; height six inches.

- Auricula, Alpine**, the most hardy variety. 15
- " **finest prize**, mixture of all the choicest varieties. 20

AURICULA.

AZALEA.

Spring flowering shrubs, universally admired for their beautiful flowers, which are produced in great profusion.

- Azalea indica**, green-house evergreen shrub. Very handsome. *Finest mixed*. 25

BACHELOR'S BUTTON.

Under cultivation this is really a handsome flower, sporting into varieties of white, purple, pink, parti-colored, etc. Hardy annual; two to three feet high.

- Bachelor's Button, Centaurea cyanus**, mixed. 5

BALLOON VINE—(Cardiospermum).

Remarkable for its inflated membranous capsules; sometimes called Love-in-a-Puff. A rapid and graceful climber. Tender annual; six feet high.

- Cardiospermum halicacabum**, white; from India. 10

BALSAM—(Impatiens).

Known as Lady Slipper and Touch-Me-Not. Balsams have been so greatly improved by cultivation that with proper treatment and good seed a single flower is the exception now rather than the rule. Hardy annual; one to two feet high.

- Balsam, double Solferino**, satiny white, streaked and spotted with crimson and lilac. *Very choice*. 10
- " **double Camellia**, as double as a Camellia, which they resemble; white, blotched with various colors. 10
- " **mixed, double rose**, has perfectly double, rose like blossoms of almost every shade and color. 10
- " **double dark red**, (*atrosanguinea plenissima*), a very double, dark red variety, highly recommended. 10
- " **double pure white**, well adapted for florists, for bouquets; very double. 20
- " **mixed, double dwarf**, about one foot high. 5
- " **double, tall**, grows about two feet high. 5

BAPTISIA—(False Indigo).

Ornamental border plants producing bright blue, pea shaped flowers, borne on spikes six inches long. Hardy herbaceous perennial; three feet high.

- Baptisia Australis**, blue. 10

BARTONIA.

A pretty flowering plant of the Gentian family, pro-

ducing a profusion of fine, bright metallic yellow blossoms about two inches across. Tender annual; one foot high.

Bartonia aurea, golden yellow..... 5

BEGONIA.

The tuberous rooted Begonia is equally charming as a house plant or for bedding out doors in a cool, partially shaded place. They bloom profusely in three or four months from sowing the seed, and continue until cut off by frost. Store roots in a dry cellar. Tender perennial.

BEGONIA, SINGLE.

Begonia, Tuberous Rooted varieties, mixed. These mixtures are the results of the fecundation of the most beautiful varieties. They include the handsomest shades of colors and the individual florets average from two to five inches in diameter.

Single mixed, very choicest.....25
Double " " " ".....50

BEGONIA, DOUBLE.

Begonia robusta perfecta, of robust, compact habit, dark green foliage and brilliant double cinnabar scarlet flowers.....50

- Begonia semperflorens alba*. A very useful variety well adapted to home or out door culture. Plants of compact dwarf habit and are, under proper treatment, almost continuous bloomers. Easily grown; flowers pure white.....25
- " *semperflorens rosea*, like the above, except flowers are rose colored.....25
- " *Vernon (semperflorens atropurpurea)*. Flowers brilliant rich red, which are set off perfectly by the abundant glossy green leaves broadly margined with bronze and purple. Extremely hardy and floriferous, the best of the *semperflorens* class; new.....50
- " *Rex*, ornamental leaved varieties, finest mixed.....25

BELVIDERE—(Summer Cypress).

An ornamental, cypress like plant with inconspicuous, green flowers, nearly hidden by the foliage. It is well adapted for growing in cemeteries. Hardy annual.

Belvidere (Chenopodium scoparium)..... 5

BIGNONIA—(Trumpet Vine).

Well known, perhaps the most showy, and is one of the best hardy, deciduous climbers for covering verandas, arbors, trunks of trees, old walls, etc. Flowers brilliant scarlet, trumpet shaped; hardy perennial.

Bignonia radicans..... 10

BOCCONIA.

Stately ornamental foliaged plants, well adapted for lawns, either singly or in groups. Hardy, herbaceous, perennial.

Bocconia Japonica, four to six feet high; splendid foliage; flowers in clusters and pure white.....10

BRACHYCOME—(Swan River Daisy).

Effective in edgings, beds, or rustic baskets. Half hardy annual; one-half foot high, free flowering.

Brachycome, mixed blue and white..... 10

BRIZA—(Ornamental Grass).

Very useful ornamental grass, much sought for in forming winter bouquets and wreaths; one foot high.

Briza Maxima, large; attractive..... 5
" *gracilis*, slender; dwarf..... 5

BROWALLIA.

These handsome, profuse bloomers are used freely both for indoor and outdoor planting, on account of the ease with which they may be grown and their usefulness for cut flowers. Half hardy annual: height eighteen inches.

BROWALLIA.

Browallia Roezli, produces white and blue flowers.....15
" *elata*, fine mixed.....10

BRYONOPSIS.

An ornamental climber of the gourd family, bearing green fruits, which change in color as the season advances, to bright scarlet striped with white. Tender annual.

Bryonopsis laciniosa erythrocarpa, ten feet high..... 5

CACALIA.—(See Tassel Flower.)

CALANDRINIA.

Fine dwarf plants for growing in masses; produce an abundance of blossoms; well suited for edgings, rockeries, etc. Tender annual; one-half to one foot high.

Calandrinia grandiflora, rosy lilac..... 5
" *umbellata*, crimson..... 5

CALAMPELIS.

A beautiful, tender climber from Chili, with delicate foliage, and bright orange blossoms in racemes, freely produced late in the season. Tender perennial; fifteen feet high.

Calampelis (Eccremocarpus) scaber.....10

CALCEOLARIA.

A favorite and universally admired genus, remarkable for their large, beautifully spotted blossoms. An almost countless number of hybrids have been raised. They are grown in pots in the conservatory, green-house and garden. Herbaceous or shrubby evergreen perennials.

CALCEOLARIA

- Calceolaria hybrida grandiflora*, flowers of immense size; seed saved from finest specimens.....25
- " *hybrida tigrina*, flowers of the largest size, beautifully spotted. Seed saved from *choicest collection*. 25
- " *hybrida pumila compacta tigrina*, dwarf variety, ten inches high. Flowers of *fine form and beautiful color*.25
- " *finest hybrids mixed*, seed saved only from the *most perfect flowers*, embracing many of recent introduction; all desirable.....25
- " *rugosa*, shrubby; grown in and out of doors. Saved from the *finest varieties, mixed*.....25

CALENDULA.—(See Marigold.)

CALIFORNIA POPPY.—(See Eschscholtzia.)

CALLA—(Ethiopian Lily).

An old and very desirable plant, either as an aquatic or as an ornament for the drawing room and conservatory. Will flower in one year from planting of the seed.

Calla Æthiopica, half hardy perennial.....25

CALLIOPSIS, or COREOPSIS.

A very showy border plant, producing flowers in nearly every shade of yellow, orange, crimson, red and brown. Hardy annual; two feet high.

Calliopsis, fine mixed..... 5

CALLIRHOE—(Poppy Mallow).

Extremely handsome border plants, bearing large, rich, violet-purple flowers in great profusion throughout the season. Hardy annual; one to two feet high.

CALLIRHOE PEDATA.

- Callirhoe involucrata*, trailing; purplish-crimson..... 5
- " *pedata*, purple, white eye..... 5
- " *nana*, dwarf; one foot..... 5

CAMELLIA.

All species of Camellias are universally admired on account of their beautiful, rose like flowers, and elegant dark green, shining, laurel like leaves. They are hardy green-house shrubs of easy culture.

Camellia Japonica, fine double mixed, seed saved from the finest double varieties, and will undoubtedly produce some valuable kinds.....25

CANARY BIRD FLOWER.

(*Tropaeolum peregrinum.*)

A beautiful climber, the charming little canary colored blossoms bearing a fancied resemblance to a bird with its wings half expanded. The plant has a luxuriant, rambling character, and if the seeds are planted by the side of an arbor or trellis, will run twenty feet and blossom from July till frost comes. Tender annual.

Canary Bird Flower.....10

CANDYTUFT—(Iberis).

Universally known and cultivated, and considered indispensable for cutting. All the varieties look best in beds or masses. Hardy annual; one foot high.

- Candytuft, purple*..... 5
- " *white*..... 5
- " *Rocket (Empress)*, white, extra large..... 5

CANDYTUFT, ROCKET.

- Candytuft, fragrant, white*..... 5
- " *crimson, fine*..... 5
- " *carmine, of dwarf, compact habit*.....10
- " *fine mixed*..... 5
- " *dwarf mixed hybrid, four to six inches high*.....10
- " *perennial (Sempervirens)*.....10

CANDYTUFT, PERENNIAL.

CANNA.

Stately and ornamental plants, very desirable for bedding out doors, while the dwarf varieties are now much used for forcing under glass for the flowers. Tender perennial; two to six feet high. Store roots in cellar in winter.

- Canna Indica (Indian Shot)*, scarlet blossoms.....10
- " *nigricans*, orange blossoms.....15

Canna, Warszewiczii, bright red flowers; striped foliage; very beautiful.10
 " **Crozy's Hybrids**, nothing can exceed the beauty and variety of color of these magnificent bedding or green-house plants. Started in heat in February they will bloom by August in the greatest profusion. Finest hybrid varieties mixed; three feet high.15

CANTERBURY BELL—(Campanula Medium).

Handsome, hardy biennial, of stately growth, rich color, and profuse bloom. Succeeds best in light, rich soil, and should be transplanted, two feet apart. Has large, bell shaped flowers, which are strikingly effective.

CANTERBURY BELL.

Canterbury Bell, double white.10
 " " " **blue.**10
 " " " **mixed, blue and white.**10
 " " **single mixed.**5
 " " **calycanthea, mixed, flowers large,**
 of fine form, white, lilac, rose and purple.10

CARDIOSPERMUM.—(See Balloon Vine.)

CARNATION and PICOTEE—(Dianthus Caryophyllus).

No flower can surpass in delicacy of marking, form, or delicious fragrance, the rich hued Carnation. It has always been one of the most esteemed of the florist's collection, and there is no flower more desirable for the garden. Half-hardy perennial; one and a-half feet high.

Carnation, Marguerite. This is a grand, new carnation, having all the good qualities of the ordinary varieties and blooming in about four months from sowing the seed. The seed will come about 80 per cent. double flowers; in finest mixture.25
 " **fine double selves, one color.**15
 " " **striped.**20
 " **double dwarf (Vienna), early flowered.**20
 " " **perpetual flowered, seed saved from choicest double flowers.**25
 " **choicest, white ground.**50
 " **Double Grenadin, a splendid variety for florists; very early, charming double scarlet flowers.**25
 " **extra fine mixed double Picotee.**25
 " **extra choice double mixed, seed saved from the choicest French, German, Italian and English stocks.** A large proportion will produce double flowers. Will be appreciated by florists.25
 " **double mixed, good seed, producing many double flowers of all shades and colors.**10

CASTOR BEAN—(Ricinus).

Tall, majestic plants for lawns, with leaves of glossy green, brown or bronzed metallic hue, and long spikes of prickly capsules of scarlet and green. Of very quick growth in rich soil. Tender annual; eight to ten feet high.

Ricinus sanguineus, red fruit, blood red stalks.10
 " **tricolor**, leaves spotted.10
 " **giganteus**, leaves of large size, richly veined and marbled; ten feet high.10
 " **communis major (Palma Christi)**, the common Castor Oil Bean.5
 " **mixed.**10

CATANANCHE.

Flowers white with violet center, and blue with purple center, quite double, somewhat resembling a pink, extremely showy. Hardy perennial; one and a-half to two feet high.

CATANANCHE CŒRULEA.

Catananche cœrulea, blue, purple center.5
 " **bicolor**, white, violet center.5
 " **mixed.**5

CATCHFLY—(Silene).

An easy growing, free flowering plant, producing dense umbels of white, red and rose pink-like blossoms. The plant is covered with a glutinous moisture, from which flies cannot disengage themselves, hence the name Catchfly. After having been once grown, the seed will sow itself in the ground. Hardy annual; one foot high.

Silene armeria alba, white.5
 " " **rubra**, red.5
 " " **rosea**, rose.5
 " " **mixed.**5

CEDRONELLA.

A beautiful, hardy evergreen, perennial plant, having fragrant leaves, and producing long spikes of salvia shaped, crimson blossoms.

Cedronella cana, three feet high.10

CELASTRUS—(Climbing Bitter-Sweet).

Hardy, deciduous climber, producing yellow blossoms early in the season; later, fruit, which is very ornamental and remains on the vines nearly all winter. Twenty feet high.

Celastrus scandens.10

CELOSIA.

Magnificent plants for green-house or conservatory decoration, producing elegant, plume shaped spikes of flowers; look well in vases out of doors. Half-hardy annuals; one to three feet high.

CELOSIA.

Celosia pyramidalis, crimson feathered, crimson spikes, beautiful.10
 " **pyramidalis plumosa, mixed**, beautiful long plumes; pyramidal in form, of red, yellow, violet, etc; very striking.10
 " **eristata** (see Cockscomb).

CENTAUREA—(Dusty Miller).

An exceedingly interesting genus of plants, embracing annuals, biennials and perennials. Some of the varieties are

CENTAUREA CANDIDISSIMA.

foliage plants, indispensable for borders and edges of beds, while others are noted for their beautiful flowers.

- Centaurea gymnocarpa**, silvery gray foliage; drooping habit, very graceful.....15
- " **candidissima**, ornamental plant of great beauty. Silvery white, deeply cut foliage. Half-hardy perennial.....25
- " **Clementi**, foliage white, deeply cut. Half-hardy perennial.....25
- " **Americana**, hardy annual; two feet in height, and of strong, robust growth; flowers purplish-red. 5
- " **cyaneus**, (see Bachelor's Button).
- " **moschata atropurpurea** (see Sweet Sultan).

CENTAUREA AMERICANA.

CHAMÆROPS.—(See Palm).

CHEIRANTHUS.—(See Wall Flower).

CHRYSANTHEMUM.

Chrysanthemums have deservedly become very popular during the last few years. They are showy and effective in the garden, and very desirable for cut flowers. Our list affords a fine range for selection.

The following varieties are hardy annuals one and a-half to two feet high.

- Chrysanthemum carinatum Burridgeanum**, crimson, white center; single..... 5
- " **carinatum "Eclipse,"** pure golden yellow with a bright purplish-scarlet ring or center on the ray florets, the disc being dark brown; very striking...15
- " **coronarium, double white**..... 5
- " " **yellow**..... 5
- " **sulphureum flore pleno**, produces charming double flowers of a delicate lemon or sulphur shade.....10
- " **coronarium, double mixed**..... 5

CHRYSANTHEMUM CORONARIUM.

The following varieties are for pot culture, for blooming in the house in winter, and for florists for cutting for bouquets.

- Chrysanthemum frutescens, Marguerite, or Paris Daisy.**—This variety, under the name of Marguerite, has obtained great popularity among florists. The pretty, star shaped, white flowers are freely produced and the plant will grow under almost any circumstances; perennial.....10
- " **Indicum fl. pl.**, half-hardy perennial, very double; mixed colors.....25

CHRYSANTHEMUM, INDICUM.

- Chrysanthemum Japonicum fl. pl.**, Japanese variety. Flowers of peculiar form, and much beauty, combining numerous shades of color. Half-hardy perennial.....25
- " **superb mixed double**, seed from the finest Chinese and Japanese varieties extant, which we offer in mixture. Those who are on the lookout for new varieties should not fail to secure some of this strain.....25

CINERARIA.

Green-house perennials, which can be planted out in summer. They thrive best in a mixture of loam and peat, and cuttings root freely under glass. One to three feet high.

CINERARIA HYBRIDA.

- Cineraria maritima candidissima**, extremely handsome, silvery white foliage; very ornamental as a decorative pot plant, or for bedding purposes.....10
- " **hybrida, very dwarf**, growing only eight inches high. Blooms profusely; many colors; desirable...25
- " **hybrida flore pleno**, the flowers are perfectly and evenly double, being entirely made of ligulate florets, as in double Jacobæa. The colors run through all the shades peculiar to Cinerarias.....50
- " **hybrida, choicest mixed**, from the best named varieties. *Extra choice*.....25

CLARKIA.

The flowers are pretty and of many colors, double and single. Hardy annual; one and a-half feet high.

CLARKIA ELEGANS.

- Clarkia pulchella flore pleno, double, beautiful, rich magenta color..... 5
- “ pulchella integripetala, rosy crimson..... 5
- “ elegans flore pleno, double rose..... 5
- “ mixed, best and finest varieties..... 5

CLEMATIS.

Well known and universally admired climbers, some of the varieties being remarkable for the beauty and fragrance of their blossoms. Fine for covering arbors, verandas, etc., as they cling readily to almost any object. Most of the kinds are hardy, herbaceous perennials, but some little protection in northern latitudes, through winter, is advised.

- Clematis Virginiana (Virgin's Bower), a rapid climber with white blossoms, growing twenty feet in a single season.....10
- “ Verticellata, produces beautiful blue flowers from June to September, on long peduncles from the axils of the leaves. Grows eight to ten feet in a season.....10
- “ Flammula, a luxuriant climber with clusters of small, white, fragrant flowers in August and September. Sometimes called Sweet Virgin's Bower..10
- “ mixed, a superb mixture of Jackman's Hybrids. Cannot be excelled.....10

CLIANTHUS.

Curious green-house shrubs, with singularly beautiful foliage, and magnificent clusters of long, drooping flowers, somewhat resembling a parrot's beak. Does not bear transplanting and should be kept rather dry. Among the most magnificent blooming plants in cultivation.

CLIANTHUS DAMPIERI.

- Clianthus Dampieri, bright scarlet blossoms.....20

COBÆA.

A fine, rapid growing climber, with handsome foliage and large, bell shaped flowers, green at first, but rapidly changing to a beautiful deep violet-blue. A well established plant will run fifty feet in a season, covering a large veranda with handsome foliage and beautiful flowers. Tender perennial.

- Cobæa scandens.....10

COCKSCOMB—(Celosia).

Highly ornamental plants, producing crested heads of flowers, somewhat resembling a cock's comb. There are many shapes and colors, but of all colors the scarlet and crimson are the most brilliant and rich. Tender annual; one to three feet high.

- Celosia cristata, dwarf crimson, brilliant.....10
- “ “ “ rose, deep rose.....10
- “ “ “ yellow, fine.....10
- “ “ “ mixed.....10
- “ Glasgow Prize, a very fine, semi-dwarf variety; with large, brilliant crimson comb, and handsome dark foliage.....15
- “ new Japan (Celosia Japonica), the comb is finely cut, delicate as lace, and wonderfully brilliant.....10
- “ variegated, very handsome.....10

COLEUS.

Probably there is no other kind of ornamental foliage plant so well known and universally admired as the Coleus. The leaves are of all shapes, shades and colors, and nearly all have a rich, velvety appearance of extraordinary beauty. No yard should be without these decorative plants. Tender perennial.

COLEUS.

- Coleus, mixed, twenty-five best named sorts.....25
- “ new hybrids mixed.....25

COLUMBINE—(Aquilegia).

The old single varieties of Columbine have been known and admired for centuries under the name of Honeysuckle. The new double sorts are very beautiful, and embrace a great variety of colors and forms. Hardy perennial; two feet high.

COLUMBINE. CALIFORNICA HYBRIDA.

- Aquilegia alba plena**, double white.....10
- cœrulea hybrida**, double, a vigorous growing, very handsome variety with blue and white flowers.....10
- California hybrida**, one of the handsomest of all the columbines, having orange, red and yellow flowers.....10
- vervaeneana fol. variegatis**, plants variegated, reproduced with certainty from seed. Double rose colored blossoms; exceedingly beautiful.....15
- mixed double**, best and finest colors.....10

COMMELINA—(Day Flower).

Has splendid white and blue flowers. Tender perennial; one and a-half to two and a-half feet high.

- Commelina cœlestis**, sky blue..... 5
- alba**, white..... 5
- mixed**..... 5

CONVOLVULUS.

A magnificent class of trailing annuals. Useful for verandas, lattice, etc., and grows freely in any good garden soil.

- Convolvulus aureus superbus**, very large, golden yellow flowers; grows six feet high.....15
- mauritanicus**, trailing plant, about one foot high, and produces an abundance of rich, satiny, lavender blossoms. Especially adapted to rock work or baskets; perennial in greenhouse.....10
- Major** (See Morning Glory).

CONVOLVULUS, DWARF.

CONVOLVULUS MINOR—(Dwarf Morning Glory).

Dwarf plants, of trailing, branching habit, each plant occupying a space of two feet. At mid-day they are completely covered with a mass of most brilliant, many colored blossoms, which remain open till evening, in dry weather. Half-hardy annual; one foot high.

- Convolvulus Minor tricolor**, bright blue, shaded to pure white, next to the golden centre..... 5
- Minor alba**, pure white..... 5
- striata**, finely shaped..... 5
- mixed**..... 5
- flore pleno**, a new double variety.....10
- unicaulis**, a single, upright stem, without a branch and with a compact head of flowers borne in great profusion; color purplish-blue.....10

COIX—(See Job's Tears).

COSMOS.

A very effective autumn flowering plant. Quite hardy and rapid growing, forming bushes often four feet high and covered with large, single, daisy like flowers, two to three inches round, and of a great variety of bright and attractive colors.

- Cosmos bipinnata hybrida**, finest mixed.....25

CRUCIANELLA.

A pretty little plant, growing one foot high, and producing clusters of star shaped, pink flowers. Fine for rock work, vases, etc. Hardy perennial.

- Crucianella stylosa**..... 5

CUCURBITA—(See Gourds).

CUPHEA.

A favorite bedding plant with green-house men; familiarly known as Cigar Plant, on account of its fancied resemblance to a lighted cigar. Tender perennial; one and a-half feet high.

- Cuphea platycentra** (Cigar or Firecracker Plant), scarlet, white and purple.....10

CYCLAMEN.

Well known and universally admired tuberous rooted plants, producing exceedingly handsome red and white flowers. Tender perennial; one foot high.

CYCLAMEN.

- Cyclamen Persicum**, mixed, variety of great beauty and many colors.....25
- Persicum giganteum**, mixed, characterized by beautiful foliage and profuse bloom; each flower is from two to two and a-half inches long. Very choice.....50

CYPRESS VINE—(Impomœa Quamoclit).

A most beautiful climber, with delicate, dark green, feathery foliage, and an abundance of bright, star shaped, rose, scarlet and white blossoms, which in the bright sunshine present a mass of beauty. Planted by the side of veranda, tree or stakes, and trained properly, there is nothing prettier. Tender annual; fifteen feet high.

- Cypress Vine**, scarlet..... 5
- rose**..... 5
- white**..... 5
- mixed**..... 5

DAHLIA.

This magnificent race of plants is too well known to need description, though it is *not* generally known that they may be had in the greatest variety and beauty from seed, both of the single and double sorts. If planted early and *pushed* they can be made to flower the first season. Tender herbaceous perennials.

- Dahlia**, finest double, mixed, seed saved from choicest double flowers.....15
- finest single**, mixed, brilliant flowers running through a wide range of striking colors.....15

DAHLIA, SINGLE.

DAISY—(Bellis).

Admirable plants for cultivating in pots or in beds or borders which are partially shaded. Grown from seed, fully three-fifths of the plants will produce flowers as large and perfect as any of the named sorts. Tender perennial; height six inches.

DAISY, DOUBLE.

- Daisy, double white.....15
- “ “ red, a novelty of high merit, introduced under the name of “Longfellow.” Comes true from seed. Flowers very large and double.....25
- “ double mixed, choice.....15

DATURA.

Large, branching plants, producing handsome, double and single, trumpet shaped blossoms, yellow, white, lilac and of exquisite fragrance. Some of the flowers are equal in beauty to our choicest lilies. Tender annuals; three feet high.

- Datura Wrighti**, pure white at the center, passing into lilac and blue at the border; a magnificent plant.... 5
- “ **chlorantha fl. pl.**, magnificent, large, double yellow blossoms, richly scented..... 5
- “ **fastuosa alba fl. pl.**, flowers double, pure white..... 5
- “ mixed, seeds of the above varieties mixed..... 5

DELPHINIUM—(See Larkspur).

DEW PLANT—(See Mesembryanthemum).

DIANTHUS—(See Pink).

DIANTHUS BARBATUS—(See Sweet William).

DIANTHUS CARYOPHYLLUS—(See Carnation).

DIGITALIS—(See Foxglove).

DOLICHOS—(See Hyacinth Bean).

ELICHRYSUM—(See Helichrysum).

ERAGROSTIS—(See Love Grass).

ERIANTHUS RAVENNAE.

A very desirable ornamental grass, equal to Pampas Grass

ERIANTHUS RAVENNAE.

in appearance and habit of growth, and superior to it for general culture, as it is entirely hardy and blooms more abundantly. Perennial; height six feet.

Erianthus Ravennae.....10

ESCHSCHOLTZIA—(California Poppy).

A genus of the poppy family and fully as valuable as the common poppy for garden ornamentation, and as easily grown. Nothing is handsomer or richer in color than a bed of these in full bloom. Hardy annuals; height one foot.

- Eschscholtzia mandarin.** The outer side of the petal is brilliant scarlet, the inner side, rich orange.....15
- “ **Californica**, bright yellow..... 5
- “ **crocea alba fl. pl.**, creamy white, double..... 5
- “ “ **striata**, beautifully striped..... 5
- “ **mixed.**..... 5

EULALIA JAPONICA.

A most magnificent ornamental grass from Japan, growing five to six feet high, and exceedingly graceful. A single plant often makes thirty to forty elegant, recurved flower spikes of light violet color, resembling ostrich plumes. Beautiful for vases in the winter.

Eulalia Japonica, light violet, beautiful.....10

EUPHORBIA.

Euphorbia variegata, hardy annual; foliage beautifully veined and margined with white; very showy. Sometimes known as “Snow on the Mountain”..... 5

EUTOCA.

Foliage dull green, covered with hairs; blossoms intense blue striped, three-quarters of an inch across, produced in terminal racemes. A branch placed in water will bloom many days. Hardy annual; one foot high.

- Eutoca viscida**, blue..... 5
- “ “ **alba striata**, striped..... 5
- “ “ **mixed.**..... 5

FEATHER GRASS—(Stipa).

Hardy, perennial, ornamental grass of much beauty, used in the formation of winter bouquets.

Stipa pennata (Feather Grass), delicate and pretty...10

FERNS.

Flowerless plants, too well known to need description. Many of the most beautiful sorts are propagated from seed only. Their exceeding grace and beauty will well repay all care bestowed upon them.

- Ferns, fine mixed.**.....25
- “ **“ fifty finest species mixed**, unsurpassed.....25

FEVERFEW.—(See Matricaria and Pyrethrum).

FORGET-ME-NOT—(Myosotis).

FORGET-ME-NOT, ALPESTRIS.

- Myosotis alpestris**, plant of compact, bushy habit, growing six to eight inches high; flowers large, blue; hardy perennial.....10
- “ **disitiflora**, very deep blue; early blooming; hardy perennial.....15

FOUR O'CLOCK—(Marvel of Peru).

The plants are large and require four feet of space; make a pretty hedge. The flowers are funnel shaped, white, red and striped, very fragrant, and open about four o'clock in the afternoon, remain open all night, and generally perish before noon the next day. The French call it *Belle de Nuit*, "Beauty of Night." Will grow in any common garden soil, from seed sown in open ground. Hardy annual; two feet high.

Four O'Clock, gold striped	5
" " red	5
" " white, red striped	5
" " yellow, red striped	5
" " white	5
" " yellow	5
" " mixed	5

FOXGLOVE—(Digitalis).

Plants produce dense spikes of flowers on stems three to five feet high. The blossoms are thimble shaped, purple, white and spotted. Hardy biennial.

Digitalis, Ivory's spotted, an endless variety of colors; robust, strong and hardy..... 5
 " **splendid mixed**..... 5

FRAGARIA—(Chinese Strawberry).

Hardy, perennial, herbaceous creeper from India, with yellow blossoms, and bright red fruit, like small strawberries. Elegant for rock work or hanging baskets.

Fragaria Indica.....10

FRENCH HONEYSUCKLE—(Hedysarum).

Very handsome, free flowering plants, producing racemes of beautiful pea like flowers; particularly adapted for borders or rockwork. Hardy perennial; four feet high.

Hedysarum coronarium, brilliant scarlet..... 5
 " **fl. alba, true; white**..... 5

FUCHSIA.

The varieties of Fuchsias are numbered by hundreds, and some are exceedingly beautiful. They are as easily grown from seed as cuttings, and from seed many improved varieties are obtained. Tender perennial.

Fuchsia, double, finest mixed, from the finest specimens.....25
 " **double, white corollas, very beautiful**.....25

GAILLARDIA.

Showy plants, flowering the first year, and among the gayest ornaments of summer flowering beds.

GAILLARDIA PICTA LORENZIANA.

Gaillardia picta, one foot high; flowers crimson and yellow. Half hardy annual..... 5
 " **picta Lorenziana.** For general decorative purposes, as well as for bouquets, this is invaluable, its gay colored flowers being abundantly produced from July until frost. Half hardy annual; one foot high; sulphur, orange, claret and amaranth, mixed.....10
 " **grandiflora, the largest flowers of the species; blossoms scarlet and orange. Hardy perennial**.....10

GERANIUM—(Pelargonium).

Probably the Geranium is better known and more universally admired than any other plant-grown. The constant

succession and durability of bloom till frost comes, the brilliancy of the scarlet and other colors, and the exquisite markings of the leaves of some of the varieties, render them very desirable for pot culture and bedding. No garden seems complete without a bed of them, and in every collection of conservatory or parlor plants we are sure to find the Geranium. Propagation by seed is the only way to obtain new varieties. One-half hardy perennial.

GERANIUM ZONALE.

Geranium (Pelargonium), diadematum, splendid variety..... 50
 " **(Pelargonium), Odier, five petals blotched**..... 50
 " **" fancy, splendid mixed**..... 25
 " **double, finest double varieties mixed**..... 50
 " **Zonale, scarlet, mixed sorts**..... 25
 " **white leaved varieties, mixed**..... 25
 " **golden and bronze, magnificent**..... 25
 " **apple scented, very fragrant**..... 25

GILIA.

Hardy annual, one to two feet high; grows in almost any situation, in beds or in rockery.

Gilia capitata, dense, globular heads of clustered blossoms of azure blue. Two feet high..... 5
 " **tricolor, flowers blue, with yellow and purple center. Sow in masses. One foot high**..... 5

GLADIOLUS.

The varieties of this magnificent plant are now numbered almost by thousands, each year bringing forth new and choice selections which have been produced from seed, which is the only method of obtaining new varieties. Half hardy perennial.

Gladiolus, finest mixed, from choice named varieties.....25
 For Bulbs, see Spring Bulbs in this Catalogue.

GLAUCIUM—(Horned Poppy).

One of the most ornamental of silver leaved plants. The leaves are recurved, elegantly indented and silvery. Flowers bell shaped, orange. Hardy perennial; one and one-half feet high.

Glaucium corniculatum.....10

GLOBE AMARANTH—(Gomphrena).

A desirable everlasting, valued for its handsome, globular heads of flowers, which, if cut, when well matured, will retain their beauty for years. Tender annual; two feet high.

Gomphrena globosa, purple..... 5
 " **white**..... 5

Gomphrena globosa, flesh colored 5
 " " orange 5
 " " striped 5
 " " mixed 5

GLOBE AMARANTH.

GLOXINIA.

Green-house perennial plants, producing rich and beautifully colored flowers. They deserve extensive cultivation.

Gloxinia Hybrida, mixed, all choice sorts 25

GNAPHALIUM—(Everlasting).

An interesting class of immortelles, with rather homely foliage, but beautiful clusters of bright golden blossoms, which, if plucked when on the point of opening, and dried in the shade, will retain their beauty for years. Good for forming winter bouquets in conjunction with other everlasting and grasses.

Gnaphalium fetidum, tender annual, one and a-half feet high 10

" **leontopodium (Edelweiss)**. This is the true Edelweiss found on the Alps, and so highly esteemed by travelers in Switzerland. Flowers star shaped, pure white, and downy in texture. Perennial 15

GODETIA.

Beautiful garden plants, of easy cultivation in any good garden soil, having delicately shaded large blossoms. Hardy annual; one to one and a-half feet high.

Godetia rubicunda splendens, a showy variety. Rosy lilac flowers, with purple stain in the centre 5

" **rosa alba (Tom Thumb)**, delicately blotched blossoms, white at the outer portion and rose at the base of petals 5

GODETIA RUBICUNDA SPLENDENS.

Godetia Lady Albemarle, carmine crimson; compact habit; very beautiful 10
 " **Whitneyi, Duchess of Albany**, a magnificent sort, producing a profusion of large, rich, satiny-white flowers, measuring about four inches across 10

GOURDS—(Cucurbita).

A tribe of climbers with curiously shaped fruit, in various colors. Being of rapid growth, they are fine to cover old fences, trellises, stumps, etc. The foliage is quite ornamental. Tender annual climber; ten to twenty feet high.

GOURD, PEAR SHAPED.

Gourd, orange, the well known Mock Orange 5
 " **Japanese Nest Egg**, white; like an egg; do not crack and are not injured by heat or cold 10
 " **apple shaped**, yellow; beautifully striped 10
 " **pear shaped**, yellow and green, striped with cream color 10
 " **pear shaped, ringed (Pyriformis annulata)**, exceedingly beautiful fruit with rings running around it; green ends 10
 " **bottle**, handsome and useful 10
 " **Corsican**, elegant fruit and rapid climber 10

GOURD, SIPHON, OR DIPPER.

Gourd, siphon, or dipper, useful for dippers 10
 " **powder horn**, in the form of a powder horn 10
 " **Hercules' Club**, the longest of all the varieties 10
 " **mixed**, ornamental 10

GRAMMANTHES.

A charming little succulent plant, producing an abundance of bright scarlet and orange yellow blossoms in the shape of a star. It is especially adapted for rock work, hanging baskets, edgings, etc. Tender annual; six inches high.

Grammanthes gentianoides, rich orange-scarlet 10

GYNERIUM—(See Pampas Grass).

GYPSOPHILA.

Delicate free flowering little plants, covered with a profusion of little star shaped, white blossoms. Well adapted for hanging baskets and edgings, and valuable for making bouquets. Make handsome specimens dried.

Gypsophila elegans, white and pink flowers; hardy annual; one foot high 5
 " **muralis**, pink flowers; hardy annual; six inches 10

HEDYSARUM—(See French Honeysuckle).

HELIANTHUS—(See Sun Flower).

HELICHRYSUM.

Large, full, double flowers of various colors, from bright yellow to scarlet shaded and tipped. Peculiarly desirable as dried specimens; exceedingly handsome bouquets may be formed of them for winter, if blossoms be gathered when on the point of expanding. Hardy annual; six inches to two feet high.

HELICHRYSUM

Helichrysum bracteatum (Golden Eternal Flower), bright yellow.....	5
" nanum atrosanguineum fl. pl. , deep crimson.....	5
" compositum album fl. pl. , flowers white.....	5
" monstrosum fl. pl. , mixed, eight varieties of largest double flowers, mixed.....	5
" nanum fl. pl. , mixed, dwarf growing, double flowering varieties, mixed.....	5
" minimum fl. pl. , mixed, beautiful little miniature double flowers.....	5
" mixed	5

HELIOTROPE.

Highly valued for the fragrance of their flowers and duration of bloom. Half hardy perennial; one foot high.

Heliotropium, Anna Turrell , violet-blue.....	10
" Roi des Noirs , black, splendid.....	10
" Triumphe de Liege , deep blue; fine.....	10
" dark varieties, mixed, very choice	10

HELIPTERUM—(Everlasting).

A very desirable and distinct dwarf everlasting, with large globular clusters of bright yellow and pure white, star like flowers. Are excellent for forming winter bouquets, and will retain their brilliancy for years. Hardy annual; one foot high.

Helipterum Sandfordii , golden.....	10
" anthemoides , pure white.....	10
" mixed	10

HESPERIS—(See Rocket).

HIBISCUS.

A branching plant of the easiest culture, with rather pretty foliage, and large, exceedingly showy blossoms.

Hibiscus Africanus , cream colored blossoms; purple in the center. Hardy annual; two feet high.....	5
" coccineus , large, brilliant scarlet blossoms; very showy; green-house perennial; three feet high.....	10
" mutabilis albus fl. pl. , double white. Very choice green-house perennial.....	25

HOLLYHOCK.

The hollyhock, in its present state of perfection, is very unlike its parent of olden time; it now ranks with the dahlia, aster, camellia, etc. For a background to a flower garden, perhaps no plant is so useful. Hardy perennial; five feet high.

Hollyhock, double, pure white	15
" " lemon yellow	15
" " rose	15
" " salmon, or bluish pink	15

HOLLYHOCK, DOUBLE.

Hollyhock, double, crimson	15
" " choice mixed	10
" " mixed	5
" Chater's finest mixed, double varieties of the greatest perfection mixed	15

HONESTY, or SATIN FLOWER—(Lunaria).

Early, free flowering plants, interesting for the silver like tissue of the seed pods in their matured state. The flower is purple; not very conspicuous. The seed pods are fine for skeletonizing and working in with other everlasting flowers for winter bouquets. Hardy biennial; two feet high.

Honesty (Lunaria biennis)	5
--	---

HORDEUM—(Ornamental Grass).

A beautiful ornamental grass for forming winter bouquets. It somewhat resembles our domestic barley, having heavy, bearded heads. Hardy annual.

Hordeum jubatum , two feet high.....	10
---	----

HUMEA.

A remarkable, handsome plant for decorative purposes. Leaves very fragrant when slightly rubbed. Half-hardy biennial; six feet high.

Humea elegans , red, from New South Wales.....	10
---	----

HUMULUS JAPONICUS—(Japan Hop).

A rapid growing, perfectly hardy, annual climber of the hop family, of the easiest culture and indispensable for covering unsightly objects, or verandas, trellises, etc. Sows itself after the first year.

Humulus Japonicus	15
--------------------------------	----

HYACINTH BEAN—(Dolichos).

Splendid climber, with abundant clustered spikes of purple and white flowers, which are followed by exceedingly ornamental seed pods. Tender annual; ten to twenty feet high.

HYACINTH BEAN.

Dolichos lablab purpurea , purple.....	10
" " alba , white.....	10
" " mixed, the above mixed	10
" giganteus , tall growing, with large purple flowers.....	10

IBERIS—(See Candytuft).

ICE PLANT—(See Mesembryanthemum).

IMPATIENS SULTANI—(Sultan's Balsam.)

Impatiens Sultani, plant of compact growth; flowers gorgeously colored and produced in great profusion throughout the season. Although a green-house plant, it does finely in open border; flowers brilliant rosy scarlet color, one to one and one-half inches in diameter.25

INDIAN SHOT.—(See Canna Indica.)

IPOMŒA.

Beautiful climbers, and exceedingly attractive mixed with other climbers. They are alike good for green-house, for pots and baskets, and for trellises, stumps, arbors, etc. Tender annual; five to ten feet high.

IPOMŒA LIMBATA.

- Ipomœa coccinea** (Star Ipomœa), fine scarlet. 5
- " *bona nox* (Good Night), pure white. 5
- " *limbata*, elegantly blotched and margined with white 5
- " *limbata elegantissima*, flowers, star shaped with intense purple centre, and pure white margin. 5
- " *rubra cœrulea*, immense flowers of bright sky blue. 10
- " *fine mixed*. 5

IPOMŒA QUAMOCLIT.—(See Cypress Vine.)

IPOMOPSIS.—(See Tree Cypress.)

JACOBÆA—(Senecio).

Remarkably pretty, free growing, profuse flowering plants. *The double are the only ones worth cultivating.* Hardy annuals in open border, biennial in green-house. One foot high.

Jacobæa dwarf, mixed.10

JAPAN HOP.—(See Humulus Japonicus.)

JASMINE.

Hardy, deciduous, ornamental shrubs, growing three feet high, and producing beautiful yellow flowers.

Jasminum fruticans, yellow, very fragrant.10

JOB'S TEARS—(Coix).

Curious, ornamental grass with broad, corn like leaves, and seeds of a light slate color. Valuable for the formation of winter bouquets, in connection with everlasting flowers, and strings of handsome beads are formed from the seeds. Hardy annual; three feet high.

Coix lachryma (Job's Tears) 5

JOSEPH'S COAT—(See Amaranthus Tricolor).

KAULFUSSIA.

Beautiful, free blooming little plants of dwarf and compact growth, somewhat resembling the single asters. Flowers are light blue, pure white, and a most intense violet-purple. A good plant for mixed beds and borders. Hardy annual; six inches high.

Kaulfussia, fine mixed. 5

LANTANA.

These plants are rapid growers, forming small, hardy

shrubs, and producing their pink, yellow, orange and white flowers in great abundance.

LANTANA.

Lantana, finest French hybrids, mixed, all colors.10

LARKSPUR—(Delphinium).

The Larkspur is one of the handsomest and most useful of plants, and for large gardens is invaluable.

ANNUAL SORTS.

- Delphinium ajacis** (Double Dwarf Rocket Larkspur), hardy annual; ten inches high; *mixed*. 5
- " *Cardiopetalum*, deep blue, heart shaped. Hardy annual; one and one-half feet high. 5
- " **Tall Stock flowered** (*consolida fl. pl.*), *brightest and best colors mixed*. Spikes of double flowers eighteen inches long. Hardy annual; two feet high 5

DELPHINIUM, TALL STOCK FLOWERED.

- Delphinium Imperiale fl. pl.** (Double Emperor Larkspur), one and a-half feet high, compact and profuse bloomer, having erect spikes of perfectly double flowers. *Mixed colors*.10
- " **consolida candelabrum fl. pl.**, a type of annual Larkspur, growing in the form of a branched candlestick; flowers double and of various colors.10

PERENNIAL SORTS.

- Delphinium elatum** (Bee Larkspur), has hairy petals in the center, and a fancied resemblance to a bee. Hardy perennial; five feet high..... 5
 " **grandiflorum album**, large double white flowers. Hardy perennial; four feet high.....10
 " **formosum**, rich blue and white. Hardy perennial; three feet high..... 5
 " **nudicaule**, eighteen inches high, with scarlet flowers; fine for rockeries, flower borders, or pot culture; hardy perennial.....10
 " **Zalil**, a handsome yellow flowered variety. Hardy perennial.....25

LATHYRUS LATIFOLIUS—(See Peas).

LATHYRUS ODORATUS—(See Sweet Peas).

LIMNANTHES.

A native of California; quite hardy; of prostrate habit; stems ten or twelve inches long, crowned with numerous fragrant flowers, each about an inch across. Hardy annual; eight inches high.

- Limnanthes Douglasi**, yellow and white..... 5

LINARIA—(Kenilworth Ivy).

A pretty, trailing plant for covering rock work, and very useful for hanging baskets. Hardy perennial.

- Linaria cymbalaria**.....15

LINUM.

A beautiful and effective genus of plants, of slender and delicate growth, and having a profusion of bright flowers.

- Linum grandiflorum rubrum** (Scarlet Flax), from Algiers. Hardy annual..... 5

LOBELIA.

A most elegant and useful genus of plants, of easy culture, and well adapted for bedding, edging, pots or rockeries. They are employed as universally in general summer gardens as scarlet geraniums, to beds of which they form a neat and effective edging.

LOBELIA CARDINALIS.

- Lobelia erinus** (Blue King), intense dark blue, with white eye; dark colored foliage. Half-hardy annual.....10
 " **erinus** (Queen of Whites), pure white flowers. Half-hardy annual.....10
 " **erinus** (Crystal Palace), A variety with large blue flowers; one-half hardy annual.....10
 " **erinus gracilis**, fine for baskets, vases, etc., trailing gracefully and blooming profusely. Half-hardy annual.....10
 " **cardinalis** (Queen Victoria), scarlet, with dark foliage. Hardy perennial.....15
 " **cardinalis** (Cardinal Flower), a native variety, with spikes of brilliant scarlet flowers. Hardy perennial; two feet high.....10

LONDON PRIDE—(See *Lychnis Chalcedonica*.)

LOPHOSPERMUM.

Beautiful climbers, with purple and violet blossoms; suitable for covering trellis work, etc. Tender perennial.

- Lophospermum scandens**, flowers violet-purple; ten feet high.....10

LOVE GRASS—(*Eragrostis*).

A very pretty species of ornamental grass, growing one foot high, good for winter bouquets. Hardy annual.

- Eragrostis elegans**, beautiful, dancing spikelets..... 5

LOVE GROVE—(*Nemophila*).

Of dwarf, spreading habit, it is well adapted for border or pot culture. The flowers are blotched and spotted, sporting into an endless variety of shades and color. Hardy annual; six inches high.

- Nemophila, mixed**, several colors..... 5

LOVE-IN-A-MIST—(*Nigella*.)

This singular plant is known as Lady-in-the-Green and Devil-in-a-Bush, because the blossoms are partially concealed by the abundance of finely cut foliage. Hardy annual.

NIGELLA DAMASCENA.

- Nigella Damascena fl. pl.**, double, blue blossoms; one and a-half to two feet high..... 5
 " **Damascena nana fl. pl.**, double, white and blue blossoms; one foot high..... 5

LUPIN—(*Lupinus*).

Very conspicuous plants, with spikes of pea shaped blossoms of various colors. Hardy annual; about three feet high.

LUPINUS CRUIKSHANKI.

- Lupinus Hartwegi**, a beautiful species with delicate foliage and blue blossoms..... 5
 " **Cruikshanki**, blossoms white, shaded with yellow, blue and purple..... 5

LYCHNIS.

There are few plants that produce such brilliant blossoms. The flowers are produced in clusters, and are constantly coming out all summer. Hardy perennials; one to three feet high.

- Lychnis chalcedonica** (London Pride), bright scarlet; two feet high..... 5

The following are perennial, but will blossom the first year.

- Lychnis Haageana* (Benary), elegant, large, scarlet blossoms with jagged petals; one foot high.....10
- " *Sieboldii* produces large, white flowers, two feet high.15
- " *Haageana grandiflora gigantea*, three feet high. The flowers are scarlet, much larger than any of the preceding.....10

LYTHRUM.

A perennial plant of easy culture, producing long spikes of bright rose flowers. Hardy perennial; two feet high.

LYTHRUM.

- Lythrum roseum superbum*..... 5

MARIGOLD.

The Marigold has been grown from time immemorial, and where a rich display of bloom is desired, is almost indispensable. The African varieties are tall, growing usually two feet or more, while the French are more dwarf. All are desirable. Hardy annuals, in bloom till frost comes.

MARIGOLD, DWARF FRENCH.

- Marigold, African, double dwarf, lemon colored,** new, very early, a profuse bloomer of very compact habit. One of the best of this class; height fifteen inches.....10
- " **African, Orange Quilled,** a double variety, with quilled petals; showy..... 5
- " **African, El Dorado,** flowers three to four inches in diameter, imbricated and extremely double.....10
- " **African, mixed,** selected from the finest double flowers..... 5
- " **French, Tagetes stenata pumila,** bright yellow flowers; elegant habit. Finest varieties mixed..... 5
- " **French, new gold striped,** brown and golden yellow; very double..... 5
- " **Prince of Orange, Calendula officinalis, fl. pl.,** large, double, dark orange striped flowers; very useful for cutting. Comes true from seed..... 5

- Marigold, Meteor, Calendula officinalis fl. pl.,** large, extremely double white and orange striped flowers. Lighter colored than Prince of Orange. Comes true from seed..... 5
- " **Cape, Calendula poncei fl. pl.,** double, white; fine; 5
- " **Cape, Calendula pluvialis,** flowers single, white brown underneath..... 5

MARVEL OF PERU—(Mirabilis).—(See Four O'Clock.)

MARTYNIA.

- Easily grown, large flowering, half-hardy annuals.
- Martynia formosa* (Fragrans), foliage thick, soft and velvety. Flowers delicate rose lilac, blotched and shaded with crimson. *Fragrant*..... 5
- " **proboscidea,** curious on account of its singular seed vessels, which are much esteemed, when young, for pickles..... 5

MATHIOLA.—(See Stocks).

MATRICARIA—(Feverfew).

- Matricaria eximia grandiflora fl. pl. (Double Feverfew),* white, double; desirable for bedding; one-half hardy annual.....10

MAURANDIA.

- Graceful climber for green-house, parlor, baskets, or outdoor purposes. Set out in the border with a little frame to which to attach their tendrils, they will be loaded all the season with rich purple, white and rose, foxglove shaped blossoms. Tender perennial climber; six feet high.
- Maurandia, mixed,* choicest kinds mixed.....10

MESEMBRYANTHEMUM.

MESEMBRYANTHEMUM.

- Mesembrythemum crystallium (Ice Plant),* handsome and curious plant for hanging baskets, rock work, vases and edgings. The leaves and stems are succulent and fleshy and appear as though covered with ice crystals. Tender annual trailer; six inches high; white..... 5
- " **cordifolium variegatum,** the leaves are blotched with light yellow and cream colored spots. Fine for green-house or conservatory; half hardy annual; six inches high.....10
- " **tricolor (Dew Plant),** pink, with purple center; half-hardy annual..... 5

MIGNONETTE.

A well known hardy annual, producing dense, semi-globular heads of exceedingly fragrant flowers, borne on spikes from three to six inches long. It is so fragrant that the whole atmosphere around is perfumed. If sown at intervals in spring and early summer, it will be in bloom till killed by frost. Seeds sown in autumn will bloom early in spring. Hardy annual; one foot high

- Mignonette, Golden Queen,* golden yellow; powerfully fragrant.....15
- " **Victoria,** valuable; dark red blossoms.....15
- " **reseda odorata grandiflora,** large flowered. The common Sweet Mignonette..... 5
- " **crimson flowered Giant,** of robust habit, with very large spikes of handsome crimson flowers.....10
- " **Parson's white flowering Giant,** flowers almost pure white, borne on spikes six inches to a foot in length..... 10
- " **Dwarf Compact,** forms a dense, semi-globular bush about ten inches high. Good for pot culture or market purposes.....10
- " **Tall Pyramidal,** tall growing, foliage dark green, flower spikes club shaped; large.....10

- Mignonette, Pyramidal Bouquet**, forms a dense, short pyramid, the numerous branches being terminated by large spikes of red flowers. Good for pot culture, and for the open border.....10
- " **Machet**, of dwarf and vigorous growth, throwing up numerous stout flower stalks, terminated by massive spikes of red flowers. One of the very best sorts for pot culture.....10

MIMOSA—(See Sensitive Plant)

MIMULUS.

Strikingly handsome flowers of easiest cultivation. Perennial in the green-house, annual in the open air. Start under glass.

MIMULUS.

- Mimulus moschatus** (Musk Plant), cultivated on account of the musky odor of the plant.....10
- " **punctatus** (Monkey Flower), large beautifully spotted blossoms; blooms first year.....10
- " **double** (*tigrinus duplex*), splendid variety, with beautiful double tubed flowers.....25

MINA LOBATA.

Very useful, rapid growing, summer climber of the Ipomœa family. Flowers in long racemes, rosy-crimson at first, changing to orange and pale yellow as they advance. Tender annual; fifteen feet high.

- Mina lobata**.....25

MOLUCELLA.

Molucca balm, or shell flower, is a very curious plant. Within the calyx a button shaped bud appears, which unfolds into a shell shaped flower of a white and purple color. It is a hardy annual, growing two or three feet in height with few leaves, but such numerous branches that its width is often as great as its height.

- Molucella laevis**.....10

MOMORDICA.

A curious annual climber, with yellow blossoms and foliage similar to the canary bird flower. The fruit, the chief curiosity, is egg and pear shaped, and covered with warty excrescences, and when ripe bursts suddenly open, scattering its seed and showing a brilliant carmine interior. Fine for trellises, fences, stumps, etc.

MOMORDICA BALSAMINA.

- Momordica balsamina** (Blasam Apple)..... 5
- " **charantia** (Balsam Pear)..... 5

MORNING GLORY—(*Convolvulus Major*).

Handsome, showy climber of easy culture, and suitable for covering arbors, windows, trellises, old stumps, etc. It is so perfectly hardy as to grow in almost any soil. Hardy annual; ten feet high.

- Convolvulus Major, striped**..... 5
- " " **blue**..... 5
- " " **crimson**..... 5
- " " **white**..... 5
- " " **purple**..... 5
- " " **mixed**..... 5
- (See also *Convolvulus*.)

MONKEY FLOWER—(See Mimulus).

MOON FLOWER.

This, the true Moon Flower, is the most vigorous of all the summer climbers. Will grow 30 to 40 feet in a single season and be covered with its large white flowers every evening and cloudy day. Complaint is sometimes made that the seed fails to grow satisfactorily. This is entirely due to the method of treatment. If the hard outer coat of the seed is cut through with a sharp knife and the seed planted in a warm place and the soil kept moist, germination will take place in ten days to two weeks. After the plants are up keep growing vigorously and plant out in very rich soil when danger from frost is past. Sold also as *Ipomœa Noctiflora*.

- Calonyction** (*Ipomœa*) **grandiflora**.....15

MOURNING BRIDE—(*Scabiosa*).

Sometimes called Sweet Scabious. Very useful for bouquets, as their long stems work easily, and their striking colors are very effective. Hardy annual; one to two feet high.

SCABIOSA ATROPURPUREA.

- Scabios atropurpurea**, deep purple..... 5
- " **candidissima**, pure white..... 5
- " **mixed**, many colors..... 5

MUSK PLANT.—(See Mimulus.)

MYOSOTIS.—(See Forget-Me-Not.)

NASTURTIUM, TALL—(*Tropæolum Lobbianum*).

The Lobbianum differs from the common running nasturtium, less rank growing, more floriferous and having richer, more varied colored flowers, and is admirably adapted for green-house or conservatory decoration in winter. Colors brilliant and of many shades, from scarlet to black. Fine for covering arbors, trellises and rustic work. Hardy annual; ten to twenty feet high.

- Tropæolum Lobbianum, Geant des Batailles**, carmine.....15
- " **Lobbianum, Roi des Noirs**, black.....15
- " " **Lucifer**, very dark scarlet.....15
- " " **mixed**.....10
- " **tall mixed**, the common tall varieties..... 5

NASTURTIUM, DWARF—(*Tropæolum Minor*).

A bed of Dwarf Nasturtiums in the yard is very brilliant and attractive and blooms all the season. Hardy annual; one foot high.

- Nasturtium, Dwarf, Crystal Palace Gem**, sulphur, spotted maroon..... 5
- " **Dwarf, scarlet**..... 5
- " " **King Theodore**, very dark..... 5
- " " **Beauty**, orange and vermilion..... 5
- " " **Yellow**..... 5
- " " **Pearl, white**..... 5
- " " **Rose**..... 5
- " " **King of Tom Thumbs**..... 5
- " " **Golden King of Tom Thumbs**, brilliant gold color..... 5

- Nasturtium, Dwarf, Spotted King, yellow, spotted chocolate..... 5
- " Dwarf, Empress of India. Dark tinted foliage, color brilliant crimson..... 5
- " Dwarf, mixed..... 5

NELUMBIUM—(American Lotus).

This is one of the most beautiful and valuable of all the water lilies. The dark green leaves, 12 to 15 inches in diameter, surmounted by the enormously large double flowers resembling a monster double tulip, form a beautiful contrast and are a worthy ornament to any garden or lawn. Easily grown in tanks or ponds. Full cultural directions on each packet.

NELUMBIUM LUTEUM.

- Nelumbium luteum, yellow, fragrant..... 25

NICOTIANA.

A handsome genus of garden plants of the tobacco family which are noted for the freedom and fragrance of their bloom. Half-hardy annuals; three feet high.

- Nicotiana affinis, flowers white, salver shaped, having long tubular corollas, and are of exquisite fragrance. Deserving a place in every garden..... 10

NEMOPHILA.—(See Love Grove.)

NIEREMBERGIA.

Charming little plants, well adapted for edgings, baskets, etc. One-half hardy annual.

- Nierembergia gracilis, a fine bedding plant; white with purple eye; slender and graceful. One foot..... 10

NIGELLA.—(See Love-in-a-Mist.)

NOLANA.

Beautiful, trailing plants, with prostrate stems, much branched; almost equal to the Portulaca for growing in masses, and unsurpassed for rock work, pots, baskets or vases, as the branches hang pendulous over the edge of vase or basket. The blossoms are convolvulus shaped, brilliant, freely produced, and of various colors. Hardy, trailing annual; six inches high.

- Nolana, mixed..... 5

NYCTERINIA.

Charming little plants well adapted for rockeries and baskets. The flowers are borne on large heads, are of various colors, star shaped, and during the evening are very fragrant. Half-hardy annual; six inches high.

- Nycterinia capensis, white..... 10
- " mixed..... 10

NYPHÆA—(Water Lily).

Hardy aquatic plants, bearing exceedingly beautiful, fragrant, white blossoms, which appear as if floating on the water. Are increased by sowing the seed or by dividing the roots or tubers. They grow readily in ponds or streams of shallow water having muddy bottoms, and can be grown in aquariums, tubs or tanks, in the house.

Cultivation in Tubs.—Take a strong barrel, free from tar, oil or salt, saw it in two, fill this one-third full with fine, black, garden soil, or meadow mud, if handy; plant the seed in this mixture, covering them one inch deep, add water gently so as not to disturb the seed, until the tub is full. Always keep the tub full of water. This is all the care needed. Set this on a brick or board platform in any place you desire. The tubs, with their contents, should be placed in a cellar during the winter, kept from frost, and not allowed to entirely dry up.

For Aquariums.—Put in five inches of fine, slack loam, cover the seed one inch deep in this, and sift on enough fine sand to entirely cover the loam.

NYPHÆA ODORATA.

- Nymphaea odorata, white; fragrant..... 20

GENOTHERA.—(See Primrose).

OLEANDER—(Nerium).

This well known shrub, originally a native of India, is of easy culture, and flowers freely the greater part of the year. In warm, moist climates, it requires no protection, and attains the proportions of a good sized tree. The flowers have a salver shaped corolla, with a crown of torn appendages in the center, and are a beautiful shade of pinkish red.

- Nerium oleander..... 10

OXALIS.

Very pretty herbaceous plants with rich, rose colored blossoms. They thrive well in a mixture of loam and sand. Desirable for green-house decoration, rock work or baskets out of doors. Half-hardy perennial.

- Oxalis, rosea, rose colored..... 10
- " floribunda alba, white..... 10

PÆONY.

New varieties of these justly popular flowers are obtained from seed, and are sure to repay the little care required.

- Pæony herbacea (Chinensis), from a splendid collection of finest double sorts of all colors..... 25

PALM—(Chamærops).

The palm is perhaps one of the most ornamental plants in the green-house, and those varieties that are hardy enough to bear planting out in the lawn during warm weather are sure to command attention.

- Chamærops humilis (Dwarf Fan Palm), the most hardy and dwarf of its species, seldom attaining over eight or ten feet in height..... 15

Chamærops excelsa (Hempen Palm of China), is a green-house variety in our climate. As a lawn plant in our Southern States, nothing could be more conspicuously attractive. A well grown specimen will attain the height of twenty-five or thirty feet. .25

PAMPAS GRASS—(Gynerium).

Magnificent, ornamental grass, producing numerous flower stems surmounted by plumes of silvery inflorescence. Half-hardy perennial, from South America; ten feet high.

PAMPAS GRASS.

- Gynerium argenteum..... 10

PANSY.

These lovely flowers are favorites with all, not only for the brilliancy and variety of their colors, but for the durability of their bloom.

PANSY, TRIMARDEAU.

- Pansy, Emperor William, indigo, dark center.....10
- " King of the Blacks, coal black.....10
- " Odier, or large stained, large, each petal blotched.15
- " pure yellow.....10
- " variegated and striped, fine.....10
- " white, pure.....10
- " purple, white edged.....10
- " sky blue.....10
- " gold margined.....10

PANSY, MAHOGANY COLORED.

- Pansy, mahogany colored.....10
- " violet, white edged.....10
- " Lord Beaconsfield, the ground color is purple violet, shading off in top petals only to a whitish hue.....10
- " Snow Queen, or Snow Flake, (flowers of a delicate, pure white).....10
- " Trimardeau, very large flowered, mixed, an entirely distinct and beautiful race with flowers of the richest and most varied shades of color. Plants of vigorous and compact growth, and the flowers, which possess unusual substance and consistency are each marked with three large blotches or spots.10

- Pansy, Red Flowered, Victoria. The blooms are of good substance and form and deep claret-red, similar to that of the blood-red variety of single wall flowers.....25
- " Bugnot's Very Large Stained, mixed, a large flowering race; plants vigorous, with short stalks bearing well above the foliage large flowers of fine form and substance. Extra fine.....50
- " extra choice, mixed, from choicest named flowers.....15
- " choice mixed.....10
- " fine mixed.....5
- " collection of thirteen splendid varieties.....100

PASSION FLOWER.

A most interesting and well known order of climbers, bearing singularly beautiful flowers.

- Passiflora corulea*, hardy, deciduous climber, with blue and white flowers of remarkable beauty.....10
- " *coccinea* (*Disemma*), magnificent green-house climber, with brilliant scarlet blossoms in the form of a double coronet or crown.....20

PEAS—(Lathyrus).

A perennial climber, producing a succession of white, rose, and purple blossoms, in clusters. Suitable for trellises, arbors, etc. Hardy perennial; ten feet high.

- Lathyrus latifolius*, rose.....10
- " *latifolius*, white.....15
- " " mixed perennial.....15
- " *odoratus* (see Sweet Peas).

PENNISETUM—(Ornamental Grass).

Useful for the formation of winter bouquets. Heads barbed and feathery, and present a beautiful appearance when mixed with *Gomphrenas* and other immortelles. Will grow in any common soil. Hardy annual.

- Pennisetum longistylum*, two feet high..... 5

PENTSTEMON.

Handsome, half-hardy, herbaceous perennials, much in favor for bedding out. Flowers bell shaped in racemes or spikes constantly produced throughout the season.

- Pentstemon Hartwegi*, splendid mixed; flowers brilliant and very striking. Two feet high.....10
- " choice named varieties, seed saved from collection of best varieties.....10

PERILLA.

Ornamental foliage plants similar to *Coleus*. Fine for bedding with silver leaved plants. Foliage metallic bronze. Same culture as for *Coleus*. Half-hardy annual.

PERILLA.

- Perilla nankinensis atropurpurea laciniata*..... 5

PERIWINKLE.—(See Vinca).

PETUNIA.

Petunias are unsurpassed for massing in beds. Their richness of color, duration of bloom, and easy culture, will always render them popular. They do well sown in open border in spring, or earlier in cold frame or hot bed, and transplanted eighteen inches apart. Tender perennial, but will bloom the first season. One and a-half feet high.

- Petunia nyctaginiflora*, pure white..... 5

- Petunia hybrida*, Countess of Ellesmere, deep rose, white throat10
- " *hybrida*, finest striped and blotched, saved from striped and blotched varieties only.....10
- " *hybrida inimitabilis nana compacta multiflora* (inimitable dwarf), compact, eight inches in height, covered with regularly striped flowers.....15
- " *hybrida*, fine mixed.....5

LARGE FLOWERING SECTION.

- Petunia hybrida grandiflora marginata*, fine, green edged varieties.....20
- " *hybrida*, Prince of Wurttemberg, rose.....20
- " " Princess of Wurttemberg, purple.....20
- " *grandiflora superbissima*, splendid large throat.....25

PETUNIA GRANDIFLORA SUPERBISSIMA.

- Petunia hybrida*, large flowering, brilliant rose. A new variety with large flowers of the brightest shade of rose we have ever seen in a single petunia. One of the most desirable in the list.....25
- " large flowered, mixed, largest flowers.....10
- " *hybrida grandiflora*, choicest mixed.....15

FRINGED SECTION.

- Petunia*, fringed varieties, mixed, very desirable.....20

DOUBLE FLOWERING SECTION.

It is perhaps not generally understood that the seeds of double petunias are only obtained by artificially fecundating single blooms with the pollen from the double, and the progeny cannot all be expected to come double. The finest double petunias are always grown from seeds.

PETUNIA, DOUBLE FRINGED.

- Petunia hybrida*, double large flowering fringed, rose. New and of the highest merit; bears large, exceedingly double flowers of the most brilliant rose color. Give this a trial.....50
- " double mixed. Sure to produce a good percentage of double flowering plants.....20
- " *hybrida grandiflora robusta fl. pl.*, dwarf, of robust growth, forming a compact, upright, branched bush, about ten inches in height and fourteen inches in width, with double flowers in all shades of colors existing in petunias.....25
- " extra double fringed, many colors, beautifully fringed, a good percentage double.....50

PHACELIA.

A curious and interesting hardy annual. It makes a pretty border plant and is good for bee food.

- Phacelia congesta*, blue.....5

PHLOX.

Very hardy annuals, thriving in almost any situation, and unequalled in the magnificent display of their many and brilliantly colored flowers. Seed sown in open ground in fall or early spring will begin flowering July first and remain literally covered with bloom until after severe frosts late in autumn. For masses of separate colors or for cutting for bouquets, they are unsurpassed. One foot high.

PHLOX DRUMMONDII GRANDIFLORA ALBA.

- Phlox Drummondii grandiflora alba*, pure white; our own growth. Comes absolutely true from seed.....10
- " *Drum. grandifl.* scarlet, black center.....10
- " " " rose, deep rose.....10
- " " " Black Warrior, fine.....10
- " " " Leopoldii, red, white eye.....10
- " " " alba oculata (superba), white, purple eye.....10
- " " " brilliant, brilliant rose, dark red center....10
- " *grandifl. splendens*, crimson, pure white eye; one of the finest of this strain.....10
- " " *stellata splendens*, rich crimson with star shaped white eye. Very effective; rare.....25

PHLOX PERENNIAL

- Phlox Drum. Graf Gero**, of fine, compact growth, very effective in pots.....25
 " " **grandiflora, extra, choicest mixed**, composed of the best of the large flowered varieties.....10
 " " **fine mixed**, many fine varieties.....5
 " **perennial**. The varieties of perennial phlox are among the choicest of our flowers for bedding and border plants. They are hardy and need no protection; will flourish in any soil, succeeding better, however, in deep, rich, rather moist ground.
 " **perennial, mixed, seeds saved from splendid sorts**.....15

PINK—(Dianthus).

The dianthus family is one of the most useful and beautiful, including the Carnation and Picotee, Sweet William, Florist's, Chinese and Japan Pinks, in all their varieties.

PINK, EASTERN QUEEN.

- Dianthus Chinensis fl. pl. (Double China Pink)**, a biennial of dwarf habit; flowers the first year, but the bloom is stronger the second.....5
 " **Chinensis Heddewigii fl. pl. (Heddewig's Pink)**, flowers very large and double, having a diameter of nearly three inches; of various shades of brilliant colors. Half hardy annual.....10
 " **Chinensis Heddewigii, single mixed**, flowers deeply fringed or feathered; one-half hardy annual 5
 " **Chinensis Heddewigii diadematus (Double Diadem Pink)**. Very regular, densely double, and of all tints, from crimson-purple to deep black-purple. One-half hardy annual.....10

PINK, DOUBLE JAPAN.

- Dianthus Chinensis imperialis fl. pl. (Double Imperial Pink)**, a superb double variety from China 5
 " **Chinensis laciniatus fl. pl. (Double Japan Pink)**, to be properly appreciated, these should be seen; rich in hue, very double, deeply fringed petals—only lacking fragrance to make them perfect. Half-hardy annual.....10
 " **Plumarius Scoticus fl. pl. (Double Florist's Pink)**. This is the double form of the common garden pink; hardy perennial. Extra quality.....50
 " **Heddewigii, Eastern Queen**, beautifully marbled; the broad bands of rich mauve upon the paler surface of the petals are very striking and pretty. One-half hardy annual.....25
 " **Heddewigii, Crimson Belle**, rich, vivid crimson like color; flowers of extraordinary size and substance, evenly and finely lacinated. One-half hardy annual.....25
 " **barbatus** (see Sweet William).
 " **caryophyllus** (see Carnation).

POPPY—(Papaver).

Well known hardy annuals flowering in great profusion throughout the summer, if seed is sown early in the spring.

POPPY, CARNATION.

- Papaver bracteatum**, large, orange-crimson flowers... 5
 " **Oriente**, large, gorgeous scarlet blossoms; bottom of petals black..... 5
 " **umbrosus**, rich vermilion, with a shining black spot on each petal; one of the most showy.....10
 " **carnation, white**, fine large double white flowers... 5
 " **carnation, mixed, large, showy**, double flowers of various colors; two feet high..... 5
 " The last variety, under the name of **Papaver somniferum**, is the sort used extensively for the extraction of opium.

PORTULACA.

There are scarcely any flowers in cultivation that make such a dazzling display of beauty as a bed of portulacas. They are in bloom from about the first of July till killed by frost in autumn. Tender annual; nine inches high.

- Portulaca, alba**, pure white..... 5
 " **aurea**, deep golden..... 5
 " **striata**, striped yellow..... 5
 " **caryophylloides**, carnation striped..... 5
 " **fine mixed**, many beautiful kinds..... 5

DOUBLE VARIETIES.

Not all the plants will come double, but the single ones can be pulled out. They will stand any amount of dry weather.

- Portulaca, double, white**.....20
 " " **orange**.....20
 " " **scarlet**.....20
 " " **rose striped**.....20
 " " **sulphur**.....20
 " " **mixed**.....15

PRIMROSE, EVENING—(Enothera).

Produces large, showy blossoms, which are fully expanded only towards and during evening. Blossoms three to four inches across, usually yellow or white, and very freely and constantly produced.

E. ENOTHERA LAMARCKIANA.

Enothera acaulis alba, of prostrate habit, the leaves lying on the ground; produces an abundance of large, white flowers about three inches across.

Hardy perennial; six inches high.....10

“ **Drummondii**, low growing, much branched plants, bearing large lemon yellow flowers in the greatest profusion throughout the season. This species has the great advantage of having its flowers remain open a part of the day as well as through the evening and night. One of the best of this class of plants. Hardy perennial; one foot high.....10

“ **Lamarckiana**, superb spikes of large, bright yellow blossoms about four inches across. Hardy biennial, but blooms the first year; height four feet.... 5

“ **gigantea**, the stem grows very tall, changing at about two-thirds its height into an immense spike of bright yellow flowers. Very showy. Hardy biennial, but flowers the first year; height three feet.10

PRIMULA SINENSIS—(Chinese Primrose).

These are perhaps the most desirable of all house blooming plants. They are in almost constant bloom all winter, and if the plants be transferred to the border, they will bloom nearly all summer. Though perennial new plants flower more freely, and seed should be sown every year.

PRIMULA SINENSIS.

- Primula Sinensis fimbriata, scarlet, extra.....25
- “ sinensis fimbriata, rose, rose varieties mixed.....25
- “ sinensis fimbriata, Village Maid, pure white.....25

- Primula sinensis fimbriata alba maxima, flowers large, finely fringed, pure white, extra.....50
- “ sinensis fimbriata cerulea, new, distinct, flowers blue (a color hitherto unattained in the primrose), large. A novelty of the highest merit.....50
- “ sinensis fimbriata punctata elegantissima, the darkest primula known; flowers velvety crimson, fringed and spotted on the edge with white.....50
- “ sinensis fimbriata filicifolia, choicest fern leaved, mixed, dark carmine and pure white.....25
- “ sinensis fimbriata, choicest mixed, from choicest of best fringed varieties, all colors mixed.....25

DOUBLE VARIETIES.

The following four varieties can be relied upon to come true from seed. They are very choice, and highly recommended for Florists.

- Primula sinensis fimbriata, double, crimson.....50
- “ “ “ “ white.....50
- “ “ “ “ red.....50
- “ “ “ “ mixed.....50
- “ **Japonica**, mixed, the beautiful, large, various colored flowers stand in whorls, pyramidally arranged on stout flower stems; one foot high.....25

It is sometimes difficult to get *Primula Japonica* to germinate. After sowing the seed let the plants remain in a cool and moist place for four or five weeks, then place them in a frame or house where there is bottom heat, and the seed will grow freely.

PYRETHRUM—(Feverfew).

(Also see *Matricaria*.)

Very useful and universally admired, ornamental foliated bedding plants. Sow from December to April, in shallow boxes, in a temperature of 60°. As soon as the young plants can be handled, transplant singly into small pots or shallow boxes, where they may remain until the time of planting out into the open ground in May,

PYRETHRUM, GOLDEN FEATHER.

- Pyrethrum parthenifolium aureum** (Golden Feather) beautiful, gold leaved bedding plant. Flowers white; height one foot.....10
- “ **parthenifolium aureum selaginoides**, has finely cut, fern like leaves of bright golden yellow color. Extra fine for bedding. Height one foot. Half hardy.....10

Pyrethrum roseum.—From the dried and powdered flowers of this is made the famous insecticide, *Persian Insect Powder*. Flowers large, yellow and rose colored; handsome. Hardy perennial; height two feet. Per pkt. 10c; oz. \$1.00.

CULTURE.—Sow in boxes of prepared soil, as early as the season will permit, and transplant to sixteen inches apart whenever the plants are large enough. The largest crop of flowers is produced the second season. They should be gathered when in full bloom, dried carefully, and stored in paper bags. Before using, the flowers should be powdered as fine as possible.

QUAKING GRASS.—(See Briza.)

RHODANTHE—(Everlasting).

The finest and most beautiful of all the many varieties of everlastings. Flowers of various colors, pure silvery white with yellow disc, rosy crimson and bright purple, rose

suffused with white, etc. For winter bouquets, the blossoms should be gathered before fully expanded, and if dried in the shade will retain their brilliancy for years. Tender annual; one foot high.

- Rhodanthe Manglesi, rich rose and white color.....10
- “ Manglesi, double, a curiosity; produces ten to fifteen per cent. of double blossoms.....25
- “ maculata, rosy crimson, bright purple or white with golden center.....10
- “ maculata alba, pure white, with yellow disc.....10
- “ mixed.....10

RICINUS—(See Castor Bean).

ROCKET—(Hesperis).

The Sweet Rocket produces clusters of flowers which are very fragrant during the evening. The seed readily germinates in the open ground with very little care. Hardy perennial; one and a-half feet high.

- Rocket, Sweet, purple..... 5
- “ “ white..... 5

ROSE CAMPION—(See Agrostemma Coronaria).

ROSE OF HEAVEN—(See Agrostemma Coeli-rosa).

SALPIGLOSSIS.

Very showy bedding or border plants, with richly colored, erect, funnel shaped flowers. The colors are beautifully marbled and penciled, purple, scarlet, crimson, yellow, buff, blue, and almost black. Bloom from August to October. Half-hardy annual; one and a-half to two feet high.

- Salpiglossis, large flowered hybrids, extra fine mixed; purple, scarlet, crimson, yellow and blue.....10

SALVIA—(Flowering Sage).

Very ornamental; flowers borne in spikes of fiery red, crimson or blue, and continue in bloom in open ground until after severe frosts. Start in heat and transplant into light soil one to two feet apart.

- Salvia Roemeriana, deep crimson; tender annual, one foot high.....10

The following are half-hardy perennials, but bloom the first season; two to three feet high.

- Salvia splendens compacta, Bruantii of Florists, the finest Salvia grown, being literally covered with brilliant scarlet blossoms. We cannot see that the Ingenieur Clavenad, introduced lately with so much clamor, differs in any respect from this variety.....15
- “ patens, the brightest and purest blue color among flowering plants..... 20

SANVITALIA.

Very pretty, dwarf, trailing plants, excellent for rock work, borders or edging of beds. It is so completely covered with flowers as to nearly hide the foliage. Flowers double, of a brilliant golden yellow, resembling a miniature double Zinnia. Hardy annual; six inches high.

SANVITALIA.

- Sanvitalia procumbens fl. pl.....10

SCABIOUS—(See Mourning Bride).

SCARLET FLAX—(See Linum).

SEDUM.

A species of low, succulent plants, some of which are remarkably pretty; are adapted for the center of hanging baskets.

- Sedum cœruleum, common Blue Sedum, known as Blue Stonecrop. Hardy annual; six inches high.....10

SENSITIVE PLANT—(Mimosa).

An interesting and curious plant, with globular heads of pink flowers, well known for the extreme irritability of its leaves and foot stalks, which close and droop at the slightest touch, or in cloudy, damp weather, and during the night. Tender annual; height one and a-half feet.

SENSITIVE PLANT.

- Mimosa pudica..... 5

SMILAX.

No twining plant in cultivation surpasses this for the graceful beauty of its foliage. Indispensable to florists; its hard texture enables it to be kept several days after being cut, without wilting. The seed germinates very slowly, sometimes requiring three or four months. Tender perennial climber; ten feet high.

- Myrsiphyllum asparagoides (Smilax).....15

SNAPDRAGON—(Antirrhinum).

An old border plant, with dark and glossy leaves, and large, curiously shaped flowers with finely marked throats. They have been much improved of late years by careful selection. They blossom the first season from seed sown in spring. Tender perennial; one and one-half to two feet high.

SNAPDRAGON.

- Antirrhinum majus album, pure white..... 5
- “ majus, brilliant, crimson, white throat..... 5
- “ Delila, white throat..... 5
- “ fine mixed, all the best colors..... 5

SOLANUM.

Ornamental fruit bearing plants, useful for conservatory or drawing room decoration. The foliage is handsome and the fruit is attractive in appearance, but not edible.

- Solanum pseudo capsicum, covered with a profusion of miniature, pepper shaped, scarlet fruit.....10

STIPA—(See Feather Grass).

STOCK.

The Stock as now grown is indispensable where a fine display of flowers is wanted. To such perfection has selection brought them, that good seed will give a large proportion of flowers as double and as large as the named sorts grown from cuttings.

- Stock, double German Ten Weeks, mixed, fine.....10
- Stock, dwarf German Ten Weeks, pure white, large flowering.....15

INTERMEDIATE OR AUTUMNAL.

The intermediate stocks, if sown at the same time as the "Ten Weeks," will succeed them in bloom, thus affording flowers continuously until late in the fall. If sown in pots, late in the summer, they will bloom the following spring.

- Stock, Intermediate, white..... 15
- " " scarlet..... 15

BROMPTON AND EMPEROR.

These Stocks should have the same treatment as the intermediate. They cannot endure our winters unless protected.

Stock, Brompton.

- Stock, Brompton, mixed, blooms well in winter. Half hardy biennial; one and a-half feet high..... 10
- " Emperor, or Perpetual, mixed, the fine spikes of bloom are rich and attractive. Tender perennial; one and a-half feet high..... 15

SUMMER CYPRESS—(See Belvidere).

SUNFLOWER—(Helianthus).

Adapted by its stately growth for a background to a lawn, or a screen to hide unsightly places. The seed is used for feed and oil. Hardy annual; five feet high.

SUNFLOWER, DOUBLE.

- Sunflower, double (Helianthus Californicus fl. pl.).. 5
- " Large Russian, tall growing, single variety, often ten to fifteen feet high; the stalks are sometimes used for fuel..... 5

SWAN RIVER DAISY—(See Brachycome).

SWEET PEAS.

(Lathyrus Odoratus.)

Few flowers are more deservedly popular than these showy, free flowering annuals. The purity and brilliancy of their coloring and their peculiar and graceful form make them universal favorites.

CULTURE.—Sweet Peas should be sown in drills, as early as possible in spring, in rich, friable soil. Prepare the bed thoroughly working in a quantity of well rotted manure, if it can be done. Make a trench six inches deep. In this sow the seed and cover two inches deep. As soon as the plants begin to show through, fill in the trench. This will secure a deep planting without the bad effect of deep covering of the seed at first, and so enable the plant to bloom continuously through the heat of summer. As fast as the flowers come into full bloom or fade, they should be cut off, for if the pods are allowed to form, the plants will stop blooming.

MISS BLANCHE FERRY.

The unprecedentedly large and unabated demand for this charming and extremely useful variety fully confirms all the claims we have ever made for it. Its dwarfness, hardiness and early flowering habit make it extremely desirable for both out and in-door planting. For freedom of bloom, size and brilliancy of coloring of the flowers and length of flower stems this variety cannot be surpassed. Planted in small lots or in masses in large beds, nothing can exceed the richness and beauty of their appearance, or their far reaching fragrance. Color, standard brightest pink, wings and keel white.

Sweet Pea, Miss Blanche Ferry, packet 5 cents; twelve packets 50 cents; ounce 40 cents.

OTHER NEW AND STANDARD SWEET PEAS.

- Boreatton, new, particularly handsome, large flowers of a rich, glossy chestnut color; elegant..... 10
- Indigo King, a strong growing and very prolific sort, bearing a profusion of large flowers with dark maroon standard and clear indigo blue wings. Very handsome..... 10

Splendour. A new and beautiful variety, the flowers shading from dark crimson to rose-pink. Awarded a first class certificate by the Royal Horticultural Society.....10

Butterfly. New and ranks among the very best of this unrivalled class of plants. Very floriferous, color lavender blue, shading into white on the lower petals.....10

Lottie Eckford. New and a free bloomer; color, lavender, shaded with pink and white. Very handsome.....10

Princess Beatrice, a vigorous grower and free bloomer; flowers a clear and beautiful carmine-rose, slightly shaded; one of the best.....10

Queen of the Isles, scarlet mottled, and flaked with purple and white.....10

Adonis, carmine-rose, shaded with white, very desirable.....10

Eckford's Hybrids. This is mixed seed from the many beautiful hybrids produced by this celebrated grower. It will produce a large range of colors; the flowers are quite uniformly of fine form and substance.....10

Invincible Scarlet, plant vigorous; flowers of intense and brilliant scarlet-pink, of the largest size; the most brilliant variety yet produced.....5

“ **Black,** the darkest variety yet sent out and desirable on account of its intense color.....5

“ **White,** the stock we offer produces very large flowers of fine form and clear white color.....5

Striped.....5

Painted Lady.....5

Mixed, includes all the new sorts, extra.....5

Collection, one each of fifteen kinds named above, including Miss Blanche Ferry.....1.00

SWEET SULTAN—(Centaurea).

Produce a striking effect in mixed borders, and are useful for forming bouquets of cut flowers in connection with other colored flowers. Hardy annual; two feet high.

Centaurea moschata atropurpurea, double purple.... 5

SWEET WILLIAM—(Dianthus Barbatus).

For display in the garden the Sweet William is unsurpassed. The seed can be planted very early in the spring, in open ground, and will blossom the following summer; or it can be sown in August, and will make fine blooming plants for spring. Hardy perennial; one and a-half feet high.

Dianthus Barbatus, pure white, pure white flowers.....10

“ “ **black, reddish, velvety black**.....10

“ “ **fine mixed**.....5

“ “ **mixed double, many colors**.....10

TAGETES—(See Marigold).

TASSEL FLOWER—(Cacalia).

A showy plant of easy culture, producing beautiful scarlet and golden yellow, tassel shaped blossoms, from July to October. It is sometimes known as Flora's Paint Brush. Hardy annual; one and a-half feet high.

Cacalia coccinea, scarlet.....5

“ **aura, golden yellow**.....5

“ **mixed**.....5

TORENIA.

A fine annual, with large sky blue blossoms, with three spots of dark indigo blue, and a yellow stain in the center. Extremely handsome grown in pots or shaded border.

Torenia Fournieri superbienis, the darkest spotted varieties.....10

TREE CYPRESS—(Ipomopsis).

A handsome plant, with fine, feathery foliage, somewhat like that of the cypress vine, and with long spikes of beautiful flowers; equally desirable for out-door or conservatory cultivation. Half hardy biennial; three feet high.

Ipomopsis elegans, mixed.....5

TRITOMA.

A half hardy, summer and autumn blooming perennial, producing magnificent spikes of orange-red flowers.

Tritoma uvaria grandiflora.....25

TROPÆOLUM LOBBIANUM—(See Nasturtium, Tall).

TROPÆOLUM MINOR—(See Nasturtium, Dwarf).

TROPÆOLUM PEREGRINUM—(See Canary Bird, Flower.)

VALERIAN—(Polemonium).

An old, standard border plant, often called Jacob's Ladder, from its pinnately cleft leaves. Flowers blue, nodding at the ends of upright stalks. It blooms in June, is of easy cultivation and perfectly hardy. Perennial; two feet high.

Valerian, Greek (Polemonium coreruleum).....5

VALERIAN, GREEK.

VERBENA.

No plant is more generally cultivated, or more eagerly sought after than the Verbena, and no plant excels it for masses in beds on the lawn. In the varieties may be found every color except yellow. If sown in open ground in May, they will bloom in August, but if started in the house, in pots, in winter, they will be in bloom sooner. Half hardy perennial trailer; one foot high.

Verbena aubletia grandiflora, reddish-purple..... 5

“ **niveni**, white; sweet scented.....10

“ **Venosa**, rich purple.....5

“ **Montana**, hardy, from Rocky Mountains, will stand our winters out of doors; rose, changing into lilac.....10

“ **hybrida, scarlet**, scarlet blossoms.....15

“ “ **Defiance**, seed may be relied upon to produce the true, deep scarlet color.....20

“ “ **blue**, all shades of blue.....15

“ “ **Italian striped**, beautiful.....20

“ “ **auriculæflora**, various shades, all with distinct eye of white or rose.....20

“ “ **maxima perfecta alba**, produces large, pure white flowers; fine for florists; comes true from seed.....25

“ “ **compacta, mixed**, distinct. The plant forms a compact bush about five inches high and eighteen across, covered throughout the season with large trusses of white, scarlet and violet flowers.....25

“ **mammoth mixed**, of our own growing, embracing a wide range of colors. This will please all who give it a trial.....25

“ **extra choice mixed**, very choice.....20

“ **fine mixed**, embraces all colors.....10

“ **mixed**.....5

VINCA—(Periwinkle).

A genus of ornamental, free flowering green-house perennials, with glossy green foliage and handsome flowers. May be planted in warm, sunny border during summer. Two feet high.

Vinca rosea, rose.....10

“ “ **alba, white, with crimson eye**.....10

“ “ **nova species, pure white**.....10

VIOLA TRICOLOR—(See Pansy).

VIOLET—(Viola).

Well known free flowering hardy perennials, easily grown from seed. Succeed best in a partially shaded moist situation. Height six inches.

Violet, Sweet Scented (Viola odorata semperflor-ens), flowers blue; fragrant.....10

“ **white (Viola cornuta alba)**, large, white blossoms.....10

“ **Viola lutea grandiflora**, large yellow flowers.....10

“ **Mauve Queen**, mauve colored.....10

“ **Purple Queen**, deep, fine purple.....10

VIRGINIA CREEPER—(See Ampelopsis).

VIRGINIA STOCK—(Malcolmia).

Hardy annuals, very useful for border or edging. A continual succession of blossoms may be kept up the whole season by sowing at intervals through the spring and summer. The flower and plant are quite as desirable as the Candytuft; grows about nine inches high.

Virginia Stock, red and white mixed.....5

WALL FLOWER—(Cheiranthus Cheiri).

The large, massive spikes of the wall flower are very conspicuous in beds and borders, and are very useful in making bouquets. Sow the seed early in hot-beds, and while the plants are small, prick them out into pots, and sink the pots in the earth. On approach of cold weather remove the

pots to the house, and they will bloom all winter. Tender perennial; one and a-half feet high.
Wall Flower, mixed double.....10
 " **Early Brown**, brownish red, fragrant flowers; large thick spikes; early. Tender biennial.....10
 " **Tom Thumb, Golden**, free flowering, of dwarf and compact habit; recommended for spring bedding...15

WHITLAVIA.

A plant with delicate, handsome foliage, producing a constant succession of bright blue and pure white bell shaped flowers, in drooping clusters half an inch in length. Hardy annual; one foot high.
Whitlavia grandiflora..... 5

WIGANDIA.

Very ornamental plants with immense veined leaves and stems covered with crimson hair. It grows rapidly, and should be formed into a bush. Its large leaves and clusters of lilac flowers, which continue to open in succession for a long time, lend the plant a tropical aspect, and make it valuable for garden and lawn decoration.
Wigandia caracasana.....25

WISTARIA.

One of the most beautiful and rapid growing of hardy climbers. Frequently blooms both in spring and fall; the pale blue pea shaped flowers are borne in long, drooping clusters similar in size and shape to a bunch of grapes. It thrives best in a light, rich soil.
Wistaria magnifica.....20

XERANTHEMUM.

Of compact habit, free flowering, and of the easiest cultivation. The leaves are covered with a silvery down, and the flowers are pure white, deep purple and yellow, single and double. If gathered before fully opened, and dried in the

shade, they will retain their beauty for years. **Hardy annual;** one foot high.
Xeranthemum, mixed.....10

ZEA MAIZE—(Striped Japanese Corn).

A variety of corn with ornamental foliage; leaves striped green and white. Half-hardy annual; six feet high.
Zea Japonica fol. variegatis, striped foliage..... 5

ZINNIA.

A very showy plant, with large, double flowers, which, when fully expanded, form hemispherical heads, become densely imbricated, and might easily be mistaken for dwarf dahlias. Half-hardy annual; one and a-half feet high.

- Zinnia, double, yellow**.....10
- " " **scarlet**.....10
- " " **purple**.....10
- " " **violet**.....10
- " " **orange**.....10
- " " **white**.....10
- " " **deep purple**.....10
- " " **dark violet**.....10
- " " **alba plenissima**, pure white.....10
- " " **choice mixed**, very fine.....10
- " " **striped, or zebra**, flowers striped and mottled with various colors. *Mixed*.....15
- " " **mixed**..... 5
- " **Haageana fl. pl.**, a dwarf variety with small, very double flowers of a deep orange color; fine for cut flowers; height one foot.....10
- " **Pompon, double, mixed**, a new strain of this popular flower in which all the colors peculiar to the Zinnia are found. The flowers are about half the size of the ordinary Zinnia; very double.....15
- " **Darwini fl. pl.**, a distinct and handsome class, comprising *nana compacta*, *major*, *pyramidalis* and *vitata*. The seed we offer is a mixture of each of the above.....20

CHOICE FLOWER SEEDS IN BULK.

For such of our customers as make extensive sowings of Flower Seeds, and for Florists who require larger quantities of Flower Seeds than are usually sold in packets, we offer some of the leading sorts by weight. This list embraces the most desirable kinds for bedding, edging and ornamental planting. Those who plant largely will find this a very economical mode of securing their seeds. We send free by mail, at prices annexed, but no discount or premiums can be allowed on Flower Seeds by weight. Half ounces will not be supplied of such kinds as sell for less than 50 cents per ounce.

BULBS FOR SUMMER AND AUTUMN BLOOMING.

The following Bulbs will be sent by mail or express, charges prepaid, when ordered at single or dozen rates; at the 100 rate they will be sent by express or freight, the purchaser paying the charges. No less than six will be sent at the dozen rate; no less than 50 at the 100 rate. Orders, with money, should be forwarded as early as possible, and they will be filled in rotation. The tender Bulbs that are injured by frost will not be sent until such danger is over in the spring.

DAHLIA.

The Dahlia has always been a favorite for autumn flowering. The flowers are so symmetrical and perfect, and the range of colors so large and varied that they will always be popular where display is wanted. The roots are tender and easily injured by frost. They should be set out three feet apart, after all danger of frost is over, and during winter placed in a cool cellar, and not allowed to freeze. The plants should be supported by tying to stakes. Our collection of mixed dahlias, both double and single, is of the best, comprising all the positive colors, with their most striking shades. Ready for shipment about April 1st.

DAHLIA, DOUBLE.

DIELYTRA—(Bleeding Heart).

Tuberous rooted plants, blooming in the spring, favorably known almost everywhere. They require only the ordinary culture of border plants. Roots planted in spring or autumn will flower freely. The roots should be divided every third year. The flowers are delicate pink, very graceful, produced continuously from May till July. Ready for shipment about April 1st.

Dielytra spectabilis.....each, 25; per doz., 2 50

GLADIOLUS.

No flower has gained more rapidly in public favor; this could not well be otherwise, for in addition to the great intrinsic merit of the flower, it is *easy of cultivation, and blooms the first season*. The culture is very simple. They thrive in almost any good soil, except a stiff clay, require full sunlight, and are only liable to injury from rank manure. Plant the roots six to nine inches apart, the large ones four inches and the small ones two inches deep. Make an early planting of the smallest roots first as soon as the ground is sufficiently dry and warm, and continue to plant at intervals of two weeks during the spring and early summer. In this way a succession of bloom may be had from midsummer until frost. In autumn, before freezing, they should be dug and dried, the earth and old roots removed, and then stored in a cool dry place, secure from frost until spring.

GLADIOLI.

LEMOINE'S HYBRID GLADIOLI.

Large Stained or Butterfly.

A new and distinct race of this matchless class of plants, characterized by the variety and strength of color of their flowers. The flowers tall remarkably well, while they attain a size heretofore unthought of among Gladioli. No collection would be complete without these, any more than would a collection of Cannas without Crozy's Hybrids as a part of it. We have included in this list such varieties only as have been thoroughly tested and are known to possess decided merit.

	EACH.	DOZ.
<i>Enfant de Nancy</i> , purplish-red, lower petals deep crimson. Color and blotching heretofore entirely unknown in Gladioli.....	25	2 50
<i>Incendiary</i> . Flowers very large, vermilion, rose colored throat, two lower petals scarlet purple.....	25	2 50
<i>Lafayette</i> . Flowers large, yellowish salmon, large crimson blotches on lower petals.....	25	2 50
<i>Marie Lemoine</i> . Long spike of fine, well expanded flowers, upper divisions of a pale cream color, flushed salmon-lilac, lower divisions spotted purplish violet, bordered deep yellow.....	25	2 50
<i>Talma</i> . Pale lilac, lower divisions violet-brown.....	25	2 50

	EACH.	DOZ.
<i>W. E. Gumbleton</i> , Flowers large and open, purplish-rose, streaked with deep carmine, spots velvet, surrounded with yellow, unusually beautiful.....	25	2 50

CHOICE NAMED GLADIOLI.

The following named varieties are selected with special reference to beauty of flower, range of color and habit of plant. There is not one in the list that is not desirable. Ready for shipment about April 1st.

	EACH.	DOZ.
<i>Adanson</i> , rose-tinged lilac, large blotch on white ground, tinged yellow, edged with carmine flushed lilac.....	20	2 00
<i>Angele</i> , white, showy and effective.....	15	1 50
<i>Brenchleyensis</i> , rich, dark, scarlet, very brilliant....	10	1 00
<i>Cameleon</i> , large, slaty lilac.....	20	2 00
<i>Ceres</i> , pure white, flamed lilac, desirable.....	15	1 50
<i>Crystal Palace</i> , long spike of pure white flowers, lower petals striped with purplish-violet.....	20	2 00
<i>Eugene Scribe</i> , tender rose, blazed with carmine-red, beautiful.....	15	1 50
<i>Felicien David</i> , cherry, light carmine feathered, white blotch.....	15	1 50
<i>Isaac Buchanan</i> , one of the best yellow sorts yet introduced.....	25	2 50
<i>John Bull</i> , white, tinged with sulphur.....	10	1 00
<i>La Candeur</i> , white, lightly striped with carmine-violet, perfection.....	30	3 00
<i>Lamarck</i> , cherry colored, slightly tinted with orange, blazed with red, center very well lighted, very large, white stain.....	20	2 00
<i>Laura</i> , orange-red, flamed carmine, pure white blotch.....	10	1 00
<i>Le Poussin</i> , light red-white blotch, handsome.....	15	1 50
<i>Le Titien</i> , rosy scarlet, very brilliant.....	20	2 00
<i>Lord Byron</i> , brilliant scarlet, blotched and flaked pure white.....	15	1 50
<i>Madame Monneret</i> , rose, white stripe and carmine blotch.....	10	1 00
<i>Marie Dumortier</i> , white, slightly streaked with rose, violet-purple blotch.....	15	1 50
<i>Martha Washington</i> , pure, light yellow, lower petals slightly tinged with rose; stately and beautiful....	30	3 00
<i>Mons. Legouve</i> , fiery red, white blotch, white line in each petal.....	25	2 50
<i>Meyerbeer</i> , brilliant scarlet, blazed with vermilion, very fine spike.....	20	2 00
<i>Napoleon III</i> , bright scarlet, the center of the petals white striped, extra fine.....	15	1 50
<i>Norma</i> , pure white, sometimes tinted with pale lilac	25	2 50
<i>Ophir</i> , dark yellow, purple blotch.....	20	2 00
<i>Penelope</i> , white, slightly tinged pink.....	15	1 50
<i>Pepita</i> , bright golden yellow, slightly striped carmine. The most free flowering yellow.....	25	2 50
<i>Phobus</i> , brilliant red, with a large white stain.....	25	2 50
<i>Princess of Wales</i> , white, flaked carmine.....	10	1 00
<i>Robert Fortune</i> , orange-lake, shading off to purple-crimson, veined white.....	20	2 00
<i>Shakespeare</i> , white or blush-white, blazed with rosy carmine, large, rose colored stain.....	25	2 50
<i>Snow White</i> , new, very fine.....	50	
<i>Sultana</i> , bright satin rose, flamed with carmine; purple-carmine blotch on white ground. Choice	25	2 50
<i>Van Dyck</i> , crimson-amaranth, striped with white....	15	1 50

MIXED GLADIOLI.

These mixtures must not be compared nor confounded with the common mixed sorts, often the refuse of cheap, unsalable kinds. They are composed only of selected named varieties, representing over one hundred and fifty of the best sorts. We recommend this stock with perfect confidence.

Choice Mixed , all colors, including striped and blotched kinds.....	75	3 50

LILIUM.

The Lily has been, with eminent propriety, styled the "Queen of Flowers," and truly no flower conveys so adequate an idea of queenly beauty, majestic grandeur and faultless purity as the lily. Nearly every variety will withstand the severity of our winters, and many are among the most hardy of our garden flowers. Their culture is simple, and with a little care failure is impossible. The bulbs should be planted in spring as soon as the frost is out of the ground until first of May—the earlier the better. Select a well drained spot, dig the soil deep, and make it fine, enriching it

abundantly with very rotten cow manure and adding a liberal mixture of sand. Set the bulbs from three to five inches deep, according to size. During the winter it is advisable to cover the surface of the bed with a thin layer of manure, which will not only afford a slight protection to the bulbs, but will materially enrich the soil. In spring the manure may be removed or dug in between the rows. Care should be taken that they have proper drainage, no water being allowed to stand around the roots. Once firmly established, they should not be disturbed oftener than once in five years. To produce extra fine specimens, plant the bulbs in small pots (4-5 inches) early in spring, and raise them in the greenhouse or house.

JACOBÆAN LILY.

	EACH.	DOZ.
<i>Auratum</i> , golden Japan lily, large bulbs.....	30	3 00
<i>Brownii</i> , magnificent, large, white inside, purple outside.....	1	75
<i>Batemanni</i> , a beautiful, upright growing apricot-colored variety.....	30	3 00

" " " " <i>roseum</i> , rose spotted Japan lily.....	25	2 50
" " " " " <i>rubrum</i> , white and red spotted.....	25	2 50
<i>Chalcedonicum</i> , brilliant scarlet, recurved blossoms.....	100	10 00
<i>Longiflorum</i> , pure white, very fragrant.....	20	2 00
<i>Tigrinum</i> (Tiger Lily), orange, spotted black.....	15	1 50
" " " " " <i>flore pleno</i> , (Double Tiger Lily), extra large bulbs, giving from twenty to thirty flowers.....	25	2 50
<i>Jacobean</i> (Amarylilid Formosissima), deep scarlet.....	20	2 00

MADEIRA VINE—(Boussingaultia baselloides).

Tuberous rooted climber, with glossy, green leaves, and delightfully fragrant, white blossoms. Sometimes called "Mignonette Vine." It is of rapid growth, and from a few tubers vines will be produced sufficient to cover one side of a cottage in a single season. The tubers are tender and must be protected from frost during winter.

	EACH.	DOZ.
Madeira Vine, tubers	10	75

TRITOMA.

Sometimes called "Red Hot Poker." It is really a fine plant, pretty, hardy, though requiring some protection through winter. The flowers are produced in large spikes of rich, orange-red tinted flower tubes. Plant two feet apart, and in November cut the plants back near the ground, and cover the bulbs with dry litter, which remove in the spring.

	EACH.	DOZ.
Tritoma uvaria	30	3 00

TUBEROSE.

The flowers of this well known and popular plant are waxy white, double, and so fragrant as to perfume the whole atmosphere for some distance around. They are useful for forming button-hole bouquets, in large bouquets, or as single specimens. Each bulb flowers but once, but the smaller bulbs can be set out for future flowering when their growth is completed. A good way to grow Tuberoses is to fill five-inch pots half full of cow manure, and the remainder with good, rich earth, mixed with sand. Plant the bulbs in this in April, water moderately, and hasten growth by putting in a warm, light place. When weather has become warm, plunge the pots in the earth out of doors. They will usually flower before cold weather in autumn; if they do not the pots can be brought in, and they will bloom in the house. The bulbs cannot be safely sent by mail before April 1st.

ALL FLOWERING BULBS.

	EACH.	DOZ.	100.
<i>Double White</i> , tall.....	10	75	3 50
<i>Pearl</i> , double dwarf white.....	10	75	4 00

About September 1st next we will issue our Annual Catalogue of CHOICE DUTCH BULBS AND SEEDS FOR FALL PLANTING. It will be sent free to all customers without ordering it, and to others who apply for it.

MUSHROOMS, HOW TO GROW THEM.—This is a practical treatise on Mushroom culture for profit and for pleasure by William Falconer. It embodies the experience of the author regarding the best methods of making this fascinating occupation a success. He also visited many of the largest growers in this country and in Europe, and included such of their practices as seemed best adapted to general conditions in the body of the book. The closing chapter is devoted to How to Cook this most delicious vegetable after you get it. Printed on excellent paper and fully illustrated. **Price, postpaid, \$1.50.**

FARMING WITH GREEN MANURES ON PLUMGROVE FARM, by C. HARLAN.—The writer is an enthusiast on the subject of this increasingly popular method of enriching worn out, or maintaining the fertility of already good land. Every land owner should have this book, as it deals in a masterly manner with a vitally important subject. **Price, postpaid, \$1.00**

CELERY GROWING AND MARKETING A SUCCESS, by H. L. STEWART, Tecumseh, Mich. Mr. Stewart is one of the pioneers in celery growing in Michigan and is also one of the most successful. This book is brimful of just the kind of information every celery grower needs. It describes clearly and fully how to grow, harvest and market it in the most profitable and economical manner. It also contains several illustrations of useful tools for use in cultivating or handling the crop. These were contrived by the author, are unpatented and may be made by anyone. **Price, postpaid, \$1.50.**

INSECTS AND INSECTICIDES, by CLARENCE M. WEED.—This is a practical manual on noxious insects and the methods of preventing their injuries, and is without doubt the best book on the subject, as it contains all the information of practical use down to date on the best methods of dealing with the ever increasing list of insect foes with which the farmer and gardener has to deal. **Price, postpaid, \$1.25.**

THE FAMILY HORSE, by GEO. A. MARTIN.—A book of the greatest value to every horse owner, as it deals with the care, feeding and management of the horse while in active use and if its suggestions and directions are even partially heeded, our "most faithful friend" will be relieved of a vast amount of unnecessary suffering, and will have many years of usefulness added to its life. **Price, postpaid, \$1.00.**

THE PEOPLE'S HORSE, CATTLE SHEEP AND SWINE DOCTOR, by WM. H. CLARKE.—The book is divided into four parts and contains clear and concise descriptions of the diseases of the respective animals with exact doses for each. The highest, best and latest authorities have been followed in the preparation of this work and it is altogether admirably fitted for what it was written for, the people's use. **Price, postpaid, \$1.00.**

ORNAMENTAL GARDENING FOR AMERICANS, by ELIAS A. LONG.—Mr. Long, the well known editor of the *American Garden* and formerly of *Popular Gardening*, has given his best thought to the preparation of this comprehensive and useful treatise on Ornamental Gardening. We know of no work that offers so much and so reliable information on the materials for and the arrangement and construction of ornamental gardens and lawns. **Price, postpaid, \$2.00**

TERMS.

Our Terms are Strictly Cash with the Order.

FREE OF POSTAGE OR EXPRESS CHARGES.—Where **Packets, Ounces, Two Ounces, Quarter Pounds,** or **Pounds** are ordered at list prices, they will be sent free by mail or express.

PINTS AND QUARTS.—Where **Pints, Quarts** and **Four Quarts** are ordered at list prices, **fifteen cents per quart, ten cents per pint** must be added for postage or express charges, and they will then be sent free.

PECK, BUSHEL AND BARREL LOTS.—Where **Peck, Bushel** or **Barrel** lots are ordered the freight or express charges must be paid by the party ordering.

In those cases where perishable or other goods are ordered to be sent by freight or express to such great distances that the cost of transportation will nearly or quite equal the value of the goods, we must decline to forward goods unless purchasers remit us, in addition to the price of goods, sufficient funds to prepay transportation charges. When this requirement is not complied with, we reserve the right of declining the order and returning money to the person ordering.

SEEDS BY MEASURE.—**One-fourth bushel** and over sold at **bushel rates**; **Four Quarts** and over, up to one-quarter bushel sold at **four-quart rates**; less than **Four Quarts** sold at **quart, or pint rates**.

SEEDS BY WEIGHT.—**Half Pound** and over at **pound rates**; less than **Half Pound** lots are charged at **ounce, two-ounce** or **quarter-pound rates**.

BAGS.—To every order for one-quarter bushel and upwards, to the amount of two bushels, **20 cents** must be added for a new bag in which to ship.

WE DO NOT SEND C. O. D., as the cost of collecting return charges is quite an unnecessary item of expense; and the prices being given, we can conceive of no necessity to warrant goods being so sent.

HOW TO SEND MONEY.—Remittances may be made **AT OUR RISK** by either of the following methods, viz: **Postoffice Order, Draft on New York, Express Co's Money Order, or by Registered Letter.**

The rates charged for Postoffice Orders and Express Money Orders are now so low that this is the very best way to remit where they can be obtained. We will bear the expense of sending money in either of these ways. Deduct the cost of the order from amount sent. We desire to call particular attention to the fact that Express Money Orders can be obtained at **ALL** offices of the following Express Companies: **American, United States, Wells, Fargo & Co., and Northern Pacific.** They are **cheap and absolutely safe.**

Postal Notes afford a cheap and convenient mode of remitting small sums, but without security, because they are payable to bearer. We cannot be responsible for money sent in this way.

When Money Orders cannot be obtained, letters containing money should always be registered. Money in ordinary letters is *unsafe*. If currency is sent by express, the charges should be prepaid, and if local checks are used, 25 cents must be added to cover the cost of collection.

SIGN YOUR NAME.—There is hardly a day that we do not receive letters containing money and orders, which we cannot fill, because the sender has **failed to sign his name**. Again, the **P. O. address** is frequently omitted, and the postmark, being blurred, we are unable to fill the order, no matter how much we desire to do so. Use our Order Sheet and Envelope, in all cases where you can, fill out the blank and sign your name, and you will have no cause to censure us.

CLUBS.—We offer the following liberal inducements to Clubs or those wishing to purchase seeds in packets. The seeds will be sent by mail, post-paid; but these low rates apply to **seeds in packets only, and at catalogue prices, and not to seeds by weight or measure.**

Send us \$1.00 and select packets to the value of \$1.15	Send us \$ 5.00 and select packets to the value of \$ 6.15
“ 2.00 “ “ “ “ “ 2.35	“ 10.00 “ “ “ “ “ 12.50
“ 3.00 “ “ “ “ “ 3.60	“ 20.00 “ “ “ “ “ 26.00
“ 4.00 “ “ “ “ “ 4.85	

GUARANTEE.—Complaints made that seeds are not good, should quite as often be attributed to other causes as to the quality of the seeds. There are hundreds of contingencies continually arising to prevent the best seeds always giving satisfaction, such as sowing too deep, too shallow, in too wet or too dry soil; insects of all descriptions destroying the plants as soon as, or before they appear; wet weather, cold weather, frosts, chemical changes in the seeds induced by temperature, etc. For the above reasons, it is impracticable to guarantee seeds under all circumstances, and, *while we exercise the greatest care to supply every article true to name, and of the very best quality, and believe our seeds to be as pure and good as any to be found, we wish it to be distinctly understood that we sell no seeds with any warranty, expressed or implied, and we will not be in any way responsible for the crop.*
